CABLE STRUCTURE

- Copper wire bare, finely stranded acc. to DIN VDE 0295 Class 5 / IEC 60228 Class 5
- · Core insulation: PE
- · Core identification: brown, black, grey, green-yellow
- G = with protective conductor GN-YE
- · Cores stranded with optimal lay lengths
- 1. Screen: plastic-coated aluminium foil (St)
 - 2. Screen: braided screen of tinned copper wires, approx. coverage 85%
- Outer sheath: Special-PVCSheath colour: black (RAL 9005)
- · Length marking: in metres

- · resistant to: UV radiation
- · for outdoor use
- the materials used during manufacturing are cadmium-free, contain no silicone and are free from substances harmful to the wetting properties of lacquers
- optimal screening enables interference-free operation of frequency converters
- low coupling resistance ensures good electromagnetic compatibility
- low mutual capacitance of the individual cores due to PE core insulation and low screen capacity, enable low-loss power transmission

TESTS

- flame-retardant acc. to DIN VDE 0482-332-1-2 / DIN EN 60332-1-2 / IEC 60332-1-2, CSA FT1
- electromagnetic compatibility acc. to DIN VDE 0875-11 / DIN EN 55011

APPLICATION

Motor connection cable for frequency converters; secures EMC in systems and buildings with devices and machineries, which can emit electromagnetic interference fields that can impact the environment in an illegal manner. To be used as a connection cable involving medium mechanical stress for fixed installations and applications with occasional free movement in dry, moist and wet rooms and outside. Fur use in the automotive, food processing and packaging industry, in machine tools, handling equipment, pumps, fans, and transport belts. EMC= Electromagnetic Compatibility; in order to optimise EMC properties, we recommend a double-sided and all-round large contact area of the copper braiding.

NOTES

 the conductor is metrically (mm²) constructed, AWG numbers are approximated, and are for reference only
