

CT clamp

Home - extras - CT clamp

CT Clamp Product Description

zappi & eddi come with one wired CT clamp as standard.

The 22kW 3-phase zappi come with 3 CTs as standard.

If you would like to see real-time generation from your solar/wind system displayed on the LCD display of your product, you'll need an additional CT (additional option).

In some cases, extra CT clamps are required i.e for 3 phase installs.

The CT comes with a 5m cable. If a longer cable is required it can be extended using CAT5 Ethernet cable or why not consider using the myenergi harvi to connect the CT over wireless?
