ABB is committed to continually promoting and embedding sustainability across its operations and value chain, aspiring to become a role model for others to follow. With its ABB Purpose, ABB is focusing on reducing harmful emissions, preserving natural resources and championing ethical and humane behavior.

General Information

Reference product	CP-AF20A-NL.
Description of the product	The main function of the conduit system is to protect the cabling of electrical installations. This product falls under the following product category: Cable trunking systems and conduit systems; conduit systems for cable: flexible conduit systems. This product is compliant with standards EN 61386-1 and EN 61386-22.
Functional unit	To accommodate and protect the wiring and wiring accessories along 1 metre for a Reference Service Life of the product of 20 years. The installation trunking system with cross-section 212.52 mm² includes the profile and accessories that are representative of standard use.
Other products covered	Conduit product family. Full list of products covered by this PEP on page 12. All conduits are made of polyamide 6 with the same production process. Conduits vary in diameters, lengths, and color.

Additional Environmental Information

Manufacturing	The manufacturing stage includes the production of conduits from granulate PA6 through extrusion process, as well as the production of packaging, and storage of product. The production occurs at the ABB factory located in Coleshill, GB, which serves as manufacturer's last logistic platform.
Distribution	The transport distance is considered as a weighted average distance from ABB factory in Uster to global customers, which is an average of 132 km by lorry and 878 km by ship. Packaging includes carton and resuable wood pallets.
Installation	During installation, the disposal of packaging, as well as the manufacture, transport, and disposal of 3% scrap of the conduit were considered.
Use	No energy consumption, no maintanence operations needed.
End of life	The default end of life scenario, 100% incineration without energy recovery, with assumption of 100 km transport to end of life scenario, was applied, in accordance with PEP guidelines.
Benefits and loads beyond the system boundaries	Benefits and loads beyond the system boundaries (Module D) have been considered.

Environmental Impacts

Reference lifetime	20 years
Product category	Cable management solutions - cable trunking systems and counduit systems - flexible conduit systems
Installation elements	No installation materials are required in the life cycle of the product.
Use scenario	No material and energy consumption occur during the use stage. No maintenance phase is planned for the conduits.
Geographical representativeness	Datasets used are representative of Europe; good quality geographical representativeness
Technological representativeness	Technological representativeness is of excellent quality, using primary data of energy consumption from manufacturing location.
Software and database used	SimaPro 9.6.0.1 and ecoinvent 3.10
Energy model used	
Manufacturing	Electricity, medium voltage {GB} market for electricity, medium voltage Cut-off, U
Installation	No energy consumption occur during the installation stage
Use	No energy consumption occur during the use stage.
End of life	No energy consumption during the end of life stage.

Extrapolation Factors

For other products covered by this PEP, than the Reference product, the environmental impacts for each phase of the lifecycle are obtained by multiplying the values of a given indicator for the Reference product by the extrapolation factors provided in the tables below, with the following equations:

Manufacturing Stage: $y = r_0 *(a*x + b)$

Where:

- y is the selected environmental indicator;
- r_0 is the environmental indicator of the reference product
- a, b are the extrapolation factors from the table below
- x is the extrapolation variable, and is defined as either m (product mass), p (packaging mass), or t (total mass = m+p)

Environmental indicator	Extrapolation factor (a)	Extrapolation constant (b)	Extrapolation variable (x)
GWP-total	1.54E+01	0.00E+00	product mass

Extrapolation Factors

Extrapolation equations for all other life cycle stages, for all environmental indicators. Here, the extrapolation variables are m (product mass), p (packaging mass), or m + p (total mass), and r0 refers to the reference product environmental impact for a given impact category.

Distribution Stage y = 10.12 * r0 * (m + p)

Installation Stage y = r0 * (10.55*(m + p) + 0.019)

End of Life Stage y = 15.61 * r0 * mBenefits y = 28.73 * r0 * p

There are no extrapolation factors for use stage, as all products in this family have no use phase.

A full list of all the products and the relevant variables for extrapolation is shown on Page 12.

Environmental Impact Indicator Glossary

Impact indicators

Indicator	Description	Distri- bution
Global warming potential (GWP) - total	Indicator of potential global warming caused by emissions to air contributing to the greenhouse effect. The total global warming potential (GWP-total) is the sum of three sub-categories of climate change. GWP-total = GWP-fossil + GWP-biogenic + GWP- land use and land use change	kg CO₂ eq.
Ozone depletion (ODP)	Emissions to air that contribute to the destruction of the stratospheric ozone layer	kg CFC-11 eq.
Acidification of soil and water (A)	Acidification of soils and water caused by the release of certain gases to the atmosphere, such as nitrogen oxides and sulphur oxides	H+ eq.
Eutrophication (E)	Indicator of the contribution to eutrophication of water by the enrichment of the aquatic ecosystem with nutritional elements, e.g. industrial or domestic effluents, agriculture, etc. This indicator is divided to three: freshwater, marine and terrestrial.	kg P eq., kg N eq., mole N eq.
Photochemical ozone creation (POCP)	Indicator of emissions of gases that affect the creation of photochemical ozone in the lower atmosphere (smog) because of the rays of the sun.	kg NMVOC eq.
Depletion of abiotic resources – elements (ADPe)	Indicator of the depletion of natural non-fossil resources	kg Sb eq.
Depletion of abiotic resources – fossil fuels (ADPf)	The use of non-renewable fossil resources in an unsustainable way (e.g. from material to waste)	MJ (lower heating value)
Water Deprivation potential (WDP)	Deprivation-weighted water consumption. Assesses the potential of water deprivation, to either humans or ecosystems, building on the assumption that the less water remaining available per area, the more likely another user will be deprived.	m³ eq. depr.

Resource use indicators

Indicator	Description	Distri- bution
Total use of primary energy	Total use of non-renewable primary energy resources (primary energy and primary energy resources used as raw materials) + Total use of renewable primary energy re-sources (primary energy and primary energy resources used as raw materials)	MJ (lower heating value)
