HOW DO YOUR CRIMPED CONNECTIONS COMPARE? THE “4 M” RULE BY CEMBRE ASSURES COMPLIANT CRIMPED LUG CONNECTIONS

1. MEASURING

- Approved conductor correctly prepared
- Conductor strip length = lug barrel length

2. MATERIAL COMPOSITION CONTROL

- **Manufacturer** logo, product type & conductor size marked on lug
- Lug matches or exceeds current carrying capacity of conductor

3. MATCHING

- Maintained and certified crimping tool optimises performance
- Dies **matched** to tool type, connector type & size

4. MARKING

- Lug **marked** for die set confirmation and quality control
- Correct die profile, number, position & orientation of compressions, and crimp quality

...MEETING THE REQUIREMENTS OF **BS7609** CODE OF PRACTICE FOR THE
“INSTALLATION AND INSPECTION OF UNINSULATED COMPRESSION & MECHANICAL CONNECTORS...”
