

## Gold infrared lamps

These lamps are ideal for situations where warmth is required without the glare associated with uncoated ruby lamps. This is made possible by a special dichroic film coating process.

Victory's manufacturing process uses state-of-the-art vacuum deposition technology that enables a dichroic film to be coated onto tubular surfaces.

### Applications

- People heating
- Paint curing

### Product features

- Multi-layer vacuum coated film more accurately controlled than with dip coating
- Constant colour over entire length, and from one batch to the next
- Reduced occurrence of pinholes
- Enhanced stability of the coating over lamp life
- Light colour and output can be tailored to suit different applications
