

MPN: NLPRV

Product Name: Pressure Reducing Valve For Unvented Heater

Brand: Newlec

Category: Spares

Product Description: A pressure reducing valve is required if water pressure is above 4.2 bar. The Pressure Reducing Valve (PRV) is designed to reduce the water pressure entering an unvented heater. This can help to prevent damage to the heater and improve its efficiency.

Key Features:

- Reduces water pressure: A pressure reducing valve (PRV) reduces the water pressure entering an unvented heater. This can help to prevent damage to the heater and improve its efficiency.
- Protects against leaks: A PRV can also help to prevent leaks by reducing the water pressure. This is important because unvented heaters can be very high-pressure systems.
- Easy to install: PRVs are typically easy to install and can be done by a DIYer.
- Peace of mind: Knowing that your unvented heater is protected from high water pressure can give you peace of mind. This is especially important if you have young children or elderly adults in your home.

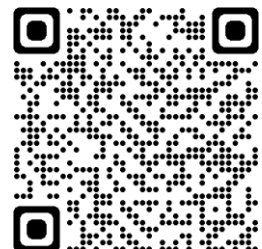

ETIM Class-9.0: Pressure reducing valve (EC010122)

ETIM Features:

- Maximum inlet pressure (bar): 4.2

Applications:

- Suitable for use with unvented heaters to regulate water pressure and prevent damage.
