

Please read these instructions before installation and retain for future reference

MAINLINE 3 CIRCUIT TRACK RANGE

JC88105

Mainline Three Circuit Track

(16 Amp max)
per circuit

Power Feed Left

Available in: Black or White

Important Information

It is recommended that luminaires are installed by a qualified electrician who should ensure that the installation complies with the current IEE wiring regulations BS7671: 2008. Any broken or damaged parts should be replaced as soon as possible. JCC will not accept responsibility for any claims arising from a sub-standard installation.

Important User Advice

Always switch off mains supply before fitting or servicing.

Cutting Track

When reducing the length of track i.e. cutting down, it is recommended that a piece of masking tape be wrapped around the intended cutting area, this will ensure the powder coated or plated finish does not lift and chip. It is recommended for a good electrical connection the installer should always mark out and cut track accurately using an engineers square prior to cutting.

Hint

Our recommendation would be to remove a section of material from the end of the track that is opposite to that of the Power feed. This would ensure a perfect connection and trouble free operation. Always ensure that the locking screw is tightened.

If you should experience any difficulties connecting Mainline 3 circuit components please check that they are correctly orientated. The locating channel inside the track will only allow the correct handed accessory to be inserted.

Profile & Dimensions

All dimensions in millimeters.

Note: The covers have been omitted for reasons of visual clarity: NEVER power up an installation in this way!
