

Recommendation for Storage and Transport:

Storage

1. **Temperature Control:** Store batteries at a recommended temperature range of 5 °C to 25 °C.
Avoid direct sunlight and temperatures above 60 °C or below -20 °C.
2. **Humidity:** Keep batteries in a dry, well-ventilated location. Avoid contact with moisture or condensation.
3. **Short Circuit Protection:** Protect terminals from short circuits, e.g., by using tape or specialized containers.
4. **Defective Batteries:** Store damaged or defective batteries separately in appropriate containers.
5. **Fire Safety:** Provide suitable fire extinguishing agents (e.g., metal fire extinguishers).

Transport

1. **Labeling:** Packaging must include Class 9 hazard labels and the lithium battery label.
2. **Packaging:** Use sturdy packaging that prevents battery movement and short circuits (per ADR Packaging Instruction P903).
3. **Protection from Damage:** Avoid mechanical impacts such as shocks or crushing.
4. **Special Provisions:** Simplified rules apply for smaller batteries (below 100 Wh) under Special Provision 188.
5. **Separation:** Defective or damaged batteries must not be transported together with intact batteries.
