

Traditional T-Series® Range Overview

ErP Regulations

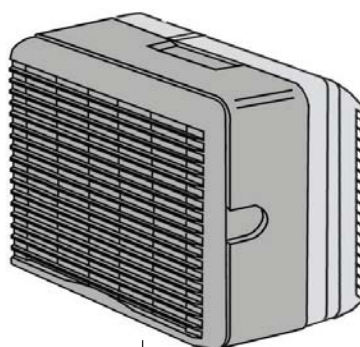

The introduction of the ErP regulations has given us the opportunity to review our product ranges and has enabled us to improve the way we stock and sell them.

The T-Series will now be purchased in modular form. Now supplied as a fan core plus optional application specific fitting kit, this gives you more flexibility in both stocking and installing the product. It also supports our Lo-Carbon drive to reduce waste and landfill.

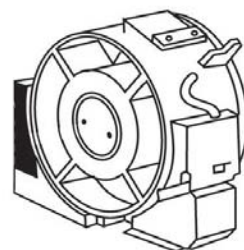

You will buy the Fan Core size that you need e.g. 9", and you will then select the kit you need for the application e.g. Window kit. This will give you the flexibility to use the Fan Core with any kit, as required. Within the product size e.g. 9", the Fan Core will be the same Stock Ref, regardless of the kit required.

The Super T-Series range of fans have not changed and continue to be purchased as one unit.
