Description

These compact detectors provide automatic control for lighting loads. The detector can be mounted either flush into a ceiling tile or using a surface mounting box. The low profile design means the unit can be mounted in a narrow ceiling void. No external control boxes are required as the unit is self-contained. The simple plug-in connections reduce installation time. The optional infrared remote handset allows the user to override the set up on some models. VITM4-EBDSPIR - Key features of PRM Switching detectors include: Switching with lux level sensing Programmable via our programming handset Absence detection functionality User handset available to control on/off and lux levels
