# BATHROOM

The following information is a guide to help you understand which fittings can be placed where. This is not an installation guide and reference should be made to the **IEE Wiring Regulations** (18th Edition) or a qualified electrician.

Firstly it is important to understand the rating by which bathroom and some outdoor lights are classified.

IP rating stands for "Ingress Protection" and is always followed by two characters. These two numbers refer to the level of protection, and it is important that you choose fittings with the correct rating according to where they are to be sited within the bathroom.

The diagram below shows a bathroom split into three clear zones: 0, 1 & 2.

**Zone 0** is inside the bath or shower itself. Any fitting used in this zone must be low voltage (max 12V) and be rated at least IP67 which is immersion proof.

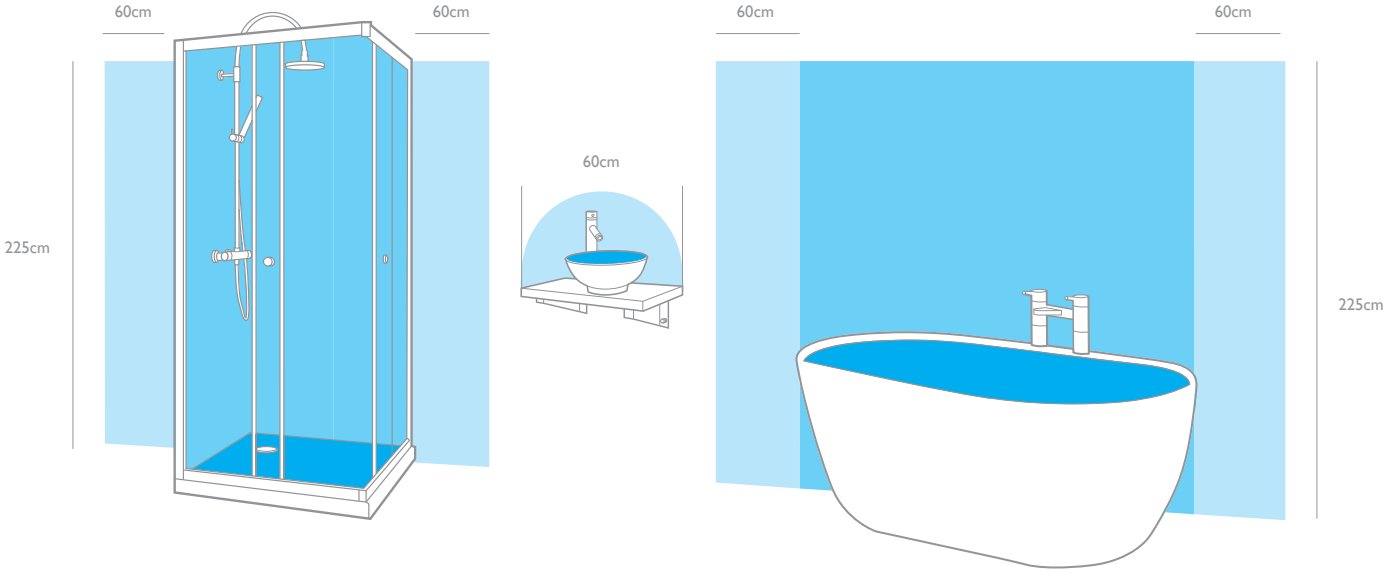

**Zone 1** is the area above the bath to a height of 2.25m from the floor. In this zone a minimum rating of IP44 is required.

**Zone 2** is an area stretching 0.6m outside the perimeter of the bath and to a height of 2.25m* from the floor. In this zone an IP rating of at least IP44 is required.

**The lighting circuit within a bathroom should be protected with a 30ma residual current device (RCD).**

In addition, it is good practice to consider the area around a wash basin, within a 60cm radius of any tap, to be considered as Zone 2.

* In accordance with advice from the Lighting Industry Association the location above Zone 1 (over the bath or shower) up to a ceiling height of 3m continues to be classified as Zone 2.

**0** ZONE

Within the bath or shower tray. All lights fitted within this area must be IP68 rated and low voltage.

**1** ZONE

Above the bath or shower to a height of 2.25m. All lights fitted within this area must be a minimum of IP44 rated. IP44 is suitable where there is no shower head above the bath. IP65 is required if there is a shower head or demountable shower hand fitting in use.

**2** ZONE

0.6m outside of zone 1 and a 60cm radius above washstands. All lights fitted within this area should be a minimum of IP44 unless there is a danger of direct jet spray, in which case an IP65 rating is required.

SF5350 shown combined with Ronda RON6539. Can be used with any shade with an E27 gimble. See pages 114–116 for more options.

SF0150 shown combined with the Ronda RON652, SF0175 shown with RON6539. For use with Ronda 40cm or 60cm shades only. See pages 114–116 for more information.

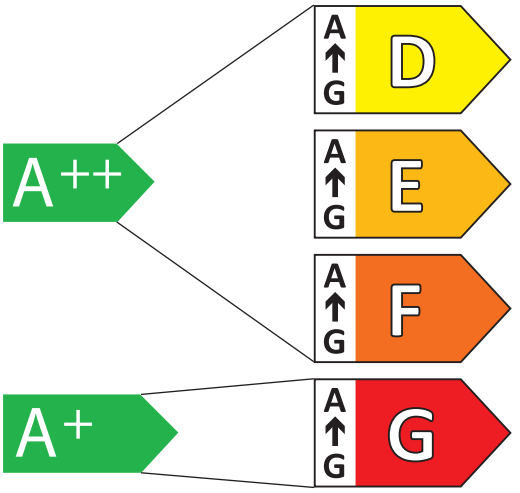

# LAMPS

## Revised Energy Rating - the same performance, a different grading scale

For clearer understanding of relative energy performance and to encourage increased performance and efficiency, a new scale has been introduced by the UK government. The existing ERP energy rating for lamps (light bulbs) is graded from the most energy efficient (A++) down to least (E). The new scale is graded from A down to G. Old A+ products now equate to the lowest G band, and the previous top grade A++ now equate to anything from D through to F.

Despite the apparent lower rating for our current lamps, their performance and efficiency is unchanged. Meanwhile, we are rising to the challenge of developing even more efficient lamps that will achieve the highest grades on the new, more demanding scale.

Please note that existing stock with the older label can be sold until **April 2023**. This means that both styles of label will be in the market until then.

**old style** **new style**

## Selected halogen lamps (bulbs) are still available until 1st September 2023

The following halogen lamps can be placed on the market until **1st September 2023** and can be legally sold after that date until stocks are exhausted:

- **12v halogen G4 lamps**
- This includes our **BULG410**

- **240v halogen G9 lamps**
- This includes our **BULG920** and **BULG933**

- **R7S linear halogen below 2700lm** (approximately 140w equivalent)
- This includes our **BULR7S80** and **BULR7S120**

## Understanding Lamp Specifications

### Lumens & Equivalent Wattage

The higher the lumens, the brighter the lamp. The equivalent wattage is a comparison, for reference only, to a traditional incandescent lamp.

### Energy Rating

old style new style

A grading of how efficient the lamp is at converting energy. The Revised Energy Rating scale is explained above.

### Colour Temperature

Ranging from 2200k (kelvin) to 5000k, the colour temperature shows how cool (blue) or warm (red/orange) the light from a lamp is. Cooler colours are crisper; warmer colours are more relaxing. 2700k is most similar in colour tone to the traditional incandescent lamp.

### Dimmable

Lamps with this symbol are dimmable; for wall and ceiling lights you must use an LED-compatible dimmer, such as a Varilight V-Pro.

## Introducing our new energy efficient **TOUCH LED** lamps.

A range of energy efficient LED lamps developed to work with our 3-stage and on-off touch lamps.

Each lamp has undergone testing with our range of touch lamps to ensure compatibility. The technology is specific to touch switches and as such these touch LED lamps cannot be used with standard dimmers.

## E27 MICRO FILAMENT LED

Our premium micro filament LED lamps feature a clear light guide column with a laser-etched graphic filament. When lit, the appearance is similar to original fine filament vintage lamps, giving a very warm decorative glow. The outer glass envelope of clear borosilicate glass has a highly reflective coating that repels dust. Our micro filament range is available in medium and large globes, as well as the classic Edison shape. (see across)
