EATON

Powering Business Worldwide

We make what matters work.*

At Eaton, we believe that power is a fundamental part of just about everything people do. That's why we're dedicated to helping our customers find new ways to manage electrical, hydraulic and mechanical power more efficiently, safely and sustainably. To improve people's lives, the communities where we live and work, and the planet our future generations depend upon. Because this is what really matters. And we're here to make sure it works.

Product highlights

Small emergency-stop button: Small device, big effect!

Our RMQ Small E-Stop small emergency-stop button is an innovative control characterized by a compact design and a novel illumination system. Its innovative 360° illuminated ring ensures improved signaling, maximizing the safety of machinery and systems as a result. In addition, its extensive approvals and certificates, combined with the modular approach behind the entire RMQ portfolio, mean that the button is remarkably versatile and easy to use in an extremely broad range of applications.

Modular system. For all kinds of applications.

The slim enclosures that characterize the RMQ series, also known as our RMQ Flat Enclosures, are the smallest of their kind and are known for taking safety-relevant components and giving them a sleek designer look. In addition, our flush RMQ Flat Rear electromechanical contact elements, which are easy to combine with other components in the RMQ range, provide maximum versatility in countless applications.

Identify machine states quickly with our MCI multicolor light indicator

The RMQ compact solution version of our MCI makes it possible to visually signal various machine states with up to five colors and two different flashing settings. While this would earlier require several devices, a single multicolor LED element can now display all required signals. And all of this in the form of a plug-and-play solution with an integrated cable, plug connector (M12), and enclosure.

Our multicolor M22 LED element provides a level of versatility previously unheard of in the area of conventional indicator lights. More specifically, the MCI can show up to 16 million colors and features various flashing frequencies and dimming capability that make it compatible with an exceptionally wide range of lighting conditions. Finally, the SmartWire-DT master is used to control and configure the multicolor element.

High brightness Small design High flexibility

Our high-performance LED elements can be smoothly integrated into our RMQ system, making it possible, for example, to illuminate indicator lights, illuminated pushbuttons, illuminated selector switch actuators, and illuminated emergency-stop button with a significantly increased degree of brightness. And the LEDs make a compelling case with their enormous brightness and vibrant colors, which enable them to clearly signal machine states that are easy to see even under intense lighting conditions. In fact, machine statuses are considerably easier to identify even when these elements are used outdoors under sunlight.

M22-RJ45-CAT6A bulkhead interface

Our M22-RJ45-CAT6A built-in socket provides reliable and easy access to control cabinet equipment, making it much easier to configure, program, and set the parameters for control cabinets. The socket features an impressive IP65 degree of protection and frequencies of up to 500 MHz, making it suitable for Ethernet applications with speeds of up to 10 Gigabits. The M22-RJ45-CAT6A works seamlessly with the RMQ-Titan portfolio and can be smoothly integrated into an extremely broad range of applications.

Control and operate machinery with flexibility

Visualization and control

Our new operator control and display elements fit in seamlessly with Eaton's general approach to machine control applications. The touch panels in the XV100 and XV300 series can be used both as HMIs and as HMI PLCs with CODESYS programming. Our new generation of devices also includes our ultra-fast and compact XC300 PLCs, as well as our remote XN300 I/O systems. Moreover, all these devices can be connected through a variety of fieldbuses. Finally, our XP500 industrial PC rounds out the range of products.

Control and signaling – the importance of design keeps growing

In order to meet our customers' need for premium and slim designs, we at Eaton have launched our range of RMQ Flat Design pilot devices. The flat front elements in the RMQ-Titan range of products are not just sophisticated, but also rugged and functional. On top of this, our RMQ AFX mounting module and its ease of installation make secure flush mounting a breeze.

Stylish, heavy-duty, and efficient

Our convenient all-in-one RMQ compact solution integrates the required cable, connector, and housing. The high degrees of protection in the front (up to IP69) and at the back (IP65) of these devices make them the perfect choice for applications in which protection from dirt or liquids is required. In addition, direct installation without any additional enclosures is perfectly possible even in machines used for woodworking and machining. All in all, it is a solution characterized by cost-effectiveness all the way from planning, through ordering, to stock-keeping and installation.

Emergency-stop pushbutton

Any I/O

Easy to configure Endless combinations.

Easy to select, configure, and order. Our Pushbutton Configurator provides a quick and comprehensive overview of all the pilot devices in the RMQ family and the numerous combination options available for the entire portfolio. With its intuitive user interface, the Configurator is the perfect way to find out what the right solutions for your specific needs are.

Easy to select, configure, and order

In addition, once all individual components have been selected, the configurator will show the assembled final product. Moreover, the configurator also makes it possible to easily configure complete devices that are put together in a custom-tailored manner. Once you configure your pilot devices, you will be shown a convenient parts list that you can then use to easily order all the components you need.

The configuration ID is used to uniquely identify configurations within this context.

Custom labels

The integrated Label Editor function can be used to order customized inscriptions and specific designs for pilot devices directly in the Pushbutton Configurator, making it possible to customize individual devices as needed.

- **Simple visual product selection**

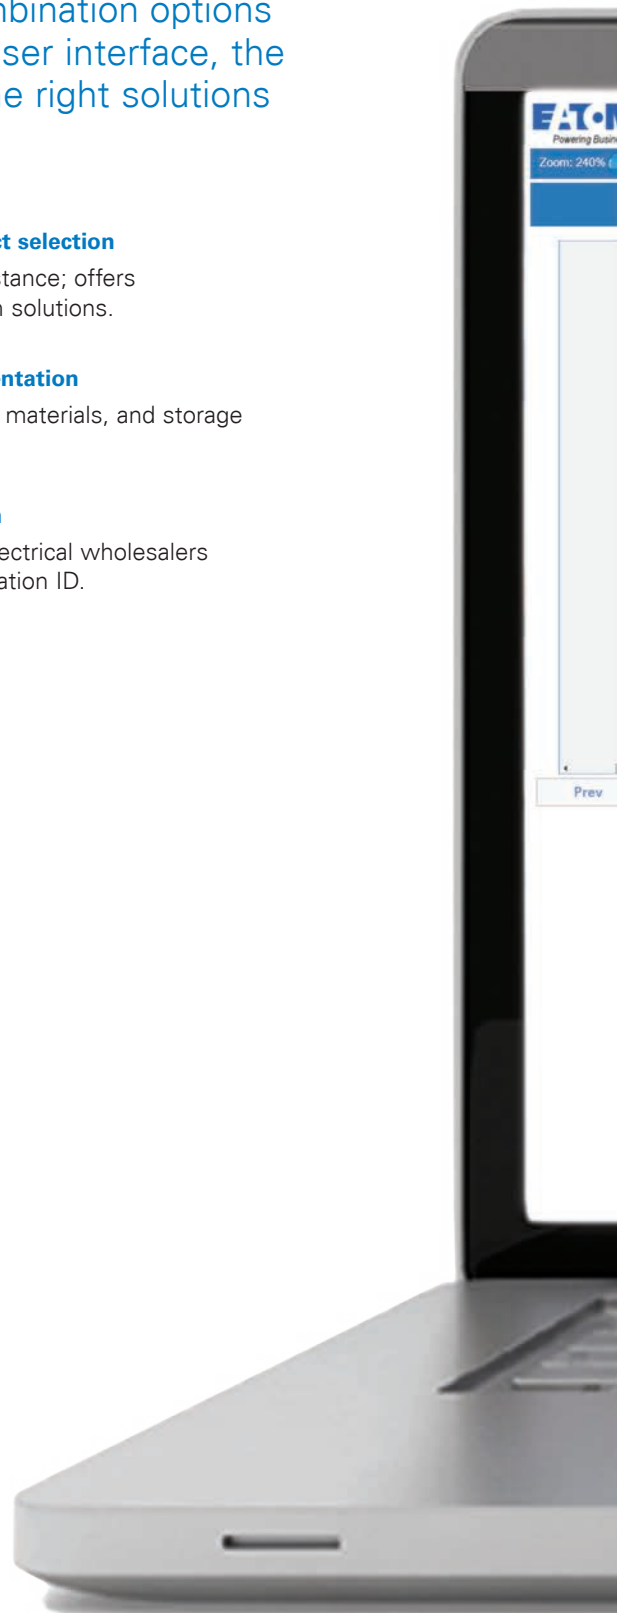

With intelligent assistance; offers standard and custom solutions.

- **Easy project documentation**

With images, bills of materials, and storage on an Eaton server.

- **Unique identification**

For customers and electrical wholesalers with 16-digit configuration ID.

Proven quality. Innovative system. RMQ-Titan

The pilot devices in the RMQ-Titan M22 and M30 series are characterized by enormous versatility, making them the perfect solution for a wide variety of applications and processes. Thanks to their high degree of protection, even in demanding environments.

and using their slim contact elements makes it possible to combine RMQ-Titan devices with minimal mounting depths. In addition, their ergonomic operators combine stylish design with optimum functionality, and operation is convenient and intuitive.

Contact and LED elements are available in two mounting depths for the flush mounting plates for both series. Moreover, the fact that the pilot devices can be connected to the SmartWire-DT communication system makes them ingeniously simple to wire.

- Modular front elements with a broad variety of fronts, bezels, colors, and functions available for selection.
- Contact elements for a large number of applications.
- Compact devices (RMQ compact solution) for use directly on machines.
- Emergency stop buttons designed to ensure functional safety on machines and systems.
- SmartWire-DT for digital device communication within the RMQ family.

For more information on cutting-edge control solutions for the next generation of machines, visit:
www.Eaton.com/rmq

Perfect protection. Versatile use. Emergency-stop pushbutton

Operate, signal, and switch with absolute safety: Our globally proven emergency stop buttons ensure that people, machines, and systems are thoroughly protected. Needless to say, Eaton offers just the right components in this case as well, with the options extending from key-operated models to models with illuminated rings.

- Contact elements for the front or base mounting of single-channel or dual-channel safety circuits.
- Mushroom shape with a diameter of 30 mm or 38 mm and palm shape with a diameter of 45 or 60 mm
- With / without key
- Non-illuminated / illuminated with standard LED or featuring a mechanical position indicator (green/red) at the center of the operator.

- Turn-to-reset / pull-to-reset.
- RMQ emergency stop / controlled stop buttons with a degree of protection of IP67, IP69K feature a tamper-proof design as defined in EN ISO 13850 and meet all applicable European and international safety standards
- Certified by the Employer's Liability Insurance Association.
- Can be used as heavy-duty RMQ compact solution for remote emergency stop operation.

Easy integration. Smart communication. SmartWire-DT.

SmartWire-DT provides the pilot devices in the RMQ family of products with communication capabilities, ensuring greater efficiency in all processes. In addition, Eaton has developed potentiometers and encoders designed to make input and adjustments easier.

- Replaces the control wiring of all components
- Facilitates a common communication platform for all components
- Provides one application software for all variants (wide variety!)
- Enables distributed intelligence in the components
- Operates with standard components
- Reduces the engineering effort and expense by up to 70 percent
- Reduces the wiring, test and commissioning times by up to 85 percent
- Offers an open concept and a business model (partner companies offer their own products)

Customized inscription for devices using the Label Editor function in the Pushbutton Configurator

Label your device individually in just a few steps:

- Open the Pushbutton Configurator by visiting: www.eaton.com/config/rmq
- System tab: select series, select parameters
- Layout tab: select and configure items
- Create individual labeling using the Labeleditor function with text and/or graphics Standard graphics can be selected from the library or your own graphics can be uploaded.
- Summary tab: Call up an individual configuration ID with one click and optionally have it sent by email for your own documentation.

For a quotation or order, please contact your local dealer or your local Eaton representative.

Ordering examples:

- Label M22-XST for label mount M22S-ST-X with custom inscription
basic part: 216482 M22-XST-*
* = configuration ID with position from the Pushbutton Configurator e. g. Configuration ID is 2202041400C0007E0 ==> the position is e.g. B -A1
Please order: 1 x M22-XST-2202041400C0007E0-A1
- Button plate in green with custom inscription
basic part: 216434 M22-XDH-*-*
1. * = Color (here "G" for green)
2. * = Configuration ID with position from the Pushbutton Configurator
Please order e.g.: 1 x M22-XD-G-220204140029738E0-A1
- Double actuator pushbutton with green / red button plate and custom inscription
basic part: 226770 M22-DDL-*-*-*
1. * = Color (here "GR" for green / red)
2. * = Configuration ID with position from the Pushbutton Configurator
Please order e.g.: 1 x 226770
M22-DDL-GR-220208C06231A7F0-A1
3. * is omitted
- Key-operated button, 3 positions, individual lock mechanism no.. MS1, customized inscription
basic part: 262521 M22-WRS*-MS*-*
1. * = quantity of positions
2. * = number of the individual lock
3. * = Configuration ID with position from the Pushbutton Configurator

LED series resistor elements

M22-XLED

Surface mounting enclosure

Flush mounting at the rear

Flush mounting at the side

LED resistor element

M22-XLED60/M22-XLED220

$U_e \sim/\equiv$ $12 - 30 V \sim/\equiv$	M22-XLED60	1 x	2 x	3 x	4 x	5 x	6 x	7 x	
	$U_e [AC/DC] \leq$	60 V	90 V	120 V	150 V	180 V	210 V	240 V	
	M22-XLED220	1 x							
	$U_e [AC/DC] \leq$	220 V							

LED test element

M22-XLED-T

① Test button

1) Only for 12 - 30 V elements

M22-XLED230-T

M22-XLED230-T	1 x	2 x
$U_e \leq$	400 V~	500 V~

① Test button

2) Only for 85 - 264 V elements

M22-PV.30/FK.../FIY1

Compact solutions. Heavy-duty components. RMQ compact solution.

Our convenient all-in-one RMQ compact solution integrates the required cable, connector, and housing and has them assembled in a non-detachable manner. The high degrees of protection in the front (up to IP69K) and at the back (IP65) of these devices make them the perfect choice for applications in which protection from dirt or liquids is required.

Easy plug-and-play installation is made possible by the devices' compact design. In addition, each compact device requires only one single article no., considerably simplifying all the processes extending from selection, through ordering and stockkeeping, all the way to installation.

The special housing provides protection against dust, water, cleaning products, and fine foreign particles, making these devices perfect for direct installation, e.g., in woodworking machines or other machine tools known for heavy exposure to dusts and liquids as a result of their challenging process environments. The front elements such as pushbuttons, illuminated pushbutton actuators, indicator lights, and controlled stop buttons can all be cleaned with pressure washers and steam jet devices making them ideal for environments with stringent leak tightness and hygiene requirements.

Robust and safe. Extremely high protection. FAK foot and palm switches

The rugged FAK foot and palm switches are equipped with a large actuator for quick and intuitive operation. In addition, their design is also tamper-proof. The FAK switches can be operated by hand, fist or foot. This allows operators to react quickly and safely in any situation to protect people, machines and systems.

The high mechanical shock resistance and the extremely high degree of protection (IP67, IP69K) make the FAK switches ideal for use in adverse environmental conditions.

FAK foot and palm switches with a red actuation surface on a yellow background are approved for use as emergency stop buttons. They perfectly match the characteristics required in DIN EN 60204, Safety of machinery – Electrical equipment of machines, and meet all relevant requirements. Moreover, the devices are tamper-proof (see IEC 60947-5-5) and feature positive-opening contacts (see IEC 60947-5-1).

- Developed, tested and constructed according to the IEC, EN or even the UL/CSA safety standards.
- Tamper-proof according to EN ISO 13850
- TÜV and/or BG (BG – Institute for Occupational Safety and Health/Germany)
- Large operating temperature range
- Extremely shock and vibration resistant

Fast and unmistakable. Clear & flexible signaling. SL4/SL7 signal towers.

SL4 and SL7 signal towers are used to continuously signal operating states for machines, systems, and processes. Their scope of application is extremely wide-ranging, going from production, through logistics, all the way to supermarkets. This is in no small part thanks to the fact that the fast and clear signaling they provide ensures smooth and safe operation in any environment.

The light and acoustic modules in the series can be configured flexibly both in terms of volume and of the specific visual signals they emit. This versatility is only further enhanced by the signal towers' high-performance LEDs, which ensure that visual signals are recognized even under adverse light conditions. Moreover, a high IP66 degree of protection makes it possible to use the signal towers in demanding environments, such as outdoors.

With a diameter of 40 mm / 70 mm, SL4 and SL7 signal towers feature extremely compact dimensions designed to save space. In addition, only a few steps are required in order to quickly and easily install and remove them, which can prove to be a tremendous advantage when packing and transporting control panels or machines.

Connecting the signal towers to a SmartWire-DT communication system or AS-Interface cuts down on wiring time and reduces the number of digital outputs required from your PLC. This, combined with the fact that data from the switchgear connected with SmartWire-DT will be processed in your PLC, ensures that operating states such as impending overloads will be detected and signaled with the signal towers immediately. The result? A marked increase in your systems' availability.

SL7 base modules with AS-i communication and rapid mounting and wiring system

SL7-FMS-ASI base modules combine the advantages of AS-Interface networks and rapid mounting and wiring systems in a single product. This not only makes operating the

signal towers much more efficient, but also significantly reduces the amount of time it takes to install them while making transportation considerably easier.

Fast Mounting system FMS

A modular base module consisting of an upper and lower section means that only one electrical connection is required. Even during transportation, the lower section can remain on the machine so that it does not have to be connected again afterwards.

The actual signal tower can then be mounted within seconds with the bayonet fitting, making installation and removal up to 50% faster.

AS-Interface

By combining control data and power in a single cable, the system reduces installation costs and complexity by up to 40%. Moreover, the SL7 AS-i base modules can optionally be used with an additional power supply unit if necessary for the application at hand. Finally, in order to make it possible to integrate SL7 devices into all common AS-Interface applications, the SL7-FMS-ASI product portfolio supports all current AS-i versions.

Detect positions reliably and accurately: mechanically, optically, capacitively and inductively.

Wherever exact positioning is required, safety/position switches with positively opening contacts are used. They are equipped with Cage Clamp or screw terminals and are available with metal and insulated enclosures. Their large connection area ensures that they can be wired quickly. Easy to fit and flexible operating heads are a further feature. Safety position switches protect both persons and processes. They are used to ensure that protective doors are safely locked and ensure a safe shutdown.

A variety of sensors makes it possible to use inductive, capacitive, or photoelectric object detection as necessary. These sensors are available in AC and DC versions, as well as in various cubic and tubular designs that make it easy to adapt to any type of location.

LSE-Titan

- Variable, adjustable switching point
- Precisely defined and reproducible
- Quick and bounce-free PNP-switching outputs facilitate high operating frequency
- Certified by the TÜV Rheinland

RS Titan

- Non-contacting: long lifespan, easy installation, high tolerance for doors and hinged flaps that do not close precisely, low maintenance
- High IP67, IP69 degree of protection: easy to clean, rugged, and reliable
- Symmetrical enclosure: easy mounting, low inventory levels
- 2 or 3 switching contacts: suitable for many applications
- Potential-free contacts: easy connection

System overview

5

Base devices

Basic device	1
According to EN 50047	
With screw-on cover	
Contact configuration: 1N/O/1NC, 2N/O, 2NC	
Cage Clamp, screw terminal	
As snap-action or standard-action switch	
As electronic snap-action switch, (individually adjustable)	
→ Page 167	

Operating heads

Can be rotated by 90°

Mounting adapter	2
Actuation through front element	
RMQ-Titan®	
Roller lever	3
For single conductor run actuation with higher operating speed	
Angled roller lever	4
For actuation along the unit axis	
Swing handle	5
For actuation from the side, for pendulum movements	
→ Page 178	

Operating heads

Can be rotated by 90°

Roller plunger	6
Adjustable roller lever	7
Rounded plunger, center fixing	8
For mounting in enclosure wall or mounting plate drilling M18 x 1	
Roller plunger, center fixing	9
For mounting in enclosure wall or mounting plate drilling M18 x 1	
Actuating rod	10
Spring-rod actuator	11
Not to be used as a safety position switch.	
Use only in conjunction with snap-action contact.	
Actuating rod	12
→ Page 178	

LS, LSM product features

- Modular system
- IP65 and IP66 protection type (except LSM)

- Personnel protection
- Positive operation
- Ⓢ Safety function with positively opening contacts to IEC/EN 60947-5-1 up to Category 4 to EN 954-1

- Suitable for use with electronic devices to IEC/EN 61131-2
- Devices for world markets

-	2 N/C		●	LSE-02 266122	2 units ¹⁾

Notes **LSE-11 and LSE-02: Individual operating point adjustment:**

The following applies for LSE-11 and LSE-02: ensure that the power supply operates correctly when setting the operating point.

Circuit example for series connection:

LSE-11 and LSE-02 can be used in safety-oriented circuits.

S1 is connected to 24 V DC
S2, S3 each switch with a delay of 0.7 s
R1, R2 e. g. series resistor element M22-XLED60 (2820 Ω/0.5 W)

LS...ZB

Closed

Open

→ Personnel protection

Door open

→ Enabling contact (21-22) opening positively

Door open

→ Enabling contact safely open; tamperproof against simple tools

Close door

→ Triple coded actuator closes the enabling contact

Switch must never be used as a mechanical stop!

LS-S02-...FT-ZBZ, spring-powered interlock (closed-circuit current principle)

- Enhanced personnel protection with separate signal for door position
- Door closed and interlocked → De-energized: even with mains failure or wire breakage: door interlocked = safe state
Enabling contact (21-22)
- To unlock door → Applies voltage to coil (A1, A2) e.g. via zero-speed monitor, enabling contact (21-22) opens
- Door open → Both contacts blocked in the open position, even with tampering with simple tools
- Close door → Triple-coded actuator cancels enabling contact inhibit; door position contact (11-12) closes
- Lock door → Disconnect coil voltage:
1st actuator interlocked
2nd enabling contact closed
→ Enable only when door locked

Switch must never be used as a mechanical stop!

LS-S02-...MT-ZBZ, magnet-powered interlock (operating current principle)

- Process protection + personnel protection with separate indication of the door position
- Door closed and interlocked → Energized: Enables immediate access in the event of mains failure and wire breakage. Both contacts closed
- To unlock door → Applies voltage to coil (A1, A2) e.g. via zero-speed monitor, enabling contact (21-22) opens
- Door open → Only possible once it is released, door position contact (11-12) opens
- Close door → Triple-coded actuator cancels enabling contact inhibit; door position contact (11-12) closes
- Lock door → Disconnect coil voltage:
1st actuator interlocked
2nd enabling contact closed
→ Enable only when door locked

Switch must never be used as a mechanical stop!

Notes

Electric circuitry with DIL contactors and ESR5 safety relay
→ Safety manual TB02000-009, Article no. 119906

With the actuator inserted, the N/O contact is open and the N/C contact is closed.

Switch must never be used as a mechanical stop!

¹⁾ Time control of the release operation possible using ESR5-NV30-30

The operating head can be rotated manually in 90° steps to suit the specified level of actuation.

In the event of a loss of voltage, (e.g. during commissioning), the spring-powered LS-...-FT-ZBZ can be released with a screwdriver.

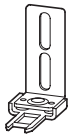

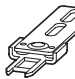

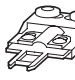

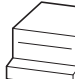

The auxiliary release mechanism must be sealed!
→ Instructional leaflet AWA 1310-2354

For degree of protection IP65, use V-M20 cable glands with connecting thread of max. 9 mm length

V-M20 cable gland → see Online catalog

Position switches/sensors

E55 Limit Switch Style series

Moeller series

Description

- ① LED for output status.
- ② Corrosion-resistant PBT Housing

- ① Sensor head fitted for lateral detection. Can be rotated 90°.
- ② Non-metal housing is corrosion-resistant.

5

Short Description

Cylinder design

Tubular Inductive Proximity Sensors by Eaton's electrical business are constructed of corrosion-resistant PBT insulated material. They are ideally suited for wash down applications such as those found in food processing plants. They are available in 12 mm, 18 mm and 30 mm diameters. Screened sensors can be embedded in metallic surfaces.

Product characteristics

Cylinder design

- Versions for 2-conductor AC voltage or 3-conductor DC voltage.
- Threaded tubular housings in three diameters allow easy integration into new and existing applications.
- Nonmetallic construction offers excellent resistance to corrosion
- All models feature an output signal indicator light.

Approvals

Short Description

Rectangular design

These sensors from Eaton's electrical business feature PBT resin housings for high resistance to corrosion. The housing is sized to offer a direct replacement for standard limit switches. The unique sensing head is factory assembled for top sensing, but can be easily converted in the field to any one of four side sensing positions. Models are available with sensing ranges from 15 mm to 40 mm. The sensors can be wired for N/O or N/C operation.

Product characteristics

Rectangular design

- Nonmetallic housing offers excellent resistance to corrosion.
- Same form factor and design as standard limit switch for easy retrofit.
- Sensor head features five sensing positions (top and all four sides) that can be easily changed in the field.
- Long sensing ranges up to 40 mm.

① LED for current and output status

Short Description

Eaton's E56 sensors are powerful inductive proximity sensors. The E56 Pancake series has a longer range than other types of inductive sensors. They are easy to wire and feature self-configuring complementary outputs, which automatically detect an NPN or PNP connection and configure the sensor accordingly without user interaction. Indicator lights for power and output state simplify troubleshooting compared to sensors with only an output indicator. These convenience features and their high performance make the E56 Pancake sensors ideal for applications in which a rugged design and a long range are required.

Product characteristics

- Large measuring with range up to 100 mm.
- Three sizes for all application scenarios; max. range 50, 70 or 100 mm.
- Complementary outputs (1 × N/C, 1 × N/O) on models with four-wire connection.
- Models with DC voltage four-wire connection feature an automatic configuration function for independent switchover between NPN and PNP.
- Robust design featuring vibration and impact-absorbing potting compound
- Ideal for extreme temperatures or high pressure washdown environments.

Description

- ① Outputs with function display on all models.
 ② All models with M12 plug connector or cable (2 m).
 ③ Versions for flush or non-flush installation available.

Short Description

Eaton's proximity sensors of the Global series have been developed specially for OEM series production. The sensors feature only the functions required for reliable operation. This means that you do not pay for additional, unnecessary functions but get the performance and features you expect from a sensor. Our DC versions feature a short-circuit protective device and a rating of up to 2000 measuring cycles per second. The outputs of all models are equipped with a function display. The Global series includes models with various diameters from 8 to 30 mm, making it truly versatile in installation. Versions with various ranges are also available. The proximity sensors Global are DC or AC units with 2- or 3-wire, NPN or PNP configuration. Versions for hard-wiring or with M12 plug connector are available. The DC versions have a rated load current of 100 mA, the AC versions of 200 mA.

Product characteristics

- The Global Proximity Line features solid performance and a basic feature set for reliable, cost-effective sensing.
- Available in a variety of sizes to fit in all of your applications: 8 mm, 12 mm, 18 mm und 30 mm diameters.
- The input voltage of the DC versions is 10 - 30 V DC in 2- and 3-wire configuration (PNP and NPN).
- The input voltage of the AC voltage variants is 2-AC 20 - 250 V.
- The operating frequency of the DC versions is 2 kHz.
- Versions for flush or non-flush installation available.
- Connection through cable (2 meters) or M12 plug connector
- The DC versions feature short-circuit protection.

Automation Highlights

Discover the highlights from our automation portfolio and see how we are tackling the challenges of today's machine control and visualization.

easyE4 control relays

Our easyE4 control relay provides a strong alternative to PLC systems and is the perfect way to efficiently design and quickly implement versatile solutions for a wide variety of control tasks in buildings and machine-building scenarios. In addition to various communication options with the integrated Ethernet port, easy communication modules can be used to connect to Modbus RTU and SmartWire-DT. Finally, easySoft programming software offers an ideal programming environment for any user.

Modular PLCs XC100, XC200 and XC300

XC programmable logic controllers are compact, powerful, and versatile PLCs that enable machine and equipment builders to implement streamlined state-of-the-art automation solutions in combination with modular XN300 I/O expansions and XV touch panels. Moreover, the PLCs and gateways can be easily and flexibly complemented with the I/O slice modules in our XN300 system. Ethernet ports with individual network adapters for connecting to various networks, paired with standard CAN and RS-485 interfaces, expand the functionality of these devices, turning them into universal control and communication points for networked systems.

You can find more information on the product pages at:
www.Eaton.com/automation

Touch panel XV300

Our XV300 touch panels with capacitive multi-touch technology can be used as HMIs, or optionally with integrated PLC functionalities. These devices not only feature extensive interfaces in order to provide maximum versatility, but also provide extraordinary system performance. Moreover, they can be used with multi-media elements such as videos and web contents. Using XV300 devices is as convenient as using a normal smartphone or tablet.

XP500 industrial PC

Our powerful XP500 industrial PCs are available as an HMI solution for a variety of machine-building and facility-engineering applications, as well as for building automation projects.

By combining powerful technology, intuitive multi-touch interfaces, and a stylish design, these devices provide maximum versatility. In fact, the corresponding portfolio can be used flexibly both in standard and modular systems, and the fully open PC design, high reliability, and use of the Windows 10 operating system ensure that it can be very easily integrated into existing systems.

Remote I/O system XN300

Eaton's ultra-compact, slice-card-based XN300 modular I/O system features plug-in connection system and can be combined with HMI PLC products in order to create the ideal system solution for your applications. The XN300 I/O system can be flexibly used as local I/O directly with XC300 PLCs or as distributed I/O on CAN or EtherCAT networks. In addition, a modern design with a convenient installation concept not only makes handling easier, but also makes it possible to pre-assemble an I/O station. Moreover, the plug-in terminal system makes commissioning easier and rounds off the system's characteristics, making it the perfect solution for the needs of machine building applications meant for mass production.

Value-added services (VAS) – The key to a more profitable business

Our Value Added Services Team will be happy to assist you with the following:

- Simplifying procurement and ordering processes
- Improving product installation and configuration processes
- Optimizing your design processes
- Reducing total costs
- Integrated one-stop solutions from Eaton

How can we provide you with added value?

Contact us VAS-EMEA@eaton.com

Kitting

In order to streamline production processes, avoid unnecessary steps, and reduce packaging, VAS offers our kitting service. All items needed can be ordered with a single part number and be delivered packed in a single box.

Assembly Solutions

In order to save necessary time when installing combinations, VAS offers plug and play solutions. Our Value-Added Services Team can pre-assemble products and install them on DIN rails, mounting plates, and even third-party systems. In addition, we can pre-wire items with conventional cables or innovatively with SmartWire-DT.

Warehouse Services

In order to improve efficiency and avoid wasting valuable time, all items can be delivered grouped with cardboard partitions. In addition, Eaton VAS can also affix customized labels and barcodes and deliver everything in a single selected package. Including Kanban containers.

Software Upload

With our VAS Team, you can significantly cut down on the time it takes to set up systems such as PLCs. The relevant product will be delivered directly with its own pre-installed software and the corresponding operator manual. Having the software and drivers installed ensures that your product will be ready to use faster.

To find the right contact person:

At Eaton, we believe that building and maintaining strong relationships with our customers is something that deserves our undivided attention. This is why you can rest assured knowing that you will be able to count on us for every project from the very start. To find out whom to contact for your needs, please visit our website:

To find the right contact person, visit:
→ <https://www.eaton.com/gb/en-gb/support/customer-support/electrical-support.html>

Eatons After Sales Service

Eaton is known for its unparalleled after-sales support for all low-voltage switchgear, switchgear systems, and services. For more detailed information, as well as to view our terms and conditions, please visit www.eaton.eu/aftersales

Service Specialists

Gain the benefit of our Service personnel. Comprehensive expertise linked with long term experience and modern equipment help you find the solution to your tasks.

Material

Components, cards and spare parts of the Eaton product range are available for your use.

Service products

The After Sales Service offers appropriate service products for the Eaton products.

Onsite Service

Troubleshooting, inspections, tests, maintenance, commissioning

Repairs

Replacement devices and spare parts for current and discontinued products; direct/warranty replacement for select products; repairs

Online Services

Downloads, FAQs and interactive troubleshooting.

Eaton is an intelligent power management company dedicated to improving the quality of life and protecting the environment for people everywhere. We are guided by our commitment to do business right, to operate sustainably and to help our customers manage power – today and well into the future. By capitalizing on the global growth trends of electrification and digitalization, we're accelerating the planet's transition to renewable energy, helping to solve the world's most urgent power management challenges, and doing what's best for our stakeholders and all of society.

Founded in 1911, Eaton has been listed on the NYSE for nearly a century. We reported revenues of \$19.6 billion in 2021 and serve customers in more than 170 countries. For more information, visit www.eaton.com. Follow us on Twitter and LinkedIn.

Subject to changes to products, information contained in this document and prices as well as errors and omissions. Only the order confirmation and the technical documentation of Eaton are binding. Photos and illustrations also do not guarantee a specific design or functionality. Their further use in any form must be approved by Eaton in advance. The same applies to brands (especially Eaton, Moeller, Cutler-Hammer, Cooper, Bussmann). The terms of sale of Eaton apply, as referenced on Eaton internet pages and Eaton order confirmations.
