PrismaSeT G - Reliable, Easily connected

New design with sustainable packaging

Enhance buildings with in-built connectivity and efficient design

The new design of PrismaSeT G increases the robustness of the panels, helps to gain efficiency on every level and provides peace of mind to the panel builders, electrical contractors and facility managers.

In addition, the new 100% green packaging decreases the quantity of waste and its disposal cost by using only cardboards.

Green Packaging

- Progressive cancellation of plastic and polystyrene of packaging.
- 100% recyclable cardboards.
- Time & money saving to sort waste.
- New cross beam in cardboard for a more robust packaging.

Increase Plinth Robustness

- Metallic reinforcement all along the plinth to facilitate transportation.

New Improved Handle

- More robust handle.
- Ergonomic handle design.
- Aesthetically appealing look.

Digital Instruction Sheets

- Cancellation of systematic printed instruction in each packaging.
- 1 printed 'Super Leaflet' with all instructions (available to order once).
- 1 systematic QR code to link to the right instruction sheets.

Wireless Sensor for Early Detection of Overheating Cables

SMT10020

HeatTag is a smart sensor for early detection of overheating wire connections or overheating cables. HeatTag helps prevent electrical switchboards from being damaged, by analyzing gas and particles in the air and sending alerts before any smoke or insulator browning.

Standards

The HeatTag smart sensor complies with the following standards:

- IEC 61010-1:2017 UL/CSA/EU CENELEC deviations
- IEC/EN 61326-1b FCC Part 15B and 15C
- ETSI/EN 300328
- ETSI/EN 301489-1
- IEEE 802.15.4

Note:

Do not use HeatTag as a safety device. HeatTag does not replace the fire protection devices of the building.

Presentation

HeatTag smart sensor:

- Sends three levels of alert depending on the severity of the situation it detects.
- Helps prevent potential fire damages by analyzing gas and micro-particles emitted by cable sheaths when overheating.
- Measures temperature and humidity.
- Communicates with all Schneider Electric EcoStruxure panel servers or gateways.
- Is integrated in EcoStruxure solutions.

The HeatTag sensor must be installed only in non-forced air ventilated switchboards. It must be mounted on a DIN rail.

During the first 30 minutes after commissioning, HeatTag can generate an alert for test. It then takes another 8 hours for HeatTag to define its nominal environment and to be fully operational. Each time the HeatTag sensor is powered on, these 30-minute and 8-hour sequences are repeated.

Operation

Paired with Schneider Electric panel servers or gateways, HeatTag reports:

- Alerts
- Air quality index
- Temperature and humidity measurement
- Self-diagnosis information

Air Quality

HeatTag provides an air quality index, ranging from 0 to 10, and displays the air quality evolution trend in a table.

When the air quality index is equal or above 10, HeatTag sends an alert. It has detected abnormal cable sheath heating in the switchboard.

Detection Alert

An alert is triggered when HeatTag detects abnormal cable sheath heating in the switchboard, which can be caused by:

- One or more loose connections (too high contact resistance)
- A poorly sized cable compared to the rated current
- Overcurrent and poorly regulated protective equipment

Alerts are triggered with three severity levels:

- Low level: a cable is slowly overheating in the installation, you must plan a maintenance visit of the installation.
- Medium level: a cable is overheating in the installation, you must go quickly to the installation for maintenance.
- High level: a cable overheats very quickly, you must check the installation immediately.

The orange application led flashes when HeatTag sends an alert to the panel servers or gateways.

Temperature

HeatTag provides a temperature value with a 30 second default transmission period. The transmission period can be increased by the system in case of high wireless data traffic.

Humidity

The HeatTag provides a humidity rate with a 30 second default transmission period. The transmission period can be increased by the system in case of high wireless data traffic.

Self-Diagnosis

HeatTag carries out two types of diagnosis:

- A minor alert is sent when the fan rpm is 80% of its nominal rpm, which means fan clogging.
- A major alert is sent when HeatTag is faulty. In this case it cannot report measures at all, nor reports incorrect measures.

Wireless Sensor for Early Detection of Overheating Cables

HeatTag Smart Design

- No settings
- Nominal environment auto-learning to avoid false alerts
- Concentrator auto-discovery
- Alerts generated by a powerful algorithm integrated in HeatTag

Electrical Characteristics

Supply voltage	110-277 V AC, -15 % / +15 %
Frequency	50-60 Hz
Max. consumption	0.1 A
Operating temperature	-15 °C / +70 °C (5 °F to 158 °F)
Storage temperature	-20 °C / +85 °C (-4 °F to 185 °F)
Relative humidity in operation	15-90 %
Altitude of use	0-2000 m (0-6500 ft)
Degree of pollution (IEC 60664-1)	3
Overvoltage category	OVC III

Sensor Characteristics

Temperature measurement	Measurement range	-15 °C / +70 °C (5 °F to 158 °F)
	Measurement accuracy	-1.1 °C / +1.1 °C
Humidity measurement	Default transmission period	30 seconds (higher in case of high wireless data traffic)
	Measurement range	15-90 %
	Measurement accuracy	±9 RH %
Air quality	Default transmission period	30 seconds (higher in case of high wireless data traffic)
	Index (0 to 10), alert generation when index ≥ 10	
Test alert after pairing	During the first 30 minutes	
Environment auto-learning phase	8 hours after the first 30 minutes	

Installation

Communication Architecture

List of compatible communicators:

- EcoStruxure Panel Servers
- PowerTag Link
- PrismaSeT Wireless Panel Server

Wiring

HeatTag must be protected by 2 A breaker.

It is delivered with a separate connector.

Mechanical Characteristics

Dimensions (w x h x d)	108 x 107 x 55 mm
Weight	270 g
Degree of protection (IEC 60529)	IP20

Wireless Sensor for Early Detection of Overheating Cables

Integration in PrismaSeT G

HeatTag must be installed following the Instruction Sheet recommendations (MFR5173801-02).

MFR5173801-02

HeatTag must be installed on a DIN rail.

To respond to increasing building requirements

and property

Control
deadlines
and costs

PrismaSeT:

the optimised, tested and IEC compliant solution,
for low voltage electrical distribution and control switchboards.

B

PrismaSeT, a comprehensive range of enclosures and cubicles

- > A solution based on more than **30 years of experience** in low voltage switchboards.
- > Integrating Schneider Electric switchgear offerings and ensuring electrical, mechanical and communication **functions complete consistency**.
- > Quality production, **certified ISO 9001** and manufactured in Montmélian (France).

Pack 160 A enclosures

Prisma**SeT** Pack 250 A enclosures

Prisma**SeT** G enclosures

IP30 / IP4X, IP55, up to 630 A

160 A

250 A

630 A

- Schools
- Small shops
- Hotels, etc.

Pack

- Small companies

- Malls, etc.

Prisma**SeT** G

PrismaSeT P cubicles up to 4000 A IP30, IP31, IP55

The optimised, tested and IEC compliant solution, for low voltage electrical distribution and control switchboards.

B

- Hospitals
- Data centres
- Logistics centres
- Shopping centres
- Offices buildings
- Medium industrial solutions

PrismaSeT P

Simple, functional systems for safe, up to 630 A

Switchboards that are safe...

With **PrismaSeT G** you can be sure to build **100 % Schneider Electric** switchboards that are safe, optimised:

- > All components (switchgear, distribution blocks, prefabricated connections, etc.) are perfectly rated and coordinated to work together;
- > All switchboard configurations, even the most demanding ones, have been tested.

You can prove that your switchboard meets the current standards, at any time.

You can be sure to build a reliable electrical installation and give your customers full satisfaction in terms of dependability and safety for people.

...aesthetics

PrismaSeT G with its discreet design, blends harmoniously into all tertiary buildings, including in entrance halls and passageways.

Available power

Safety of people and property

Controlled costs and delivery times

Upgradeability

upgradeable LV switchboards

...optimised and upgradeable

With **PrismaSeT G** you can build just the right switchboard for your customer, sized precisely to fit costs and needs. With this complete, prefabricated and tested system, it's easy to upgrade your installation and still maintain the performance levels.

- > The wall-mounted and floor-standing enclosures combine easily with switchboards already in service.
- > Devices can be replaced or added at any time.

Simple gestures for cabling in the workshop

All connection points are fully accessible and easy to check.

Efficient installation and connection work on site

Easy connection on site, whatever the cable cross-section or installation location.

Easy maintenance throughout the switchboard

Easy and direct access to devices, in a switchboard in service.

The switchboard, central to the electrical installation

Both the point of arrival of energy and a device for distribution to the site applications, the LV switchboard is the intelligence of the system, central to the electrical installation.

It plays an essential role in the availability of electric power, while meeting the needs of personal and property safety. Its definition, design and installation are based on precise rules; there is no place for improvisation. The IEC 61439 standard aims to better define "low voltage switchgear and controlgear assemblies", ensuring that the specified performances are reached. It specifies in particular:

- > the responsibilities of each player, distinguishing those of the original equipment manufacturer; the organisation that performed the original design and associated verification of an assembly in accordance with the standard, and of the assembly manufacturer - the organisation taking responsibility for the finished assembly;
- > the design and verification rules, constituting a benchmark for product certification.

All the component parts of the electrical switchboard are concerned by the IEC 61439 standard. Equipment produced in accordance with the requirements of this switchboard standard ensures the safety and reliability of the installation.

A switchboard must comply with the requirements of standard IEC 61439-1 and 2 to guarantee the safety and reliability of the installation. Managers of installations, fully aware of the professional and legal liabilities weighing on their company and on themselves, demand a high level of safety for the electrical installation.

What is more, the serious economic consequences of prolonged halts in production mean that the electrical switchboard must provide excellent continuity of service, whatever the operating conditions.

The Schneider Electric solution

- > Specify switchboards that comply with standard IEC 61439-1 and 2.
- > Guarantee a level of safety that has been 100 % tested, from the day the switchboard is installed and throughout its service life.
- > Ensure a lasting investment through easy upgrading of the installation in compliance with the standard.
- > Guarantee that the switchboard complies with the technical specifications.

PrismaSeT tested switchboards

The conformity of the switchboard has been tested and proven.

A PrismaSeT switchboard is:

- > made up of Schneider Electric low voltage devices and components that all comply with the applicable standards;
- > based on configurations in our catalogue;
- > made up of PrismaSeT and Linergy mechanical and electrical components that have been subjected to the verification of original equipment manufacturer;
- > mounted and wired by a panelbuilder in compliance with professional standards;
- > subjected to the individual verification.

Schneider Electric makes available to the panelbuilder everything required to create tested PrismaSeT switchboards, including the basic configurations in the low voltage distribution catalogue, all the documentation for switchboard design and mounting, calculation and design software, etc.

Panelbuilders can demonstrate conformity with standard IEC 61439-1 and 2 by presenting the declarations or certificates of conformity for type tests carried out by independent laboratories (ASEFA, ASTA, etc.) and supplied by Schneider Electric. The panelbuilder is responsible for the individual routine verification and delivers the corresponding declarations of conformity.

Original Manufacturer and Assembly Manufacturer: Both involved in tested assemblies

Standard IEC 61439 clearly defines the type of verifications that must be conducted by both organisations involved in final conformity of the solution: the **Original Manufacturer**, guaranteeing assembly system design and the **Assembly Manufacturer**, responsible for the final conformity of the switchboard.

* Schneider Electric has developed a specification guide.

The main 10 functions of standard IEC 61439

For each of the following 10 functions, the standard IEC 61439 requires design verifications from the system manufacturer - mainly through type-tests - and routine verifications on each panel from the Panel Builder to achieve 3 basic goals: safety, continuity of service and compliance with end-user requirements.

Safety

Voltage stresses withstand capability

To withstand long term voltages, and transient and temporary overvoltages according to the insulation coordination principles and requirements.

Current-carrying capability

To protect against burns and to withstand temperature rise:

- > when any circuit is continuously loaded, alone, to the specified current
- > when the **assembly** is loaded to the specified current according to the specified load pattern (between circuits and/or as a function of the time).

Short-circuit withstand capability

To withstand the stresses resulting from the prospective short-circuit current and from the associated data (High forces between conductors, temp. rise in a very short time, air ionization, overpressure).

Protection against electric shock

- > Hazardous-live-parts not to be accessible (basic protection)
- > Accessible conductive parts not to become hazardous-live (fault protection).

Protection against risk of fire or explosion

- > Resistance to internal glowing elements
- > **Note:** protection of persons, and optional protection of the **assembly**, against arcing due to internal fault can be specified through a "special test" according to IEC 61641.

Continuity of service

Maintenance and modification capability

Capability to preserve continuity of supply without impairing safety during **assembly** maintenance or modification

- > Electrical condition of the **assembly** or various circuits
- > Speed of exchange of the functional units
- > Test facilities...

Electro-Magnetic compatibility

To properly function (immunity) and not to generate EM disturbances (emission) in specified environmental conditions:

- > Industrial networks or locations (Environment A)
- > Domestic, commercial, and light industrial locations (Environment B).

Compliance with end-user requirements

Capability to operate the electrical installation

To properly function, according to:

- > The electrical diagram of the overall system and related information (voltages, coordination...)
- > The specified operating facilities (e.g. free or restricted access to Man Machine Interfaces, isolation of the outgoing circuits...).

Capability to be installed on site

- > To withstand handling, transport, storage... and installation constraints
- > Capability to be erected and connected (type of enclosure, type, material and cross sectional areas of external conductors).

Protection of the **assembly** against mechanical and atmospheric environmental conditions

- > Presence of water or solid foreign bodies (IP according to IEC 60529)
- > External mechanical impacts (optional IK according to IEC 62262)
- > Indoor or outdoor installation (humidity, UV).

IEC 61439-1 paragraph 11.4**Protection against electric shocks and integrity of protection circuits**

The following should be checked visually:

- > presence of protective shields against direct and indirect contacts on live parts;
- > presence of the PE conductor.

The continuity of protection circuits is ensured by compliance with the assembly instructions delivered with each product.

IEC 61439-1 paragraph 11.5**Integration of incorporated components**

The assembly manufacturer must comply with the instructions of the original equipment manufacturer for installation and wiring of the components used.

IEC 61439-1 paragraph 11.6**Internal electric circuits and connections**

Schneider Electric recommends marking the nut with a tinted acrylic lacquer, indelible and temperature-resistant.

This allows:

- > not only self-checking to check effective tightening to torque;
- > but also identification of any loosening.

IEC 61439-1 paragraph 11.9**Dielectric properties**

The main circuits, and the auxiliary and control circuits connected to the main circuit, shall be subjected to the test voltage in accordance.

IEC 61439-1 paragraph 11.10**Wiring, operating performance and function**

Verification of wiring and marking conformity with the drawings, parts list and diagram.

Standard individual check sheet

in accordance with the IEC 61439-1 and 2 standard from the assembly manufacturer (panelbuilder)

Electrical switchboards up to 630 A

The PrismaSeT G functional system can be used for all types of low voltage distribution switchboards up to 630 A, in commercial and industrial environments.

PD090228_SE_2013.eps

Switchboard design is very simple

① A metal structure

The switchboard is made up of one or more enclosures, combined width-wise and/or height-wise, with a choice of doors (plain or transparent).

② A distribution system

A complete offer of centralised or row distribution blocks, with busbars in duct or on rear of enclosure, provides current distribution over the full height of the switchboard.

③ Complete functional units

Built around each device, the functional unit includes:

- a dedicated mounting plate for device installation
- a front plate to block direct access to live parts
- prefabricated busbar connections to connect devices to the busbar
- cable-running accessories can be clipped onto the back of double-profile modular rails.

Each functional unit contributes to a function in the switchboard. The system includes everything required for functional unit mounting, supply and connection.

The PrismaSeT G and functional unit components, in particular, have been designed and tested according to device characteristics.

This design approach ensures a high degree of reliability in system operation and optimum safety.

Assets of PrismaSeT switchboards

① A dependable electrical installation

The total compatibility of Schneider Electric devices with the PrismaSeT enclosure is a key advantage in ensuring a high level of installation dependability.

② An upgradeable electrical installation

Thanks to modular design, PrismaSeT switchboards can be easily modified to integrate new functional units as needed.

Maintenance operations, carried out with the switchboard de-energised, are fast and straight-forward due to easy access to devices.

③ Total safety for personnel

Work in a switchboard must be carried out by authorised persons in compliance with all applicable safety regulations.

To increase the safety of personnel, devices are installed behind protective front plates; only the operating handles are accessible.

Additional internal protection (partitions, barriers) is available to protect against direct contact with live parts.

Terminal shields are mandatory for installing ComPacT NSX and INS/INV devices in PrismaSeT for even more personnel safety.

Electrical switchboards up to 630 A

System design has been validated by type tests as per standard IEC 61439-1 & 2 and benefits from the combined experience of Schneider Electric over many years.

PB115632_73.eps

Readily available close by

The kit concept makes handling and transport easier and you get to benefit from Schneider Electric's efficient international logistics. Your distributor, hand-picked by Schneider Electric, can give you the very best advice.

Electrical characteristics

Comply with IEC 62208 and EN 62208 standards:

- rated insulation of main busbars at rear of enclosure: 1000 V
- InA: 630 A
- rated peak withstand current Ipk: 53 kA
- short-circuit current Icc: 70 kA
- frequency: 50/60 Hz

Mechanical characteristics

- Steel sheet metal
- Electrophoresis treatment + hot-polymerised polyester epoxy powder, white colour RAL 9003.
- Enclosures supplied in kit form, totally dismantlable, designed to be assembled and wired horizontally on a work station.
- Can be combined side by side and one on top of another
- Degree of protection:
 - IP30: without door
 - IP40: with door
 - IP41: with door + canopy
 - IP43: with door + gasket + canopy
 - IP55: IP55 PrismaSeT G offer, supplied in kit form
- degree of protection against mechanical impacts:
 - IK07: without door
 - IK08: with door (transparent)
 - IK10: with plain door
 - IK10: for PrismaSeT G IP55
- Seismic characteristics: 2,5G without accessories
- Enclosure dimensions:
 - 3 widths:
 - W = 300: ducts
10 modules width
 - W = 600: Wall-mounted and floor-standing enclosures,
24 modules width
 - W = 850: Floor-standing enclosures
36 modules width
 - depth with door:
 - enclosures G IP30: 250 mm
 - enclosures G IP55: 260 mm
 - heights:
 - PrismaSeT G IP30: 12 heights: 330 mm to 1980 mm
 - PrismaSeT G IP55: 7 heights: 450 mm to 1750 mm
- Inside switchboards.

Electrical switchboards built using the PrismaSeT functional system and Schneider Electric recommendations fully comply with international standard IEC 61439-1&2.

With PrismaSeT, your solution is 100 % optimised

Flexible design for building applications and their operation

Thanks to PrismaSeT solutions, design offices can design and customise switchboards easily and quickly:

- > organisation by functional units, each corresponding to an application in the building (lighting, HVAC, lifts, etc.)
- > organisation by dedicated physical zones: one for functional units (switchgear, mounting plates, front plates), one for power distribution, and one for connections.

100 % dependable and optimised design, in compliance with costs and deadlines

By supporting design offices with the services and software tools (Ecodial, Rapsody...) needed to quickly design switchboards, we help them to highlight their professionalism: switchboards with tested architectures to meet the most stringent specifications.

Our tools and services also enable them to meet requirements concerning compliance with costs and deadlines: optimised selection of the appropriate components for each switchboard (switchgear, distribution systems, enclosures with perfect electrical and mechanical consistency), front panel design and fast cost studies.

100 %

of dedicated building switchboard architectures are tested in compliance with IEC standards and can be customised.

Modular devices

Acti 9

NG125, C120 circuit breakers INS-INV40/160 switch disconnectors

Presentation

A double-profile modular rail offering a high level of performance
Made of an aluminium alloy with a magnetic properties, the rail design is extremely rigid. The rail supports are crimp mounted.

Fast mounting

The supports have positioning studs to guide the rail on the rear uprights. Only two mounting screws are required.

Multiple functions

A number of devices can be clipped directly onto the rails, including Linergy FM 80 and 200 A distribution systems, all horizontal cable-running accessories such as cable straps and trunking supports, as well as the supports for Linergy TB earth bars.

Supply from all directions

Supply to the rows, using Linergy FH comb busbars or Linergy FM distribution systems via:

- > Linergy BS or insulated busbar Linergy BW installed behind the devices.
- > Linergy BS busbar installed in the duct.

Centralised power supply

Via Linergy DX or DS distribution blocks, Linergy DP.

PB115632_09 eps

B

Distribution

Linergy FM 80 and 200 A device feeders

- > Fast and secure front connection using spring terminals.
- > Reliable connections, with balanced tightening, insensitive to vibrations and thermal variations.
- > All types of modular devices can be mixed.
- > Easy balancing of phases.
- > Interchangeable devices.
- > Easy installation upgrades.
- > Fully insulated (IPxxB).

Linergy FH comb busbars

- > Direct connection to device terminals or via a connector.
- > Fully insulated.
- > Can be cut to length.

Linergy DX quick distribution blocks

- > See page D-10

Linergy DP distribution blocks

- > See pages D-12, D-13

Linergy DS screw distribution blocks

- > See page D-14

Cable running

Straps

- > Easy and fast to install.
- > Low cost.
- > Perfectly organised and integrated cable running.
- > Professional finish.
- > Mounting at the back of modular rail, very comPacT dimensions.

Trunking

- > Traditional solution.

PB115636 eps

Upgradeable PrismaSeT functional units = the best electrical + mechanical + communication consistency.

Functional units include switchgear mounting plates, front plates, connections, barriers for ensuring the best level of continuity of service, and helps in securing life and property.

ComPacT NSX circuit breakers for PrismaSeT G

Source changeover system

Presentation

A range of intelligent circuit breakers

ComPacT NSX improves management of electrical installations

In addition to protection functions, the new generation of ComPacT NSX moulded-case circuit breakers provides new features (analysis, measurements and communication) with access to information:

- > either directly on the LCD screen of the trip unit to set the circuit breaker or read the main electrical values, including U, I, f, P(W) and E (kWh)
- > or on the FDM 121 or FDM128 display on the front of the PrismaSeT switchboard (duct door with special front plate) for quick access to a greater wealth of information.

A cable connects the display to the trip unit without any special settings or configuration, making it easy to personalise alarms and displays or read event logs and maintenance indicators.

Integration of ComPacT NSX in PrismaSeT

Installation of ComPacT NSX devices in a PrismaSeT functional switchboard is very easy and made of a functional unit system:

- > dedicated mounting plates for ComPacT NSX offer
- > matching power connections Linergy DP distribution block and prefabricated connections, connection blocks, power supply blocks)
- > partitioning
- > compliance with the safety perimeter, by design.

Installation architectures for the measurement function

ComPacT NSX circuit breakers equipped with Micrologic 5/6 A or E trip units provide measurements that can be read on the FDM 121 or FDM128 display module or directly on the circuit breaker. This makes it possible to optimise the space required by the functional unit.

Installation times have also been reduced with respect to system with current transformers.

What is more, installation and connections are made easier because the FDM121 or FDM128 may be installed:

- > via a direct cut-out in a plain door
- > on the front of a W600 enclosure for one or four 96 x 96 devices on partial door cut-out.

A new front plate

The front of ComPacT NSX circuit breakers has an eye-pleasing curved profile, making PrismaSeT switchboards even more attractive. Assets of PrismaSeT switchboards. PrismaSeT front plates are designed for all types of controls (toggle, motor mechanism, rotary handle).

Presentation

sources:

- > normal source S1
- > replacement source S2 which steps in to supply the installation if the normal source is not available.

A mechanical and/or electrical interlocking system between two ComPacT switch-disconnectors or circuit breakers (or a mixture) avoids simultaneous connection of the two sources during switching. In PrismaSeT G, a manual changeover with mechanical interlocking of devices may be installed.

This is the simplest system. A human operator is required and consequently, the transfer from the normal source to the replacement source is delayed.

A manual source-changeover system comprises two or three manually controlled devices (circuit breakers or switch-disconnectors) that are mechanically interlocked.

The interlocking system avoids simultaneous connection (even transient) of the two sources.

For more information on the communication functions of ComPacT NSX, see the ULP system user manual, ref. TRV99100, and the ComPacT NSX catalogue, ref. LVPED208001_EN. See catalogue "ComPacT, MasterPacT source changeover systems", ref. LVPED21122EN

Presentation of FuPacT fusegear for PrismaSeT G

Presentation

Whatever the switchboard configuration, PrismaSeT range offers tested and certified solution guaranteeing the safety of life and properties.

2 families of FuPacT fusegears

FuPacT GS

FuPacT GS ensures your power application for:

- > distribution switchboards
- > disconnection, isolation, locking and primary control of incoming circuits
- > emergency stop,
- > motor feeders (protect motors against single-phasing).

FuPacT fusegears have a test position for greater flexibility, easy to use.

FuPacT ISFT

FuPacT ISFT fuse-switch disconnectors are particularly suited for:

- > secondary distribution circuits
- > powering and control of industrial motors as local isolation device.

Installation

- > FuPacT fusegears have dedicated mounting plates and front plates.
- > The upstream and downstream connections are made by the panelbuilder.
- > Vertical mounting allows to install several FuPacT fusegears.

Positioning and mounting of the devices in the switchboard and filling rate of it take into account temperature rise, withstand short-circuit capacities, isolation clearances.

Presentation

Get more out of your electrical panels with robust and ergonomic pushbuttons, switches.

Robust performance that can withstand even the most severe environments.

A touch of style electrical panels and machines.

Modern design for customizing new and existing enclosures to meet the requirements of customers.

New offers, taking smart panels to the next level.

The new USB and RJ45 ports offer you a simple, effective way to connect a PC or USB memory device right to the front plate of your machine enclosure to:

- > Export data
- > Update the PLC and HMI program
- > No need to open the door:
 - Eliminate electrical hazards
 - Keep dust out of the enclosure

Metal_Green-010-CM.JN.psd

XB5_633_CPSC160229A.eps

XB5_633_CPSC16027B.eps

Standards

Harmony metal accessories for robust performance in all situations

From severe environments and potentially-explosive atmospheres, to extremely hot or cold temperatures, you can count on Harmony.

- > Compliance with international standards (IEC, UL, CSA, CCC, EAC, JIS)
- > Marine certified (BV, RINA, LROS, DNV, GL)
- > Sealing effectiveness rated (IP66, IP67, IP69, IP69K, Type 4X)
- > Operating temperature range of -40 °C
- > to +70 °C
- > High impact resistance: up to IK06
- > High vibration resistance: shake-proof connector screws
- > Standard and low-load, high-power electrical contact

B

Installation

The Harmony range for faster, simpler installation

Designed for efficiency that helps keep costs down.

- > Can be mounted with a single hand
- > Fastens with a single anti-rotation locking screw
- > Accessories compatible with the entire Harmony diameter 22 mm range

Smart Panels: powerful technologies, easy to implement

In addition to basic functions and enclosures, the Smart Panel solution is enhanced with new features for collecting and transmitting energy data from the main switchboard panel and all subpanels, making it a highly flexible and accurate energy management system. All the panels, from main, division to tertiary, are smart panels with data gathering and transmission functions).

Smart Panel solution

The Smart Panel solution automates energy usage data collection to eliminate time-consuming and error-prone manual meter reading. Automatic metering at the source lets you see exactly how and where the building is using energy. It also performs intelligent cross references of energy usage:

- by zones (offices, lobby, storage, parking, etc.)
- with usage by type (lighting, heating, hot water for sanitation, etc.).

Metering and monitoring form the basis of the Smart Panel solution.

Energy management has never been simpler

1. Measure

Embedded and stand alone metering & control capabilities

2. Connect

- > Integrated communication interfaces
- > Ready to connect to energy management platforms

3. Act

- > Data-driven energy efficiency actions
- > Real time monitoring and control
- > Access to energy and site information through on-line services

Switchboards are the most convenient location to collect data about electrical supplies throughout the building.

Schneider Electric provides best-in-class devices for electrical protection, control, and measurement, as well as efficient switchboard build-up systems.

We offer new digital possibilities through better connectivity, thanks to the enerlin'X system components embedded in our power operating devices.

Connecting is easy with Smart Panels.

Ethernet is today the most widespread communication protocol in professional building, providing fast data transmission. Thanks to the Enerlin'X digital system, switchboards can be connected via Ethernet like any other device through an RJ45 socket.

The design of Enerlin'X:

- > grouping of similar functions in the smart components (e.g. Acti 9 Smartlink)
- > error-free cabling, fast connection-disconnection
- > space-savings in the enclosure.

Schneider Electric serves the needs of any building, regardless of size and criticality, and helps find savings opportunities.

Our solutions provide different mixes of energy, network, and asset management features tailored to each size. Clear visibility of the energy supply system and consumption is provided by locally installed software while online services offer improved mobility and convenience.

1. Measure

Power supply and protection monitoring, metering

ComPacT circuit breakers and switches

They offer reliable protection as well as support energy management by providing energy consumption date, equipment status, and operational support information.

Acti 9 circuit breakers, residual current devices, surge arresters

Each Acti 9 protection devices contributes to electrical supply reliability. Easy-to-fit auxiliaries transmit real-time status to the Enerlin'X system and additional RCA modules enable digitally controlled resetting after a trip.

Circuit and load control

Acti 9 contactors and impulse relays, remote controlled ComPacT

To improve user comfort, lighting or other loads are switched on and off, separately or all together via the digital system.

PowerLogics meter

monitor key distribution points 24 hours a day, from generators, substations, and services entrances, to main feeders and loads. Help improve network reliability by tracking real-time power quality equipment status, trading loads, and logging events and alarms.

Modular energy meters

Basic kWh meter for elementary applications to MID-compliant meters for billing applications, and advanced energy meters capable of measuring a variety of electrical parameters.

2. Connect

Acti 9 Smartlink

- > Digital interface for Acti 9 or third-party devices.
- > Modular rail clippable, no extra space required; 100 % prefabricated connections.
- > 2 versions: Modbus SL slave or Ethernet + Modbus SL.
- > Automatic e-mail sent upon critical events (configurable).
- > Embedded web pages for energy monitoring & control master.

Com'X 200 energy data logger

- > Collects data from electrical and other devices throughout the building.
- > Delivers batches of data ready to be processed by StruxureWare™ solutions and online services.

Enerlin'X I/O

Provides tailored additional functions.

Enerlin'X IFM

Modbus connection and data collection for one ComPacT device.

Com'X 510 energy server

- > Collects data from electrical and other devices throughout the building.
- > Provides detailed and global views of energy consumption as soon as as connected, with data accessible via web browser.

Enerlin'X IFE

- > Ethernet communication interface for power circuit breakers
- > Embedded web pages for energy control, and maintenance
- > Modbus master, with automatic detection and configuration of "slave" devices
- > Automatic e-mail sent upon critical events (configurable)

3. Act

Enerlin'X FDM121

- > Access to switchgear settings, status, and measurements.
- > Auto discovery of Modbus SL connected devices.

Com'X 510 web pages

- All-in-one energy management for small and medium buildings, allowing you to detect the most important opportunities for savings.
- > Provides dashboards and historical trend charts for consumption, viewable via web browser.
 - > Connection to network via WiFi or Ethernet.
 - > Aggregates electrical data with gas, steam, air, water.

Powerview

User-friendly web pages

User-friendly displays of all datas stored in enerlin'X devices, accessible via Ethernet and viewable with web browsers. includes user-configurable e-mail notification feature.

Remote access

Powerview webpages accessible anytime anywhere through secure, private internet access. User-configurable e-mail notification feature also included.

Rapsody software

Easy design with Rapsody software

A time-saver in the design and quotation phases.

More flexibility since modifications and upgrades are possible throughout the project.

5

easy steps to design a switchboard

1

Define the switchboard's electrical and environmental characteristics, in a few clicks.

4

Choose the switchboard and let the software set up the enclosure.

A list of mounting and connection accessories is proposed to make mounting work easier.

2

Choose and configure the devices to be installed, with no risk of error.

5

Automatically **export** the information required to make a clear, comprehensive and professional quotation.

3

Customise, and easily modify the single-line diagram.
Move or duplicate devices. **Generate** current distribution and connection systems.

Green Premium™

Endorsing eco-friendly products in the industry

**Green
Premium™**
Product

Green Premium is the only label that allows you to effectively develop and promote an environmental policy whilst preserving your business efficiency. This ecolabel guarantees compliance with up-to-date environmental regulations, but it does more than this.

Over 75% of
Schneider Electric
manufactured products
have been awarded the
Green Premium ecolabel

Discover what we
mean by green ...

Check your products!

Schneider Electric's Green Premium ecolabel is committed to offering transparency, by disclosing extensive and reliable information related to the environmental impact of its products:

RoHS

Schneider Electric products are subject to RoHS requirements at a worldwide level, even for the many products that are not required to comply with the terms of the regulation. Compliance certificates are available for products that fulfil the criteria of this European initiative, which aims to eliminate hazardous substances.

REACH

Schneider Electric applies the strict REACH regulation on its products at a worldwide level, and discloses extensive information concerning the presence of SVHC (Substances of Very High Concern) in all of its products.

PEP: Product Environmental Profile

Schneider Electric publishes complete set of environmental data, including carbon footprint and energy consumption data for each of the lifecycle phases on all of its products, in compliance with the ISO 14025 PEP ecopassport program. PEP is especially useful for monitoring, controlling, saving energy, and/or reducing carbon emissions.

EoLI: End of Life Instructions

Available at the click of a button, these instructions provide:

- Recyclability rates for Schneider Electric products.
- Guidance to mitigate personnel hazards during the dismantling of products and before recycling operations.
- Parts identification for recycling or for selective treatment, to mitigate environmental hazards/ incompatibility with standard recycling processes.

Catalogue number	LVS08964	LVS08965
Presentation	This system is generally used to illuminate the front of a switchboard.	- Lamp with a magnetic base for installation behind a door or directly on the cubicle framework. - Supplied without a power cord - H x W x D: 90 x 345 x 42
Characteristics	- Supply voltage: 220/240 V - Power rating: 8 W - Height: 1 module vertical (50 mm)	- Supply voltage: 220/240 V - Power rating: 11 W - Lamp: picoline OSRAM 8W (supplied) - Class 2 - IP20

(1) RH10, RH21, RH99, RMH relay and RM12T Multiplexer.

(2) IM9, IM9-OL, IM20, IM20H.

(3) For installation at the top or bottom of the enclosure, use a 3-modules modular front plate (LVS03203).

(4) 2/3 transparent front plate.

-
- Technical drawing of a cable tray assembly, showing internal components and wiring. The drawing is labeled 'D0301687.eps'.

-

- ②

Diagram illustrating the 1659-APS instrument panel configuration. It shows a single gauge mounted on the left and a triple gauge assembly mounted on the right, all within a light blue panel structure.

- ①

Diagram illustrating the front panel of the DCS31685 UPS. The panel features a large display screen showing various status indicators and a control panel with several buttons and a small indicator light.

②

-
- A diagram illustrating a 1D convolution operation. A horizontal light blue bar represents the input feature map with a total length of 68.3. Five vertical black lines divide the bar into six segments. The first segment on the left is labeled 68.3. Each of the five segments between the vertical lines is labeled 4.1. Below the bar, there are five pairs of vertical lines, each pair marking the start and end of a filter's receptive field. The distance between each pair of lines is labeled 68.3.

-
- Technical drawing of a 3D-printed part. The part is a rectangular block with a width of 92.4 mm and a height of 92.4 mm. It features two vertical slots, each 17.6 mm wide, spaced 92.4 mm apart. The total width of the part is 17.6 mm + 92.4 mm + 17.6 mm = 127.6 mm. The total height is 92.4 mm.

Terminal block and earth bar installation

Accessories

Support plate and dedicated mounting plate, in device compartment

This mounting assembly is used to easily install and connect a large number of terminal blocks in a minimum amount of space. It is particularly useful when a duct is not warranted or cannot be installed.

Used for	On mounting plate for terminal block and Linergy TB earth bar	Used for	In device compartment
			
Number of vertical modules	-		5 (250 mm)
Catalogue number	LVS04220		LVS04223
Characteristics	■ A mounting plate made up of two supports, is equipped with: □ a 1600 mm modular rail (LVS04226) for terminal blocks □ Linergy TB earth bar > page D-23 ■ The supports have cut-outs that can be used to easily tie down the connection wires.		■ Mounting brackets, fixed to the functional uprights at the top or bottom of the enclosure, is equipped with four 200 mm symmetrical rails. They are installed vertically to facilitate cable running. ■ To facilitate mixing of different size terminal blocks and ensure convenient connections from the front or the side, the distance between rails and the depth of each rail can be adjusted. ■ The assembly has cut-outs that can be used to easily tie down the connection wires. ■ Linergy TB earth bars and Linergy TR terminal blocks layout, supplied separately, can be installed between the rows of terminal blocks to form different configurations, e.g.: □ four sets of terminal blocks □ 3 sets of terminal blocks + one or two Linergy TB earth bars (W = 290 mm).

Installation on the side or in the width of the enclosure

This solution saves considerable space in the device zone and avoids the need for the 300 mm wide duct.

Partitioning in PrismaSeT G IP30 and IP55

Horizontal and Vertical system

Partitioning of functional units

Horizontal partitioning

The metal partitions are used to:

- separate the functional units from one to another
- create a physical separation between devices and a terminal block, for example.

Used for	W600	W850	W300
IP30 IP55			
Catalogue numbers	LVS04331	LVS04336	LVS04332
Characteristics	Metal. It is mounted directly on the functional uprights. Lateral and rear cut-outs are available for cable running or the installation of busbars at the rear of the switchboard.		

Vertical partitioning

The metal partition creates a physical separation between the device compartment and a wide duct, or enclosure.

It is used to:

- separate the devices from busbars or a distribution block installed in the duct,
- set up a special zone for terminal blocks in the duct.

Insulated flexible bars

The insulated flexible bars are tested in a type-tested switchboard environment. Their design takes into account the switchboard architecture where they are often in close proximity to a protection device (circuit breaker or fuse) with significant heat losses. The sizes for the flexible bars indicated below take into account the heat losses of Schneider Electric devices in a PrismaSeT switchboard.

Characteristics

Length	1800 mm
Rated insulation voltage (Ui)	1000 V

Connection between device busbar

The flexible bars are determined taking into account the connected device, whatever the internal temperature of the switchboard.

The bar sizes indicated below take into account the derating curves of devices.

Devices	Size (mm)	Catalogue numbers

(1) To connect a ComPacT NSX250 to Linery BW busbars, use a 24 x 5 mm flexible bar (**LVS04746**).

Connection between busbars

Flexible bars are designed for connections between busbars taking into account the following characteristics:

- a maximum temperature of 60 °C inside the switchboard. This corresponds to the average temperature inside a switchboard for an ambient temperature of 35 °C
- the maximum withstand temperature for the insulating material is 125 °C.

Note: for the connection of power cables, see [page G-8](#).

Thermal management

Ventilation

In most cases and notably for IP30 switchboards, the heat dissipation by convection takes place naturally and does not require fans.

However, when the switchboard is installed in temperate environments or when the degree of protection is high (IP54), ventilation accessories are indispensable.

For more in-depth information on selecting air-conditioning accessories and the thermal management of switchboards > [page G-26](#).

Thermal management

Heating elements

The resistors prevent condensation, corrosion and superficial leakage currents. They maintain a positive temperature in the enclosures when external temperatures drop very low.

Install heaters according to the desired power level at the bottom of the enclosure, respect a safety area of a least 10 cm around the device.

Vertical installation is recommended to ensure optimum convection.

The resistance heaters are equipped with a PTC - type sensor (positive temperature coefficient). Thanks to these heaters, the surface temperature stabilises at 75 °C when the ambient is at -5 °C.

Heating resistor			
			
Catalogue numbers	NSYCR55WU2	NSYCR100WU2	NSYCR250W230VV
Power rating	55 W	90 W	250 W
Characteristics	■ Vertical mounting. ■ Aluminium case with fins. ■ Temperature: □ turns off at 60 °C, □ turns on at 25-30 °C (temperature of the resistor itself). ■ Equipped with a symmetrical rail for rapid mounting (clips on). ■ Input voltage: 110-250 V.		■ Vertical mounting. ■ Aluminium case with fins. ■ Temperature: □ turns off at 60 °C, □ turns on at 25-30 °C (temperature of the resistor itself). ■ Equipped with a symmetrical rail for rapid mounting (clips on). ■ Input voltage: 230 V.

Regulating

Used to control the temperature inside electrical switchboards in conjunction with heating resistors and fans.

This thermostat can control the activation of a fan and a heater and regulate their temperature independently.

Double adjustable thermostat

Double temperature control with a resistance heater and a fan with separate operation

- Red button: with normally closed contact (NC) for controlling the resistance heaters.
- Blue button: with normally open contact (NO) for controlling the fans, signalling systems or alarms.

Panorama of the solutions

Distribution and connection

Linergy and PrismaSeT G: an optimised and high-performance type-tested offer (IEC 61439-1 and 2 standard)

> For incoming devices

Linergy DX 160 A and Linergy DP upto 250 A distribution block

- Reliable spring-terminal connections for outgoing circuits, requiring no maintenance
- Horizontal or vertical installation in minimum space

Linergy BS 160 to 630 A distribution block

- Traditional, highly polyvalent solution
- Many installation possibilities

> For rows of modular devices

Linergy DX 125 at 160 A distribution block

- Spring terminals for electrical connections that stay tight
- Front designed to integrate perfectly with modular devices

Linergy FM 63/200 A

- Reliable spring-terminal connections requiring no maintenance
- Fast installation
- Easy upgrades through replacement or addition of devices
- Easy balancing of phases

Linergy FH 100 to 125 A comb busbars

- Fast and direct connections, adaptable to all needs
- Easy, economical connections

Linergy TR

- Fast and simple installation
- Multiple connection options (screw, spring or push-in connections)

Customised organisation of your switchboard

> Busbars up to 630 A for all switchboard architectures

Linergy BW busbars:
comPacT and insulated for fast upgrades.

Prefabricated connections, optimised and fully insulated.

Linergy BS busbars:
for traditional distribution.

Rear Linergy BS busbars.

Lateral busbars. The bars are staggered for easy access to connection points.

> Row distribution blocks for modular devices

Linergy FH comb busbars:
a simple, cost-effective solution.

Linergy FH comb busbars.
Linergy FH comb busbars are fully insulated.
Device can be connected in a single operation.

Linergy FM device feeder:
a fast, flexible and reliable solution.

Linergy FM device feeder 80 A.
The Linergy FM device feeder snaps easily onto the back of the rails.
All types of modular devices can be mixed in the same row and phase balancing is simple. It's easy to change or add devices.

Linergy FM device feeder 200 A.

> Centralised distribution blocks for switchboard incomers

Linergy DX 160 A 4P:
practical and aesthetic.
Modular monobloc distribution block for fast connections

Linergy DX 160 A 1P:
"Quick" distribution block.
Modular combinable components for fast connections.

Linergy DS 160 A:
a traditional solution.
Installation on modular rail on mounting-plate.
Screw-terminal connections.

Linergy DP 160 A:
modular and comPacT.
Installed directly downstream of ComPacT circuit breakers and switches without taking up any extra vertical modules. Fast connections in spring-loaded terminals.

Linergy DP 250 A:
modular and comPacT.

Linergy BW

Insulated busbars

Power busbars up to 630 A

Description

- ComPacT busbar, **IPxxB**, ready for installation (supplied complete with supports and end caps)
- Shaped busbar, threaded M6 with 25-mm pitch, can be cut with 200-mm pitch (150 mm for the 125 A)
- Busbar installed on insulating supports, screwed onto the rear uprights
- Wide selection of tested pre-wired connectors
- Clip-on covers to protect against direct contact (IPxxB). Can easily be cut to allow connections to pass through to the switchgear
- Ends protected by end caps

Linergy BW (160 to 630 A) is fully compatible with seismic constraints. Just add a seismic kit (LVS04130) to Linergy BW 160/250/400.

Rear flat busbars

Power busbars up to 630 A

IEC 61439-1 & 2

Description

The busbar can be 3-pole or 4-pole with ratings between 160 A and 630 A. 2 lengths are available: 1000 and 1400 mm, which can be cut as required. The number of supports depends on the installation maximum rated current. The supports allow installation of a 5th bar with 15 or 20 x 5 mm cross-section to create the earth collector.

Multi-stage busbars

Power busbars up to 630 A

IEC 61439-1 & 2

Description

Multi-stage busbars are installed in a duct W = 300 mm.

It could be interesting to install it in a duct between 2 enclosures for dividing the current.

All the connection points are easily accessible from the front.

The busbar orientation makes them easier to tighten and facilitates running the cables between them.

The current can be 3-pole or 4-pole with ratings between 160 A and 630 A.

2 lengths are available: 1000 and 1400 mm, which can be cut as required.

The number of supports depends on the installation maximum rated current.

Multi-stage distribution blocks

Power busbars up to 630 A

IEC 61439-1 and 2

Description

The multi-stage distribution block can be installed horizontally in the device zone or vertically in the 300 mm wide duct of enclosures and cubicles.

The distribution block is made up of:

- two staggered supports made of an insulating material
- four slanted copper bars with holes every 25 mm.

Quick distribution blocks

Distribution blocks

IEC 60947-7-1, IEC 61439-2

Description

- Downstream circuits are connected from the front, to spring terminals.
- Contact pressure automatically adapts to the size of the conductor.
- Contacts are insensitive to vibrations and thermal variations.
- Only one cable (flexible or rigid) can be inserted per terminal.

Linergy DP

Quick distribution blocks - ComPacT NSX and INS-INV up to 250 A

Distribution blocks

IEC 60947-7-1, IEC 61439-1 and 2

Description

■ The Linergy DP quick distribution block is designed for installation directly downstream of ComPacT NSX and INS-INV up to 250 A. It can also be clipped onto a modular rail.

Advantages

- It is quick to mount in the horizontal position. Electrical connections are made directly to the device terminals.
- It is the same width as the devices and does not take up any additional space in the switchboard.
- The connection terminals are slanted to facilitate cable entry and avoid exceeding the bending radius of the flexible and rigid cables.

Technical Data

Common characteristics

Rated conditional short-circuit current of an assembly (I _{sc})	The reinforced breaking capacity due to cascading in circuit-breaker combinations is maintained. The worst-case situations have been tested.
Rated insulation voltage (U _i)	800 V AC
Rated operational voltage (U _e)	690 V AC
Rated impulse withstand voltage (U _{imp})	8 kV
Network frequency	50/60 Hz
Degree of protection	IPxxB
Degree of pollution	3
Overvoltage category	III

Additional technical characteristics

Reference temperature	40 °C
Operating temperature	-25 °C to 55 °C

Installation

Directly on the mounting plates of horizontally mounted **ComPacT NSXm** devices in the enclosures.

For details on mounting plates, refer [page C-3](#).

It can also be mounted downstream of vertically mounted **ComPacT NSXm** devices in the enclosures. In this case, the Lineryy DP is mounted on a depth-adjustable modular rail.

Note: Electrical characteristics > [page D-27](#)

Screw distribution blocks

Distribution blocks

IEC/EN 60947-7-1, IEC/EN 61439-1 & 2

Description

- Single-pole or four-pole distribution block that can be installed on a standard DIN rail or on a mounting plate.
- Compatible with PrismaSeT G and P, Pragma, Mini Pragma and Resbo series switchboards.
- Incomers and feeders are connected to screw terminals that accept rigid or flexible cables with ferrule.
- Optional: additional neutral terminal strip for four-pole distribution block.

Advantages

- Simplified power supply for main incomers.
- Easy phase balancing.
- Easy, effortless cabling due to excellent accessibility.
- Visible cabling.
- Insulation between phases.
- The single-pole distribution blocks are adjacent and bridgeable via the second incoming hole for parallel connection.

Quick device feeders

Device feeders

IEC60947-7-1 and IEC61439-1 and 2

Description

- Distribution over full rows of modular devices.
- The distribution block is generally supplied by busbars in enclosures and cubicles.
- Easy phase balancing.
- Mix of devices and functions in the same row.
- Installation ≥ 160 A: clipped onto the back of a modular rail or screwed onto a solid or pre-slotted plate

Horizontal comb busbar for 27 mm pitch for NG125

Device feeders

IEC 60664-1 Description

Comb busbars make it easier to install NG125 circuit breakers.

- Supplied with 2 lateral end-caps, IP 2.
- Outgoing feeders can be marked.
- Cutting markings on the copper bars and the insulating material.

NG125		27 mm poles, cuttable							
Number of poles		1P		2P		3P		4P

Horizontal comb busbar for 18 mm pitch for Acti 9

Device feeders

IEC 60947-7-1, IEC 61439-2

Description

Comb busbars make it easier to install Acti 9 circuit breaker.

- Can be sawn and cut in a single pass.
- Supplied with two IP20 lateral end-caps except for 57 module references.
- Cutting marks on the insulating material for easy adaptation.
- The phases are identified by symbols on each side of the comb busbar for installation in all positions.
- The special comb busbars for circuit breakers with 9 mm auxiliaries have a 9 mm gap for inserting IOF and ISD.

Horizontal comb busbar for 9 mm pitch for Acti 9, C60

Device feeders

IEC 60439-1 Description

- Easy, reliable mounting of 1P+N and 3P+N, TL, CT, ID, V, BP and Cm switchgear: tooth positioning opposite the device terminals is ensured by indexing of copper parts

C60/ID Group Feeder comb busbars contain two different parts:

- connection of Group Feeder switchgear: C60 (3P + N) or ID (3P + N) circuit breaker in 18 mm modules, powered by cables, through the bottom, directly by the terminals
- connection of Acti 9 switchgear in 9 mm modules.

Auxiliary connections

Terminal blocks and bars

Connectors

For plug & play interconnection between electrical switchboard for control and communication wires.

RJ45 female-female connector with mounting plate

Connector type	8 wires RJ45; 1 Gbps
For ethernet cable	CAT5e SFTP (IEC 11801) or higher
Degree of protection	IP67 for direct mount
Dimensions (H x W x D) (mm)	75 x 70 x 45
Catalogue number	LGY4230

8P male-female connector with mounting plate

Rated operational current at 40 °C (Ie)	12 A
Rated operational voltage (Ue)	320 V
Rated impulse withstand voltage (Uimp)	4 kV
Connection method	Push-in spring connection
Connection capacity	Input 8
	Output 8
Dimensions (H x W x D) (mm)	75 x 70 x 45
Wire size	0.2 to 2.5 mm ²
Catalogue number	LGY4231

Terminal block

For distributing auxiliary voltages in power and regulation equipment.

Terminal block for auxiliary wiring

Standards	IEC	UL
Rated operational current at 40 °C (Ie)	12 A	20 A
Rated operational voltage (Ue)	250 V AC	300 V AC
Rated impulse withstand voltage (Uimp)	4 kV	
Connection capacity	Input 10 (grey)	
	Output 2 x 10 (grey)	
Dimensions (H x W x D) (mm)	61 x 48 x 45	
Wire size	0.2 to 2.5 mm ²	
Tightening torque	0.5 to 0.6 N.m	
Composition	3.5 18-mm modules	
Catalogue number	LVS04228	

Bus duct

Four-pole auxiliary bus duct

	Duct for 4 conductors
	166 tap-off points with Faston connectors, per linear meter
Rated operational current at 40° (Ie)	32 A
Rated insulation voltage (Ui)	660 V AC
Width (mm)	1755
Composition	Supplied with 2 end clamps and 1 lateral clamp for mounting on cable-tie supports
Catalogue number	LVS04203

USB and RJ45 ports Ø 22

Presentation

For safe and upgradeable electrical switchboards

> 100 % reliable and in compliance with existing standards

All the components (switchgear, splitter blocks, prefabricated connections, etc.) have been designed to work together. All switchboard configurations have been tested.

> Optimised, upgradeable installation

With PrismaSeT G, you can build the right switchboard for your customer, sized precisely to fit costs and needs.

Thanks to the organisation around functional units, the installation evolves simply while preserving its original performance.

> Ease of setup

The complete accessibility of all mounting and connection points facilitates assembly and cabling in the workshop. The functional units are clearly identified: operations are intuitive and reliable, and connection and checking are performed naturally.

- > Safety of people and property
- > Continuity of service
- > Optimisation and upgradeability
- > Ergonomics and complete accessibility
- > Controlled costs (installation, maintenance) and delivery times
- > Seismic characteristics: 2,5G without accessory

Presentation

Metallic indoor enclosures to compose.
Commercial buildings: hotels, offices, shops, etc.
Industry: technical room, etc.

Enclosure delivered flat in kit form:
total accessibility
Designed for electrical continuity

Up to 630 A

- 630 A
- IP30/IP4X
- IK07/08/10
- Seismic characteristics: 2,5G

Description

Steel sheet metal with electrophoresis treatment + hot-polymerised polyester epoxy powder.

Enclosure:

- width: 595 mm, 850 and 305 mm
- height: 385 to 2030mm
- depth: 205 mm without door / 259 mm with door (including the handle : 13.5 mm)
- properties of metal enclosures > page G-15.

Main characteristics

PrismaSeT G IP30 - IP4X enclosures

Rated operational current	$I_n = 630 \text{ A}$ - $I_{sc} = 50 \text{ kA}$, $I_{cw} = 25 \text{ kArms} / 1 \text{ s}$, $I_{pk} = 53 \text{ kA}$
Colour	White colour RAL 9003
Standards conformity	EN 62208, IEC 61439-2
Degree of protection	IP30 without door, IP40 with door IP41 with canopy + door, IP43 with canopy + door + gasket
Degree of protection against mechanical impacts	IK07 without door IK08 with door (transparent) IK10 with plain door
Seismic characteristics	2,5G without accessory (IEC 60068-2-57)
Isolation	Class 1
Doors	■ Plain or transparent, opening to right or left, 130° ■ Earthed by design ■ Supplied with a handle and keylock (key 405) ■ Distance behind door = 58 mm (possibility of push-buttons, lamps installation). ■ 2 closing points on 15- to 24-module doors ■ 3 closing points on 27-, 30-, 33- and 36-module doors.

E

Wall-mounted and floor-standing enclosures

Up to 630 A

IP30, 630 A wall-mounted and floor-standing enclosures

Reversible doors (opening 130° to left or right), supplied equipped with a handle and keylock (key 405).

Equipped with a door the IP30 enclosure reaches IP4X.

■ To create switchboard combinations (horizontal combination of enclosures of the same height), use a basic enclosure plus enclosure extensions, or W300 ducts.

■ Enclosure extensions are supplied with a combination kit.

■ In case of floor-standing enclosure combination, cables can be run on the sides of the plinth (diameter ≤ 140 mm).

Wall-mounted and floor-standing enclosures

Combination kits

Up to 630 A

Combinations

To make the combination more rigid, particularly during transport, it is mandatory to use a set of cross-members secured to the rear of the switchboard.

A combination kit is delivered with each duct and each enclosure extension.

It is sometime necessary to use a combination kit (catalogue number LVS08816) in addition to those already delivered.

Combination kits	Horizontal					
Possible combinations						
For enclosure W600/W300	1 wall-mounted enclos. + 1 duct	1 wall-mounted enclos. + 2 ducts	1 wall-mounted enclos. + 1 enclos. extension	1 wall-mounted enclos. + 1 duct + 1 enclos. extension	1 wall-mounted enclos. + 2 ducts + 1 enclos. extension	1 wall-mounted enclos. + 3 ducts + 1 enclos. extension

Wall-mounted and floor-standing enclosures

Lifting accessories - Installation

Up to 630 A

Lifting accessories

The lifting rings are used to move a single wall-mounted or floor-standing enclosure.
For combined enclosures, use the lifting/reinforcement cross-members (see below).

2 lifting rings for single wall-mounted or floor standing enclosures						
						
Catalogue numbers	LVS08801					
Characteristics	 Set of two lifting rings					
2 Lifting/reinforcement cross-members for combined enclosures W600 + W300				2 Lifting/reinforcement cross-members for combination wall-mounted enclosure W850 + duct W300		
						
Catalogue numbers	LVS08812	LVS08811	LVS08811	LVS08813	LVS08814	LVS08826
Characteristics						
Have 2 types of holes: for lifting and for mounting on a wall						

Installation possibilities

Switchboards can be mounted on a wall in three manners: with the hook-on rail system, via the inside of the enclosure or using external wall-mounted brackets.
Combined enclosures can be mounted using the lifting/reinforcement cross-members set of two lifting/reinforcement cross-members.

	Hook-on rail system	Mounting via the inside	Mounting using the external wall-mounted brackets
			
Catalogue numbers	Delivered with the enclosure	-	LVS08804
Characteristics	The enclosure comes with 2 cross-members secured to the back of the enclosure (top and bottom) and a support rail (with levelling adjustment) for screw-mounting on the wall. The enclosure is easily mounted on the hook-on rail system. End the fixation with 2x 8mm diameter screws, at the bottom of enclosure	The enclosure can be mounted through the spacers in the 4 holes provided on the enclosure using 8 mm diameter screws (2 knockouts can be removed if necessary to provide 2 other holes).	4 external wall-mounted brackets.

Plinth raiser

100 mm for floor-standing enclosure			
			
Catalogue numbers	LVS08805	LVS08806	LVS08807
Characteristics	For basic floor-standing enclosure or extension. W = 600 mm	For basic floor-standing enclosure or extension. W = 850 mm	For a duct. W = 300 mm

Trunking spreader

Trunking spreader	
	
Catalogue number	LVS08824
Characteristics	For a professional-looking connection between the trunking and the enclosure. Can be installed at the top or bottom. The spreader is marked for cut-outs for standard trunking sizes. The maximum capacity is two 250 x 80 mm trunking sections.

Mounting of devices on doors

Type	Plain door with cut-out W600, W850
	
Catalogue numbers	Plain door + LVS03928
Characteristics	Inclined visor by 30 °. Allows mounting of measurement, inspection, indication 72 x 72, 96 x 96, Ø 16 or Ø 22 mm, 45 x 45 devices. See page C-38.

Earthing braid

The earthing braid is used to earth a door or partial door with devices.

	Earthing braid, 6 mm ²	Earthing wire, 6 mm ²
		
Catalogue numbers	LVS08910	LVS08911
Characteristics	Equipped with a 4 mm diameter lug at one end and a 6 mm diameter lug on the other. L = 200 mm	Equipped with a 5 mm diameter lug at one end and a 6 mm diameter lug on the other. L = 200 mm

Wall-mounted and floor-standing enclosures

Gland plates

Up to 630 A

Plain metal gland plates

Enclosures (wall-mounted, floor-standing, ducts) are supplied with a plastic gland plate installed on the top or bottom for wall-mounted enclosures and the top for floor-standing enclosures. For some connections needs, the existing plastic gland plate can be replaced by this metal gland plate.

Plain metal gland plates

Used with	Wall-mounted or floor-standing enclos. W600 / 850 mm	Duct W300
Catalogue numbers	LVS08870	LVS08874

Interface metal plates with cut-outs

The enclosures (wall mounted and floor standing enclosures and ducts) are supplied with a plastic gland plate fitted on the top or bottom plate. This plastic gland plate can be replaced by an interface plate with cut-outs for special cable entry systems made of an insulating material (plain, with knockouts or membrane-type).

Great capability for meeting the requirements of your installation

PB 119167_aps

> 100 % reliable and in compliance with existing standards

All the components (switchgear, splitter blocks, prefabricated connections, etc.) have been designed to work together. All switchboard configurations have been tested. Even the most demanding.

> Optimised, upgradeable installation

PrismaSeT G IP55 is the only switchboard in this category designed as a "kit". All configurations and combinations are possible, with full access. Thanks to the organisation around functional units, the installation evolves simply while preserving its original performance.

> Ease of setup

The complete accessibility of all mounting and connection points facilitates assembly and cabling in the workshop. The functional units are clearly identified: operations are intuitive and reliable, and connection and checking are performed naturally.

Tested

Lifting

	Lifting rings
Catalogue number	LVS08396
Characteristics	Set of two, supplied with mounting hardware. The lifting rings are secured directly to the switchboard or to the mounting uprights.

Note: for combinations of more than two enclosures, the switchboard must be reinforced using mounting uprights (LVS08391).

Weatherproof enclosures

Mounting accessories

Up to 630 A

Mounting accessories

Upright		Plinth		
	Mounting uprights	Plinth gusset	Plinth cover panel (for enclosure)	Plinth cover panel (for duct)
Catalogue numbers	LVS08391	LVS08392	LVS08393	LVS08394
Characteristics	- W = 1950 mm - Colour: RAL 7016 - Supplied with: - two adjustable fixing brackets, - one joint for combination with a plinth or another upright. - Leave space behind the switchboard for cable running and to improve ventilation. 	- H = 150 mm - Colour: RAL 7016 	- W = 600 mm - Colour: RAL 7016 	- W = 300 mm - Colour: RAL 7016 
Quantity to order	For one enclosure, order two uprights. For each enclosure extension or duct, order one additional upright.	For the basic enclosure, order two gussets and one 600 mm wide plinth cover panel. For each enclosure extension or duct, order one additional gusset and the corresponding cover panel.		

Mounting example				
	On uprights	On plinth	On wall structure	Free-standing structure
				
Catalogue numbers	3 x LVS08391	3 x LVS08392 + LVS08393 + LVS08394	3 x LVS08391 + 3 x LVS08392 + LVS08393 + LVS08394	4 x LVS08391 + 4 x LVS08392 + 2 x LVS08393
Designation	3 mounting uprights	3 gussets + 1 plinth cover panel for enclosure + 1 plinth cover panel for duct	3 uprights + 3 gussets + 1 plinth cover panel for enclosure + 1 plinth cover panel for duct	4 uprights + 4 gussets + 2 plinth cover panels for enclosure
Remarks	The uprights are used to mount on a wall one or more enclosures combined horizontally or vertically.	The plinth, installed in the factory or on-site, raises the switchboard to protect it and facilitate spreading of cables arriving from a trough. The wall-fixing brackets supplied with the plinth ensure that the switchboard cannot topple over.	The supplied external brackets prevent the switchboard from tilting.	Assembly of 2 wall structures connected back-to-back. The switchboard is free-standing. Fixed to the ground and can be moved very easily with lifting rings ref. LVS08396. It can house one or more enclosures.

Mounting on a pole

2 reinforcement cross-members to support the enclosure

Catalogue number	LVS08395
Characteristics	The kit is used to mount an enclosure or an enclosure + duct combination, without drilling, to an I-beam or concrete pole that can be rectangular or cylindrical. The maximum circumference of the pole is 580 mm. Supplied with mounting hardware.

Canopy

Using	For wall-mounted enclosures W600	For duct W300
		
Catalogue numbers	LVS08386	LVS08387
Characteristics	- Installed on the mounting uprights or directly on the wall, canopies improve switchboard protection against vertically falling water and objects. - Colour: RAL 7016. - Supplied with: the hardware required for mounting on the uprights, the components required for combination with another canopy.

Grand plates

Up to 630 A

Metal interface plate with cut-outs

Enclosures are supplied with plain metal gland plates installed on the top or bottom panel of the enclosures (2 plates) or 300 mm wide ducts (1 plate).

These plates can be replaced by metal plates with cut-outs LVS08876 for special cable entry systems made of an insulating material (plain, with knockouts or membrane-type).

They are designed for entry of cables of different cross-sectional areas via the bottom of a switchboard while maintaining the IP55 degree of protection.

The gland plates are easy to install using the mounting kit (supplied with each gland plate) that positions and holds the nuts during installation.

This makes it possible to mount the gland plates using a single tool.

Weatherproof enclosures

Partial doors and functional units for partial door

Up to 630 A

Partial doors

Type	Plain	With cut-outs
		
4 modules (H = 200 mm) for enclosure from 11 to 27 modules	LVS08374	LVS08376
Installation	- On a wall-mounted enclosure at least 11 modules high (H = 650 mm). - The front must be completed with another door (plain or transparent). - Each enclosure or extension can be equipped with only one partial door.	
Caractéristiques	- Designed for two mounting plates with 22 mm diameter devices or Schneider Electric industrial sockets. - They are supplied with an insulating plain mounting plate that can be used to: - blank off a reserve hole, - install all types of devices (sockets, EPO devices, measurement devices). - The dimensions of the two holes are 201 mm x 111 mm.	
	- Hinges that open 170° - Equipped with a 8 mm male triangle insert (key not supplied).	

Plastic plates for equipping openings on partial doors

They can be installed:

- horizontally on the partial doors with cut-outs
- horizontally or vertically at any point on a door or side panel.

Type	Plain	For 22 mm diameter devices
		
Catalogue numbers	LVS08861	LVS08862
Characteristics	- Can be used to: - blank off partial doors with cut-outs - mount any type of device (EPO devices, measurement devices, sockets)	- For installation of eight 22 mm diameter devices (lights, switches, pushbuttons, etc.) - Supplied with 4 blanking plug

Weatherproof enclosures

Side panels

Up to 630 A

Side panels with cut-outs

These panels are designed to replace the standard side panel.
They can be mounted on the left or right-hand side.

Side panels with cut-out

Door accessories

Up to 630 A

Locks

- The small plain and transparent doors (7 to 23 modules) are supplied with a small handle comprising a barrel lock no. 405.
- The large plain and transparent doors (27 to 33 modules) are supplied with a large handle comprising a barrel lock no. 405.
- The partial doors are supplied with an 8 mm male triangle insert.
- All doors can receive as optional equipment:
 - a large or small handle with a barrel lock no. 405. The latter can be replaced by other barrel locks or special inserts
 - a large EURO handle, supplied without a barrel lock
 - door inserts (squares, triangles, double bars, screwdriver slots).

Premounted metallic indoor enclosures can be ordered with a single catalogue number.

An enclosure + modular rails + front plates + blanking plates + a plastic gland plate + an earth bar + a template for drilling wall-mounting holes.

One product reference = a complete modular enclosure ready to be equipped

■ 160 A
■ IP30
■ IK07/08

Description

Steel sheet metal with electrophoresis treatment + hot-polymerised polyester epoxy powder.

Enclosure:

- width: 555 mm
- height: 480 to 1080 mm
- depth: 157 mm without door / 186 mm with door
- properties of metal enclosures > page G-15.

Main characteristics

Pack enclosures

Rated operational current	160 A
Colour	White RAL 9003
Compliance with standards	EN 62208, IEC 61439-1-2-3, NFC 61-910
Degree of protection	IP30 without door, IP40 with door, IP41 with canopy + door, IP43 with canopy + door + door gasket
Degree of protection against mechanical impact	IK07 without door IK08 with door
Insulation	Class 1
Doors	■ Plain or transparent, opening to right or left, 130° ■ By design, electrical continuity of moving parts (hinges...) ■ Supplied with a handle and keylock (key 405) ■ No possibility to install push buttons (distance behind door = 42 mm)
Mounting	Pack 160 enclosures easily integrated in using flush-mounting kit

The design of Pack 160 enclosures ensures easy device access and mounting. Optimised depth and an extra-thin door ensure perfect integration in all environments.

Models with 4, 5 and 6 rows are particularly well-suited for the incomer function:

- more space available for wiring of the incoming device
- optimised number of front plates.

Wall-mounted enclosures

Up to 160 A

Wall-mounted enclosures for modular devices

Enclosures include:

- 1 modular rail per row (L= 24 modules of 18mm).

The recessed rail at the top of 4, 5, 6-row enclosures is adapted for NSXm installation or INS/INV160 (for NG160, you can order LVS03008) and supplied with another rail + raisers to complete the row with modular devices.

- 1 front plate with cut-out per row (height depending on model)
- 1 plastic gland plate
- divisible blanking plates: 3 for 2 and 3 rows enclosures, 6 for 4 to 6 rows enclosures
- earth bar with 40 straps

Doors are:

- reversible, opening to left or right,
- supplied with a handle and barrel with keylock (key 405)
- barrel locks and inserts

Enclosure extension and metering

Functional units for extension enclosure

Up to 160 A

Enclosure extension for metering

Meters can be installed at different levels on the functional uprights of enclosures. Class 1: Depending on preferences and needs, meters can be installed directly on mounting plates equipped with earthing braids and combined with partitioning or front plates.

The mounting plates can be raised using M5 spacers.

Installation / Lifting accessories, IP degree level

Up to 250 A

Installation possibilities

Switchboards can be mounted on a wall in three manners: with the hook-on rail system, via the inside of the enclosure or using external wall-mounted brackets. Combined enclosures can be mounted using the lifting/reinforcement crossmembers set of two lifting/reinforcement cross-members.

	Hook-on rail system	Mounting via the inside	Mounting using the external wall-mounted brackets
			
Catalogue numbers	Delivered with the enclosure	-	LVS08804
Characteristics	The enclosure comes with 2 cross-members secured to the back of the enclosure (top and bottom) and a support rail (with levelling adjustment) for screw-mounting on the wall. The enclosure is easily mounted on the hook-on rail system. End the fixation with 2x 8mm diameter screws, at the bottom of enclosure	The enclosure can be mounted through the spacers in the 4 holes provided on the enclosure using 8 mm diameter screws (2 knockouts can be removed if necessary to provide 2 other holes).	4 external wall-mounted brackets.

Plinth raiser

	Plinth raiser
	
Catalogue numbers	LVS08805
Characteristics	For basic floor-standing enclosure or extension W = 600 mm

Lifting accessories

The lifting rings are used to move a single wall-mounted or floor-standing enclosure. For combined enclosures, use the lifting/reinforcement cross-members (see below).

	2 lifting rings for single wall-mounted or floor-standing enclosures	Lifting/reinforcement cross-members for combined enclosures
		
Catalogue numbers	LVS08801	LVS08812
Characteristics	Set of two lifting rings	Have 2 types of holes: for lifting and for mounting on a wall

Accessories to increase the degree of protection IP

	Canopy to increase the IP value from IP30 to IP31 (1)	Gasket for the door to increase the IP value from IP31 to IP43
		
Used with	1 wall-mounted enclosure	1 wall-mounted enclosure + 1 duct (2)
		
Catalogue numbers	LVS08830	LVS08841
Designation	The addition of a canopy over a wall-mounted or floor-standing enclosure equipped with a door ensures compliance with the degree of protection IP31.	When the switchboard is equipped with a canopy, a gasket for the doors ensures compliance with the degree of protection IP43. L = 5.3 m

(1) With a door, the IP30 become IP40

With a door + canopy, the IP40 become IP41.

(2) Whatever the duct position.

Gland plates, cable running

Up to 250 A

Gland plates

Enclosures (wall-mounted, floor-standing, ducts) are supplied with a plastic gland plate installed on the top or bottom for wall-mounted enclosures and the top for floor-standing enclosures.

The existing plastic gland plate can be replaced by this metal gland plate or by an interface plate with cut-out.

Designing PrismaSeT power circuits

Presentation and approach

The PrismaSeT G system takes into account the installation and connection conditions of Schneider Electric devices.

The entire installation complies with standard IEC 61439-1 and 2 of tested switchboard.

PB115625_016_enp3

Electrical characteristics

In the following pages you will find a number of examples, validated for PrismaSeT switchboards, intended to assist in determining the busbars as well as the upstream and downstream connections for the installation.

The examples assume that the devices have already been selected.

A complete process involves a number of steps before making final choices (transformer, conductors, protection, etc.).

Schneider Electric offers a number of tools to assist in designing a complete installation (technical guides, software).

Busbar sizing

The factors that must be taken into account in determining the size of busbars include:

- the diversity factor.

Not all the loads supplied by a set of busbars are used at full rated load or at the same time. The diversity factor is the means to determine the maximum load current used to size the busbars.

Standard IEC 61439-1 and 2 §4.7 specifies the table below:

Number of circuits	Rated diversity factor (RDF)
2 and 3	0.9
4 and 5	0.8
6 and 9	0.7
10 and more	0.6

- the degree of protection IP.
- the ambient temperature around the switchboard.

Supply of devices for outgoers ≤ 630 A

Flexible copper bars with an insulating cover.

To determine the required sizes for flexible bars, see the tables starting on > [see page G-3](#) which indicate the correct size for each type of connected device.

- an insulated flexible bar (not connected) must meet standards IEC 60243-1, (dielectric, > [see page G-3](#)), NFC 32201 (insulation) and IEC 60332-1 (fire)
- a flexible bar connected to a device in an enclosure must comply with standard IEC 61439-1 and 2.

Cables

To determine the cables required, see the tables. on > [see page G-5](#).

They can be used to determine:

- the size of cables as a function of:
 - the circuit breaker rating
 - the current
 - the ambient temperature around the switchboard
- the permissible current for individually tied cables or touching cables as a function of:
 - the size of the cables
 - the degree of protection for the switchboard.

Rapsody software

Easy design with

> [see page B-20](#)

Designing connections ≤ 630 A

Device connections

Electrical characteristics

Flexible copper bars with an insulating sheath

Switchboards that comply with standard IEC 61439-1 and 2

It is imperative to use the values indicated below that have been validated for the installation of devices in PrismaSeT switchboards.

The parameters determining the size of flexible bars are:

- the environment in which the devices are installed:
 - position in the enclosure
 - dimensions of other conductors in the circuit
 - ambient temperature around the switchboard
- the characteristics of the connected devices:
 - device heat losses
 - the type of installation (horizontal or vertical)
 - the type of device (fixed or withdrawable).

Only the equipment manufacturer with in-depth knowledge on:

- the characteristics of the installed devices
- the configuration of the installation in the enclosure can provide the correct sizes of flexible bars for a given permissible current.

Insulated flexible bars brings flexibility, easy and quick installation.

Insulated flexible bars are better solution than cables:

- better insulation temperature withstand (125 °C for bars, 105 °C for cables) and a larger exchange surface for an equivalent size, i.e. a smaller size for a given current
- greater rigidity offering better electrodynamic characteristics for short-circuit currents
- no intermediate parts (lugs) for a direct connection between the device and the busbars therefore less temperature rise and less risk of error
- fast implementation of prefabricated connections already cut to length, formed and drilled.

Technical characteristics

- thickness of the insulation: variable depending on the bar size, 2 mm on average
- rated insulation level $U_i = 1000$ V
- impulse withstand voltage $U_{imp} = 12$ kV
- maximum withstand temperature of insulating material = 125 °C.

Connection

In all enclosures with IP ≤ 55

- the switchboard internal temperature is 60 °C
- the withstand temperature of the insulating material is 125 °C.

If the withstand temperature of the insulation is only 105 °C, use the next largest flexible bar.

The bar sizes (S) indicated below take into account the derating curves of devices.

Connection of devices and distribution blocks to busbars

Designing connections ≤ 630 A

ComPacT circuit breakers NSX100 to 630

ComPacT circuit breakers NSXm up to 160

Electrical characteristics

Cables

Schneider Electric provides cabling recommendations according to the rating of the circuit breaker.

The size of cables must be selected according to:

- the level of current
- the ambient temperature around the conductors
- the degree of protection for the switchboard.

When mounting Schneider Electric prefabricated connections, short terminal shields can be used or not if the function is already integrated in prefabricated connections.

Note: For some devices, it is recommended to use Schneider Electric prefabricated connections. If not, switchgears must be equipped with long terminal shields for personnel safety.

Designing the PEN conductor

Power circuit

Electrical characteristics

Size of PEN protective conductor

Practical guidelines

The size of the PEN is determined in the same manner as a neutral conductor, i.e.:

- for copper single-phase circuits or sized $\geq 16 \text{ mm}^2$, it must be the same size as the phase conductors
- for copper three-phase circuits sized $> 16 \text{ mm}^2$, it can be:
 - the same size as the phase conductors
 - smaller on the condition that:
 - the current likely to flow in the neutral during normal operation is less than the permissible current for the conductor
 - the power rating of single-phase loads does not exceed 10 % of the total rating.

The conductor must be accessible to enable connections both in the factory and on site, as well as checks on the tightness of connections.

Implementing the PEN protective conductor

Practical guidelines

According to standard IEC 61439-1 and 2, the practical guidelines for implementing the PEN are the following:

- at the entry to the assembly, the PEN connection must be next to the phase connections
- within the assembly, the PEN does not need to be insulated from the exposed conductive parts (except on sites where there is a risk of fire or explosion)
- the size of the conductor must be at least equal to that of the neutral
- the size must remain constant throughout the main busbars
- the change from a TNC to a TNS system must take place at a single point in the switchboard, via a marked neutral-disconnection bar that is accessible and can be dismantled to facilitate the impedance measurement of the fault loop
- after the TNS creation point, it is forbidden to recreate a TNC system.

The PE and the neutral must meet their specific requirements.

Connection of power cables

Electrical characteristics

- To ensure protection of persons, first connect the switchboard protective conductor to the earth electrode.
- Tie the cables as close as possible to the connections to avoid any mechanical stresses on the device terminals. When not using cable glands, also attach the cables near to the electrical switchboard.
- Cables must never be in contact with or passed between live conductors.
- Sharp edges of the framework must be protected where cables pass to avoid damaging the conductors.
- Comply with a minimum radius of curvature of 6 to 8 times the cable outside diameter.
- All power connections must be made with class 8.8 mounting hardware and elastic contact washers, tightened to the torque indicated in the table below.
- When connecting aluminium cables to copper terminals, use bimetal lugs or interfaces.
- Separate the different types of circuits into separate cable bundles (power, control, 48 V, 24 V, DC, AC, etc).

Cable bundles

Cable cross-sectional area (mm ²)	Max. number of cables per bundle
CSA ≤ 10	8
16 < CSA ≤ 50	4
CSA ≥ 50	Tie individually

Tying the cable bundles

Type of tie	Maximum I _{cw} (kA/rms 1s)	Distance between ties (mm)
Width: 4.5 mm Load: 22 kg	10	200
	15	100
	20	50
Width: 9 mm Load: 80 kg	20	350
	25	200
	35	100
	45	70

For cable sizes of 50 mm² or more, use 9 mm wide fixing ties.

Recommended tightening torque for mechanical and electrical connections with 8.8 class screws.

Diameter of screw	Tightening torque (Nm) (with nut + contact washer)
M3	1.5
M4	3.5
M5	7
M6	13
M8	28
M10	50
M12	75

Tools required for mounting and connection

Practical information

- Vacuum cleaner to clean the switchboards
- Ratchet wrench with sockets
- Torque wrench with sockets and ring bits to tighten the electrical connections to the correct torque (max. torque 50 Nm)
- Open-ended spanners (15 to 27 mm)
- Electrician's knife
- 7, 8, 10, 13, 16, 17 and 19 mm sockets
- Bit holder socket
- 4, 5, 6, 8 and 10 mm hexagonal-head bits
- Pozidriv no. 1, 2 and 3 bits
- Rubber mallet
- Level
- Measurement and inspection tools and instruments
- Drill
- Semi-circuit nosed pliers
- Cable-tie pliers
- Wire stripper
- Crimping tool
- Diagonal cutter
- Wire cutters
- Flat-nosed pliers
- Bit holder for screwdriver
- Extension
- Electric saw
- Jig saw
- Clamp for cubicle alignment
- Buzzer or tester
- 3, 4, 5, 5.5 and 8 mm flat screwdrivers
- Pozidriv no. 2 crosshead screwdriver (to mount handle)
- Hydraulic jacks that can be operated in horizontal position to lift cubicles and move them sideways if necessary
- Coloured, indelible and temperature resistant acrylic varnish
- Electric screwdriver

Seismic zone

Around the world can be found different zones with a specific seismic risk. These zones have been classified according to the Uniform Building Code (UBC).

Switchboard qualification

Tests are carried out on switchboards to ensure that they operate correctly (structural and functional integrity) under severe earthquake conditions and meet specific safety requirements.
The tests carried out to qualify these switchboards are described in the international standard IEC 60068-3-3.

Classification

From weak to strong earthquakes, PrismaSeT G has been tested in the following ground accelerations to guarantee the right performance on seismic risk.

IEC 60068 -3-3 Ground acceleration	Seismic characteristics			
References	General description	Richter scale magnitude	MSK Intensity	UBC Zone
AG2	Intensity from weak to average	< 5.5	< VIII	0 1
AG3	Intensity from average to strong	5.5 to 7.0	VIII to IX	2 3
AG5	Intensity from strong to very strong	> 7.0	> IX	4

PrismaSeT G is compliant up to level AG5 from IEC 60068-3-3 (2,5G) :

Compare PrismaSeT G Switchboards Performances with seismic Standard
Damping % - horizontal

Compare PrismaSeT G Switchboards Performances with seismic Standard
Damping % - vertical

Country	Standard	Parameters
PrismaSeT G	IEC60068-3-3	Up to level AG5
Russia	GOST 17516.1-90	Civil Market (Seismic intensity 8, all installation levels) or (Up to Seismic Intensity 9, Level 1 only)
Chile	ENDESA 1986	All seismic categories
Turkey	Seismic Turkish Code 2009	All seismic zones, all site class
Greece	EAK 2000	All soil types, Worst case
Australia	AS1170	All soil types, Worst case

Warning: use the seismic kit LVS04130 when using linergy BW > see page D-4

Standards

What is a standard?

A common reference

"A standard helps to define a common language between economic stakeholders (producers, users and consumers), to clarify and harmonize practices and to define the levels of quality, safety, compatibility, and least environmental impact of products, services and practices.

Standards facilitate trade, both national and international, and help to better structure the economy and facilitate the everyday life of everyone."

Afnor definition

IEC international standards

The IEC (International Electrotechnical Commission) is a worldwide organisation for standardisation comprising all national electrotechnical committees (IEC National Committees).

The object of the IEC is to promote international cooperation on all questions concerning standardisation in the electrical and electronic fields.

To that end, the IEC publishes International Standards.

Their preparation is entrusted to technical committees and any IEC National Committee interested in the subject dealt with may participate in the preparatory work.

National standards

In Europe

The IEC documents are first studied by CENELEC, which establishes:

- either a European standard (EN), often identical to the IEC standard, which then becomes the applicable national standard in all the member countries
- or, in the event of differences, a harmonisation document (HD).

Other IEC member countries

Each country is autonomous and can accept the IEC standard as the national standard, with or without modifications.

Even though they are IEC members, countries such as Japan and the United States continue to develop their own standardisation systems.

Countries without a standardisation system

It is possible to refer to an IEC standard in the framework of a project.

Standards

The different types of standards

There are different types of standards, including:

- management standards
- installation standards
- product standards.

Management standards

ISO 9004: Quality-management systems - guidelines for performance improvements. Used in setting up a quality-management system.

ISO 9001: Quality management systems - requirements. Used for certification audits.

ISO 14004: Environmental-management systems. General guidelines on the principles, systems and supporting techniques.

ISO 14001: Environmental-management systems. Specification with guidance for use.

The majority of Schneider Electric development centres and factories are certified ISO 9001 and ISO 14001.

Low voltage installation standards

The set of IEC 60364 standards defines the main principles and rules for the design and the mounting of the electrical installation:

- determining general characteristics of installations
- protection
- selection and installation of equipment
- verification and maintenance of installations.

Switchgears standards

They apply to devices or assemblies and are aimed at ensuring correct operation and safety of the concerned products:

- standards on low voltage switchgear and controlgear:
 - IEC 60947-1: general rules
 - IEC 60947-2: circuit breakers
 - IEC 60947-3: switches and disconnectors
 - IEC 60947-4: contactors
 - IEC 60947-7-1: terminal blocks for copper conductors
 - IEC 62208: empty enclosures.
- The IEC 61439 switchboard standard:
 - characterizes the electrical switchboard and specifies the design, construction and verification rules
 - describes in detail all low voltage switchgear and controlgear: definitions, technical characteristics, conditions of use, and construction and verification requirements
 - applies to power switchgear and controlgear assemblies (PSC assemblies) whose rated voltage does not exceed 1000 V in alternating current or 1500 V in direct current.

Regulations in a given country may make certain standards legally binding and may also create additional safety requirements.

In addition to providing proof of the conformity of its quality-management system, a product manufacturer can demonstrate the quality of products by providing proof that the design and manufacture comply with the requirements in the applicable standard.

Proof of conformity may be a declaration by the manufacturer or a certificate supplied by an independent organisation.

> More informations in [pages B-14 to B-17](#).

Design and manufacture.

Switchgear and controlgear assemblies.

Switchgear and controlgear.

Installation.

Standards

Enclosure standards

Standard IEC 62208 lay down definitions, classifications, characteristics and test requirements for enclosures used for switchgear and controlgear assemblies.

They apply to empty enclosures before installation of the devices by the panelbuilder, as supplied by the manufacturer.

They apply to one-piece enclosures and to enclosures supplied in kit form.

Type tests of standard IEC 62208

- 1 - Static load
- 2 - Hoisting
- 3 - Axial loads of metal inserts
- 4 - IK code
- 5 - IP code
- 6 - Thermal stability
- 7 - Resistance to heat
- 8 - Resistance to abnormal heat and to fire
- 9 - Dielectric strength
- 10 - Protective-circuit continuity
- 11 - Weather resistance
- 12 - Corrosion resistance
- 13 - Marking

CE marking

CE marking is a regulatory symbol attributed under the sole responsibility of the manufacturer and intended for the verification authorities of the European countries that enforce the European regulations.

It allows free circulation of a product in the European Union and certifies that it complies with the basic requirements in all the applicable European directives.

CE marking is not a quality symbol and does not indicate conformity with a standard

The CE declaration is intended exclusively for the authorities in charge of verifying compliance with the applicable regulations and it is drafted, signed and held for presentation to the authorities by the manufacturer.

For the PrismaSeT range, the declaration is the responsibility of the Schneider Electric unit that has designed and developed the product.

For LV switchboards, the declaration is the responsibility of the panelbuilder.

The following products receive CE marking:

- all products that are liable to endanger the safety of persons, animals and property (LV directive)
- all products likely to emit electromagnetic disturbances above a standardised threshold or to be disturbed during operation (EMC directive).

Consequences:

- the PrismaSeT range falls under the LV directive only
- LV switchboards are covered by the LV directive and may also fall under the EMC directive, depending on the type of devices incorporated.

For the PrismaSeT range, CE marking is applied:

- on the packing of "mechanical" components
- on the product itself for "electrical" components.

For the LV assemblies created by the panelbuilder, CE marking is applied:

- on the packing
- on the rating plate (if applicable)
- on one of the documents accompanying the switchboard when it is shipped.

Standards

Schneider Electric enclosures comply with standard IEC 62208 for empty enclosures. The sheet metal used for Schneider Electric enclosures receives an anti-corrosion epoxy electrophoresis treatment and a coating of a thermosetting, polyester-resinmodified epoxy powder for colour and appearance. This two-coat system provides excellent finish and corrosion protection. The characteristics of this coating are much better than those of traditional epoxy powders:

- improved colour stability
- wider operating temperature range.

Mechanical properties of enclosures

Static load on doors, wall-mounted and floor-standing enclosures and cubicles

Floor-standing enclosure	64 kg
Wall-mounted enclosure	48 kg
Floor-standing enclosure door	4 kg
Wall-mounted enclosure door	4 kg

Mechanical properties of powder coated surfaces

Test conditions

Test piece made of 1 mm thick steel sheet, degreased, iron phosphated, final rinsing with 100000 Ω cm DI water, 15 microns of anti-corrosion electrophoresis treatment and 35 microns of powder paint.

Adhesion (cross-hatch and pull-off)	class 0 required	(ISO 2409)
Impact strength ⁽¹⁾	> 1 kg/50 cm	(ISO 6272)
Mandrel bending test ⁽²⁾	< 10 mm	(ISO 6860)
Persoz hardness	300 s	(ISO 1522)

Artificial ageing test on powder coating

Test conditions: two tests carried out on the same 1 mm thick steel sheet test piece.

- cyclical damp-heat test:
 - as per standard IEC 68-2-30
 - six 24-hour cycles at temperatures higher than 40 °C
- continuous resistance to neutral salt mist:
 - the tests were carried out over a period of 400 hours, far more than the 48 hours required by the standard for indoor installations
 - as per standard IEC 68-2-11 and ISO 7253
 - 400 hours without blistering for normal surface on test piece
 - 250 hours for a scratched surface.

Evaluation of corrosion as per ISO 4628:

- adhesion: class $\leq$ 1
- blistering: degree 1 dim. 1
- rusting: Ri 1
- cracking: class 1
- flaking imp. 1 dim. 1
- propagation of corrosion under scratch with respect to the scratch axis: 3 mm max.

Chemical properties of powder coating

Tests carried out at ambient temperature on phosphated test pieces coated with a 150 to 200 micron film.

Test duration (months)		2	4	6	8	10	12
Acids	Concentration						
	Acetic 20 %						
	Sulphuric 30 %						
	Nitric 30 %						
	Phosphoric 30 %						
	Hydrochloric 30 %						
	Lactic 10 %						
	Citric 10 %						
	Soda 10 %						
	Ammonia 10 %						
Water	Distilled water						
	Seawater						
	Tap water						
	Diluted bleach						
Solvents	Petrol						
	High alcohols						
	Aliphatics						
	Aromatics						
	Ketones, esters						
	Tri-perchlorethylene						

Film intact.

Film damaged (blisters, yellowing, loss of shine).

⁽¹⁾ No cracking of the paint film after dropping a weight of one kilogram on the test piece from a height of 50 centimetres.

⁽²⁾ Film cracks over a length of 10 millimetres maximum.

Standards

Degree of protection

Standard IEC 60364-5-51 lists and codifies a large number of external influences to which electrical installations can be subjected, including the presence of water, solid objects, shocks, vibrations, corrosive substances, etc.

IP code

Standard IEC 60529 (IP code, February 2001) indicates the degrees of protection provided by an enclosure for electrical devices against access to hazardous parts, against penetration of solid foreign objects and against penetration of water. These standards do not apply for the protection against the risks of explosion or conditions such as humidity, corrosive vapour, fungus or vermin. The IP code is made up of two characteristic numerals and can include an additional letter when the actual protection for persons against access to the hazardous parts is better than that indicated by the first numeral.

The first numeral characterises the protection provided against the ingress of solid foreign objects and the protection of persons. The second numeral characterises the protection provided against the ingress of water with harmful effects.

1st numeral Protection of persons		2nd numeral Protection against ingress of water	
1 Protected against access with back of hand Dd381959 eps	Protection against ingress of solid objects Protection against solid foreign objects larger than 50 mm Dd381959 eps	1 Protected against vertically dripping water (condensation) Dd381966 eps	2 Protected against dripping water up to 15° from vertical Dd381967 eps
	2 Protected against access with a finger Dd381960 eps		
	3 Protected against access with a tool Dd381961 eps		
	4 Protected against access with a wire Dd381962 eps		
	5 Protected against access with a wire Dd381962 eps		
	6 Protected against access with a wire Dd381962 eps		
	Protection against ingress of solid objects Protection against solid foreign objects larger than 12.5 mm Dd381963 eps		
	Protection against ingress of solid objects Protection against solid foreign objects larger than 2.5 mm Dd381961 eps		
	Protection against ingress of solid objects Protection against solid foreign objects larger than 1 mm Dd381962 eps		
	Protection against ingress of solid objects Protection against dust (dust protected) Dd381964 eps		
	Dust tight Dd381965 eps		
		3 Protected against spraying water up to 60° from vertical Dd381965 eps	4 Protected against splashing water from all directions Dd381966 eps
		5 Protected against water jets from all directions Dd381970 eps	6 Protected against powerful water jets from all directions Dd381971 eps
		7 Protected against the effects of temporary immersion in water Dd381972 eps	8 Protected against the effects of continuous immersion in water Dd381973 eps
		9 Protected against close-range high pressure, high temperature spray downs 	

Standards

Additional letter

The additional letter is used only if the actual protection of persons is higher than that indicated by the first characteristic numeral of the IP code.

Additional letter	Protection
A	A Protected against access with back of hand
B	B Protected against access with a 12 mm diameter finger
C	C Protected against access with a 2.5 mm diameter tool
D	D Protected against access with a 1 mm diameter wire

If only the protection of persons is of interest, the two characteristic numerals are replaced by the letter "X", e.g. IPXXB.

Illustration of the above explanations:

Remarks

- The degree of protection IP must always be read and understood numeral by numeral and not as a whole.
For example, an IP31 wall-mount enclosure is suitable for an environment that requires a minimum degree of protection IP21. However an IP30 wall-mount enclosure is not suitable.
- the degrees of protection indicated in this catalogue are valid for the enclosures as presented. However, the indicated degree of protection is guaranteed only when installation and device mounting are carried out in accordance with professional standards that conserve the initial degree of protection.

IK code

Standard IEC 62262 defines an IK code characterising the capacity of products to resist mechanical impacts from all sides.

IK code	Impact energy (joules)
01	0.14
02	0.2
03	0.35
04	0.5
05	0.7
06	1
07	2
08	5
09	10
10	20

IK codes can be selected according to the risks of impacts on a given site.

	Site	Recommended IK
No risk of major impact	Technical premises	07
Significant risk of impact that can damage devices	Hallways	08 (switchboard with door)
Maximum risk of impact that can damage the switchboard	Workshops	10

Selection of enclosures according to the premises

Enclosure characteristics

The IP and IK degrees of protection provided by an enclosure must be specified as a function of the various external influences defined by standard IEC 30364-5-51, in particular:

- presence of foreign solid bodies (code AE)
- presence of water (code AD)
- mechanical stress (code not specified)
- capability of persons (code BA)
- ...

PrismaSeT switchboards are designed for indoor installation.

Unless the rules, standards and regulations of a specific country stipulate otherwise, Schneider Electric recommends the following IP and IK values based on French guide UTE C 15-103 (March 2004).

Using the table

- 1 Opposite the relevant premises, read the recommended IP and IK values.
- 2 The ■ symbol indicates the enclosure or cubicle satisfying the criteria of the UTE guide.
Any enclosure or cubicle with a higher degree of protection can also be used.
- 3 If several degrees of protection are possible (refer to the standard for more details) and the □ and ■ symbols are indicated (e.g. 24□/25*), enclosures that correspond to the higher degree of protection (■) are suitable for the lower degree of protection (□).

Example:

Selection of an enclosure for a laundry room.

Minimum degree of protection: IP21/IK02

A wall-mounted enclosure with a door (plain or transparent), a canopy and a gasket offer IP43/IK08 degrees of protection and are therefore suitable for this application.

Type of premises	Enclosures						
	Wall-mounted enclosure						IP55

Thermal management of switchboards

General

Thermal characteristics

A switchboard is designed for operation under normal ambient conditions. Most devices do not operation correctly outside a temperature range of -10 and +70 °C.

It is therefore important to maintain the switchboard internal temperature within this temperature range by:

- correctly sizing the switchboard during design
- correcting the temperature using suitable means.

Management of the internal temperature

Cooling

There are a number of way to dissipate heat from the switchboard.

The drawings below present the various means.

Convection

IP > 31

Ensured naturally in PrismaSeT enclosures.

IP ≤ 31

Forced-air ventilation

IP ≤ 54

Using fans, it significantly increases the thermal capacity of an enclosure.

Forced-air ventilation with air-air exchanger

IP > 31

On special request.

Forced convection and cooling

IP > 31

For these extreme cases, many installers prefer to set up the switchboards with other electrotechnical and electronic devices in air-conditioned electrical rooms.

Heating

The means employed to raise the internal temperature in a switchboard is a resistorbased heater, used to:

- avoid condensation by limiting variations in temperature
- ensure that the switchboard does not freeze.

Thermal management of switchboards

General

Thermal characteristics

Calculation of the internal temperature

Calculation of the temperature is the means to check that the enclosure can evacuate the dissipated power of the installed devices.

Important note

Correct thermal management of the switchboard depends on compliance with the installation requirements for the distribution system (power circuits).

Incorrect installation will have major consequences on the connected device, but almost none on the internal temperature of the enclosure.

Once the circuit has been correctly sized, it is necessary to check whether the assembly (devices + distribution system + cables) have a level of dissipated power $P(W) \leq$ the $P(W)$ that the enclosure can handle.

Method defined by IEC 890 technical report

This IEC guide for switchboards proposes a calculation method to determine three levels of internal temperature, depending on the dissipated power of the devices and distribution blocks installed in the switchboard.

Users can consult this document when it is necessary to determine precisely the internal temperature in view of optimising the switchboard.

On request, Schneider Electric can carry out a thermal study to check that the installed assembly and the thermal capacity of the enclosure are compatible.

Comparative method

A number of qualified and tested configurations serve as the basis for indicating the thermal capacity of PrismaSeT enclosures.

This is an empirical means to check whether the dissipated power of the desired configuration is close to that of a tested configuration.

Method using charts taking into account enclosure characteristics

To speed up calculations, Schneider Electric produces charts based on the company's experience and a number of assumptions on the installation.

They can be used sufficiently precisely to determine the variations in temperature and the dissipated-power levels for the different types of wall-mount enclosures, floor-standing enclosures and cubicles.

Thermal management of switchboards

Comparative method

Thermal characteristics

Comparative method

You will have no problems with your switchboard if:

- the volume of the enclosure is greater than that of the tested enclosure with a similar assembly
- the P(W) of the installed assembly is less than the P(W) of the tested configuration in the same size enclosure.

Pack enclosure, 3 rows, IP30

Diversity factor: 0.7

Ambient temperature around the switchboard:

35 °C

P(W) = 95 W

**Wall-mounted enclosure, 23 modules, IP30/IP4X**

Diversity factor: 0.7

Ambient temperature around the switchboard: 35 °C

P(W) = 170 W

Thermal management of switchboards

Comparative method

Thermal characteristics

Comparative method

You will have no problems with your switchboard if:

- the volume of the enclosure is greater than that of the tested enclosure with a similar assembly
- the P(W) of the installed assembly is less than the P(W) of the tested configuration in the same size enclosure.

Wall-mounted enclosure, 23 modules, plain door, IP30/IP4X

Diversity factor: 0.7

Ambient temperature around the switchboard: 35 °C

P(W) = 200 W

Floor-standing enclosure, 33 modules, IP30/IP4X

Diversity factor: 0.7

Ambient temperature around the switchboard: 35 °C

P(W) = 270 W

Thermal management of switchboards

Example

Thermal characteristics

Once the dissipated power of the devices has been determined and the enclosure with its IP selected, transfer the results (sum of the dissipated power and width of the device zone) to the chart corresponding to the enclosure IP.

Draw a line parallel to the others on the chart and read the corresponding difference in temperature.

For the given example, the heat rise is 22 °C at mid-height in the enclosure.

The internal temperature = external temperature + heat rise
 = 35 °C + 22 °C = 57 °C

57 °C < 60 °C stipulated by the standard, i.e. the result is acceptable for an IP30/IP4X all-mounted and floor-standing enclosures.

This gives roughly:

Internal temperature = 60 °C at mid-height in the enclosure for a low IP value.
 = 70 °C at mid-height in the enclosure for a high IP value.

Thermal management of switchboards

Charts

Thermal characteristics

Quick calculation charts for internal temperatures

The indicated internal heat rise is that measured at mid-height in the enclosure.

**Test conditions:**

600 mm wide enclosure mounted directly on wall without fixing lugs.

**Test conditions:**

600 mm wide enclosure mounted directly on wall without fixing lugs.

**Test conditions:**

600 mm wide enclosure on floor against a wall.

**Test conditions:**

Mounted on wall with fixing lugs or on mounting uprights.

**Test conditions:**

600 mm wide enclosure mounted directly on wall without fixing lugs or mounting uprights.

Thermal management of switchboards

Ventilation

Thermal characteristics

Switchboard ventilation

The air enters the lower section via the fans and exits the upper section:

- through a ventilated roof
- or through a ventilation opening.

The air throughput of the fans is determined by the equation:

$$D = 3,1 \times \left(\frac{P}{\Delta T} - KS \right)$$

The chart below can be used to determine the necessary throughput, based on the dissipated power, the difference in temperature (internal - external) and the exposed surface area of the enclosure.

Example

Consider an IP3X cubicle, 650 mm wide and 400 mm deep, containing components (devices, connections, busbars, etc.) dissipating 1000 W.

The ambient temperature around the cubicle is 50 °C.

Given that the average temperature at mid-height should not exceed 60 °C, the difference in temperature ΔT is equal to 60 - 50 = 10 °C.

The exposed surface of the cubicle (non adjacent to a wall or other cubicle) is 4.46 m².

(back = 1.3 m², front = 1.3 m², roof = 0.26 m², side panels = 1.6 m²).

What is the necessary throughput of the ventilation system?

The throughput can be calculated as:

$$D = 3,1 \times \left(\frac{1000}{10} - 5,5 \times 4,46 \right)$$

$D = 234 \text{ m}^3/\text{h}$.

In the range of PrismaSeT accessories, select a system with a throughput of 300 m³/h.

Calculation data

P : power dissipated by the devices, connections and busbars (in Watts)

P_r : power of the heating resistor (in Watts)

T_m : maximum internal temperature in the device zone (in °C)

T_i : average internal temperature (in °C)

T_e : average external temperature (in °C)

$$\Delta T_m = T_m - T_e$$

$$\Delta T_i = T_i - T_e$$

S : total free surface area of the enclosure (expressed in m²)

K : thermal-conduction coefficient of the material (W/m² °C)

K = 5.5 W/m² °C for painted sheet metal

D : ventilation throughput (in m³/h)

Note: the dissipated power of each device is provided by the manufacturer. Add approximately 30 % to account for the connections and the busbars.

Thermal management of switchboards

Heating

Thermal characteristics

Switchboard heating

The heating resistor, placed in the bottom of the switchboard, maintains the internal temperature 10 °C higher than the external temperature.

When the switchboard is not in operation, the heater compensates the dissipated power normally emitted by the switchboard.

The power of the heating resistor is calculated:

- using the equation: $P_r = (\Delta T \times S \times K) - P$
- or using the charts below, based on the exposed surface area of the enclosure and the desired difference in temperature.

Chart to determine the heating resistor for small wall-mounted enclosures (exposed surfaces $\leq 1 \text{ m}^2$)

Chart to determine the heating resistor for all types of enclosures

Calculation data

P : power dissipated by the devices, connections and busbars (in Watts)

P_r : power of the heating resistor (in Watts)

T_m : maximum internal temperature in the device zone (in °C)

T_i : average internal temperature (in °C)

T_e : average external temperature (in °C)

$$\Delta T_m = T_m - T_e$$

$$\Delta T = T_i - T_e$$

S : total free surface area of the enclosure (expressed in m^2)

K : thermal-conduction coefficient of the material ($\text{W}/\text{m}^2 \text{ } ^\circ\text{C}$)

$K = 5.5 \text{ W}/\text{m}^2 \text{ } ^\circ\text{C}$ for painted sheet metal

D : ventilation throughput (in m^3/h)

Note: the dissipated power of each device is provided by the manufacturer. Add approximately 30 % to account for the connections and the busbars.
