Distance-settable Photoelectric Sensors
E3AS Series

OMRON

Advanced reflective photoelectric sensors for quick and easy equipment design and commissioning

IO-Link ECOLAB

E3AS Series changes the “way of using” reflective photoelectric sensors

In order to satisfy various consumers' needs, products have become more diversified, and got shorter life cycles. As a result of advanced equipment and shortage of skilled workers, quick equipment design and stable operation are critical issues at manufacturing sites. OMRON’s E3AS Series offers new ways of using reflective photoelectric sensors to reduce equipment commissioning time.

TOF Laser Sensor
E3AS-F

CMOS Laser Sensor
E3AS-HL

Distance-settable
Photoelectric Sensor
E3AS-L

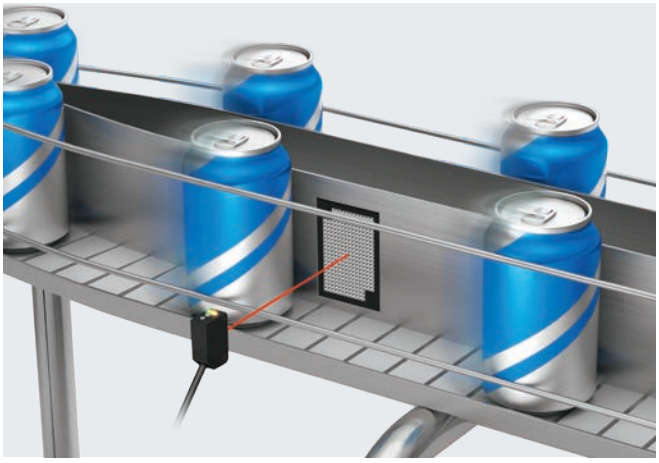
Easy to select

Design

Just select from three models to suit the workpiece and sensing distance P.4

Stable detection for variable workpiece eliminates the need for redesign P.6

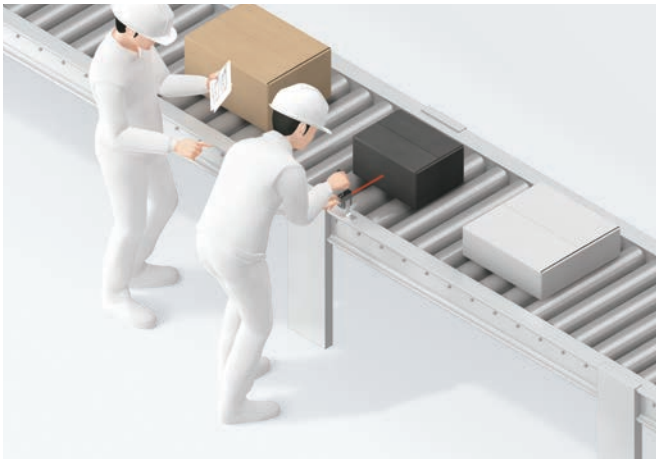
Flexible to design with no need for reflectors



Design

Compact body overcomes space limitations, increasing design flexibility P.8

Easy to commission and maintain with no reliance on people's skills



Commissioning

Teaching enables easy, quick, and optimal setting P.10

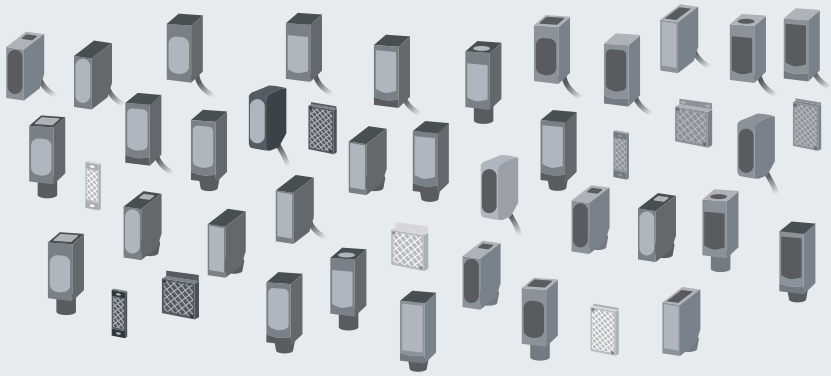
Maintenance

Enhanced environmental resistance reduces line downtime and maintenance frequency P.12

Just select from three models to suit the workpiece and sensing distance

Selecting sensors for the many different kinds of workpieces is a time-consuming exercise. The E3AS Series makes it simple-just select the sensor according to the workpiece and sensing distance. No more poring through long lists of models.

Until now select a sensor from long lists of candidates



Just select from three models

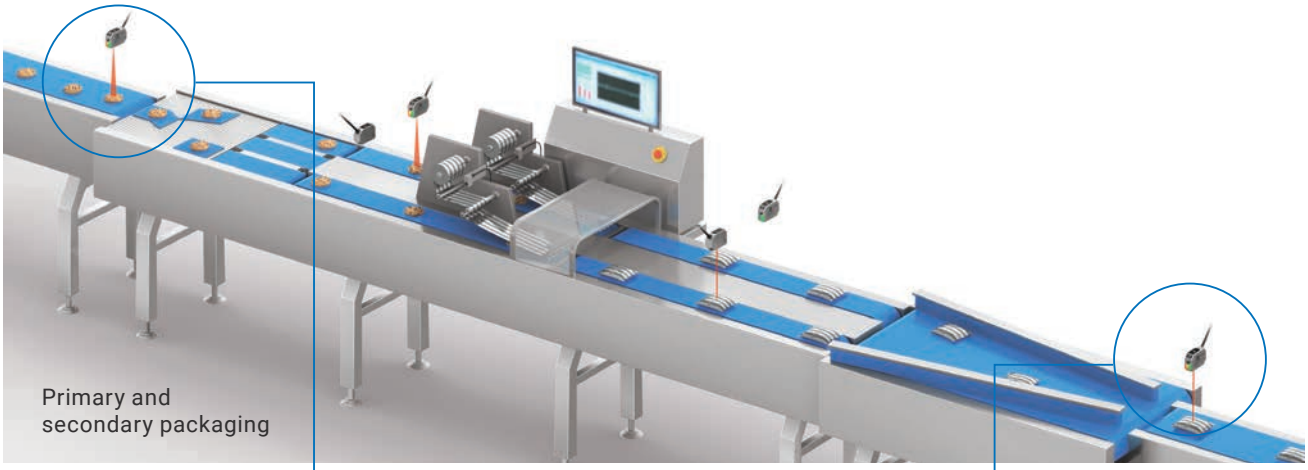
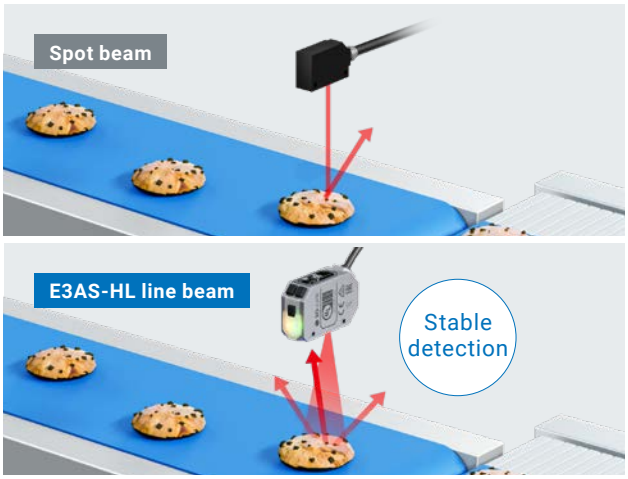
Stable detection for variable workpieces eliminates the need for redesign

Conventional sensors have to be selected each time the shape, color, pattern, or reflectivity of the workpiece changes, so the equipment sometimes need to be redesigned. The E3AS Series can detect workpieces without being significantly affected by variable shapes, colors, and materials, saving redesign time.

E3AS-HL for complex-shaped, colored, patterned, or glossy workpieces

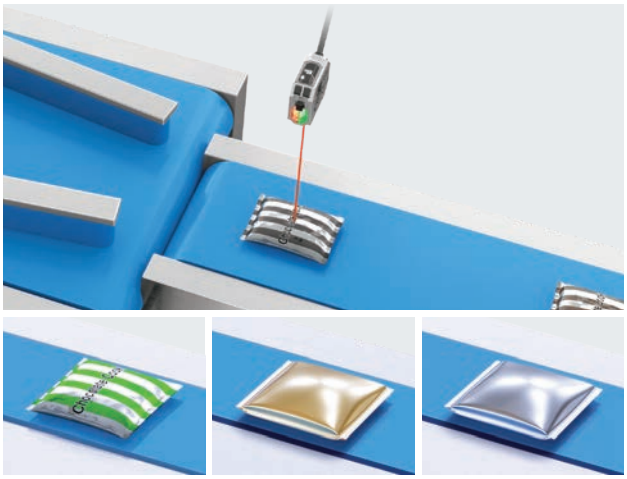


Stable detection for uneven surfaces



With spot beam, detection is unstable since the reflected light does not reach the sensor depending on the profile of the workpiece surface. With the line beam of the E3AS-HL Sensor, detection is less affected by the profile of the surface since the reflected light reaches the sensor from any part of the surface.

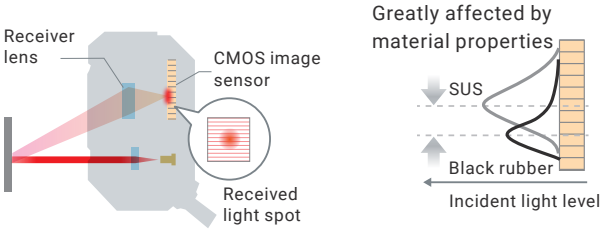
Stable detection for various colored, patterned, or glossy workpieces



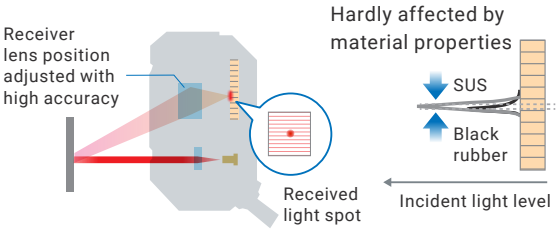
Detection is prone to be unstable because color, pattern, or reflectivity affects the sensing distance. The E3AS-HL Sensor is less likely to be affected by them, providing stable detection even when packaging materials change.

CMOS sensing with built-in lens alignment technology minimizes the influence of material properties PATENT PENDING *1

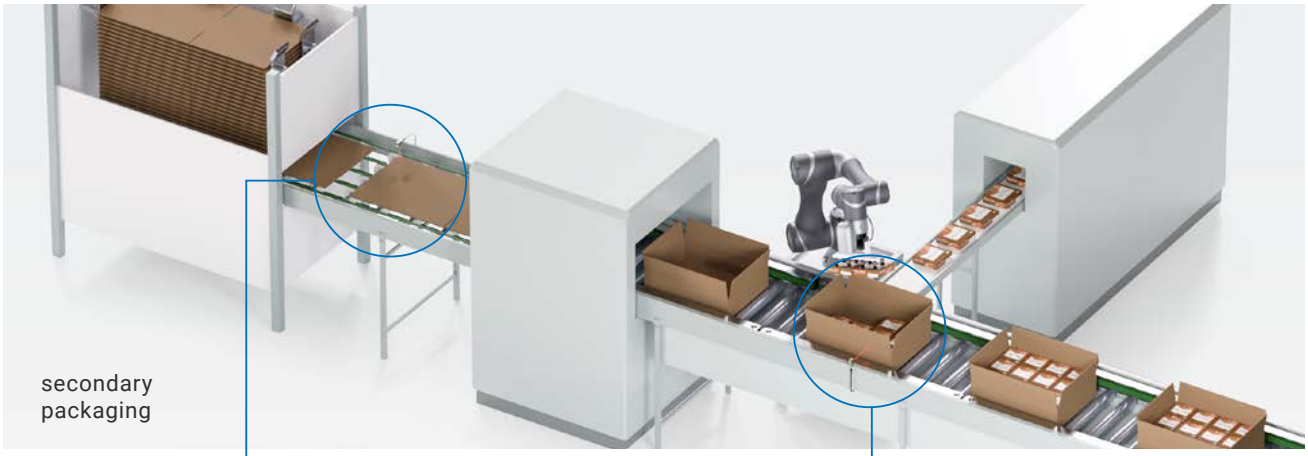
From Material properties greatly affect the detection due to blurred received light spot on CMOS as a result of low position adjustment accuracy of the receiver lens.



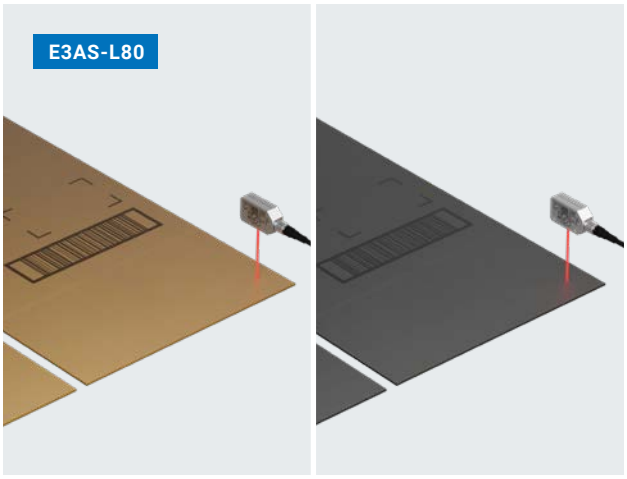
To Material properties hardly affect the detection since the receiver lens position is automatically adjusted to the micrometer level to minimize the received light spot.



E3AS-L for simple-shaped, low-reflective workpieces

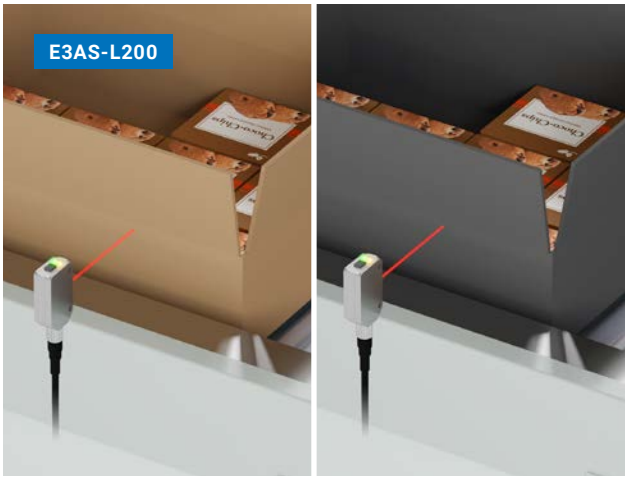


Stable level difference detection for various colored workpieces



Detection may become unstable as differential travel varies depending on the workpiece color. The E3AS-L80 Sensor can reliably detect level difference regardless of color since its differential travel for black paper is 5%.

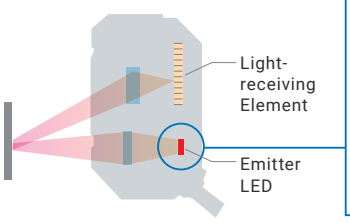
Stable detection for various colored boxes



When the workpiece is low-reflective black paper, detection may become unstable due to insufficient sensing distance. The E3AS-L200 Sensor can stably detect at the same distance regardless of color since its sensing distance for both white paper and black paper is 200 mm.

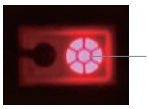
OMRON's unique LED package stably detects low-reflective workpieces

The E3AS-L Sensor is equipped with an emitter 6 times more powerful than those of conventional models [*2], and delivers stable detection due to its ability of receiving light reflected by low-reflective workpieces.



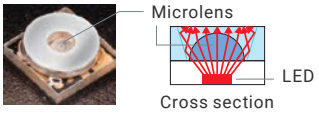
E3AS-L80

High-efficiency custom point light source LED with improved light extraction efficiency



E3AS-L200

High-efficiency combined LED package with microlens hat increases light density

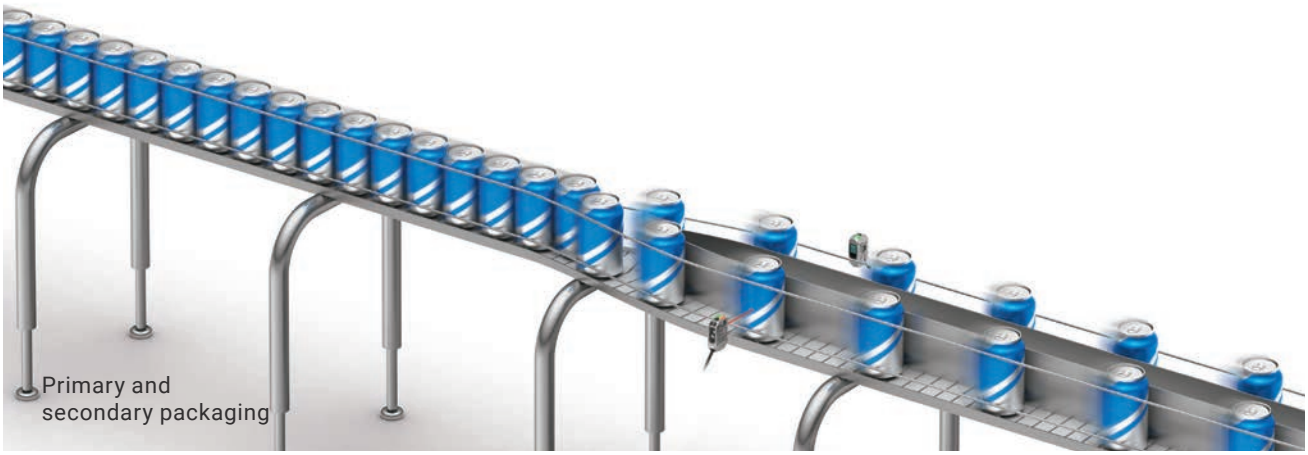


*1. "Patent pending" means that we applied for a patent in Japan. (As of September 2020) *2. Comparison with E3Z-LS products.

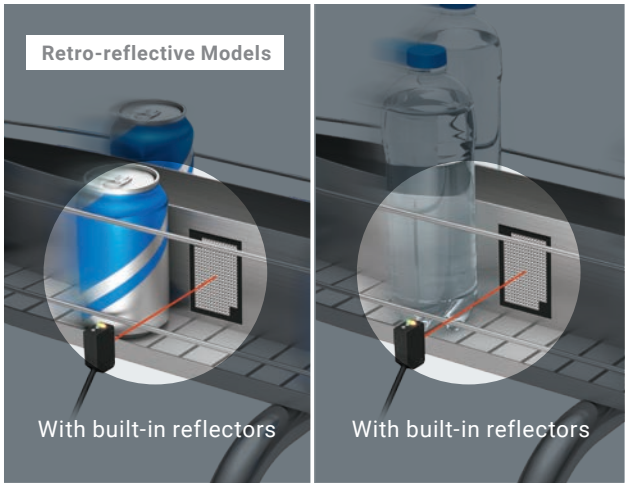
Overcomes space limitations, increasing design flexibility

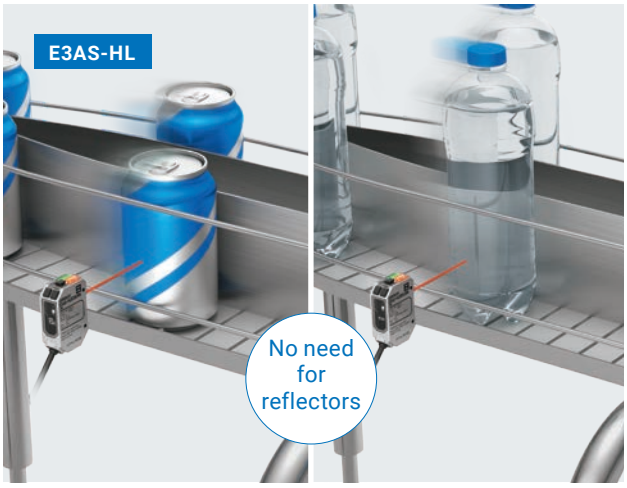
Retro-reflective sensors are used to detect difficult workpieces or where long sensing distance is needed. Designing with retro-reflective sensors is time consuming due to installation space constraints as the equipment gets sophisticated and complex. On the other hand, the E3AS Series allows for designing without reflectors.

E3AS-HL for multi-lane conveyor lines of workpieces with curved surface



Stably detects cans and plastic bottles without reflectors





Retro-reflective sensors are used to detect poorly reflective curved surfaces of cans and transparent plastic bottles, but securing installation space for reflectors on multi-lane conveyor lines is difficult.

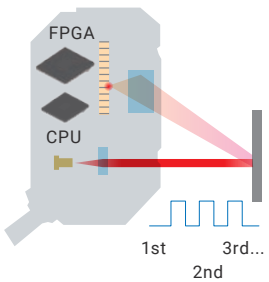
The E3AS-HL Sensor, a reflective model capable of detecting the slightest change in the incident light level or distance, can stably detect cans and plastic bottles without reflectors.

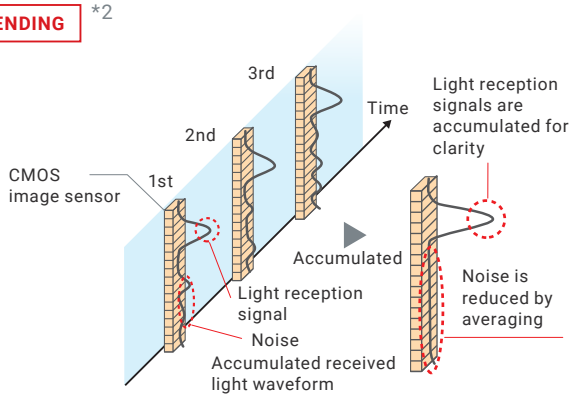
Sensing algorithm detects minimal reflected light from curved surface

Industry First *1 PATENT PENDING *2

E3AS-HL Sensors equipped with FPGA use the industry-first sensing algorithm to perform high-speed sampling of received light waveforms at 10,000 times per second and OMRON's unique accumulation processing, significantly increasing its sensitivity. They amplify the slightest amount of light to stably detect workpieces with glossy or uneven surfaces, complex shaped workpieces, or other workpieces from which it is difficult to receive reflected light.

Note: Not applicable to transparent objects.





E3AS-F for long-distance sensing on converging and diverging lines

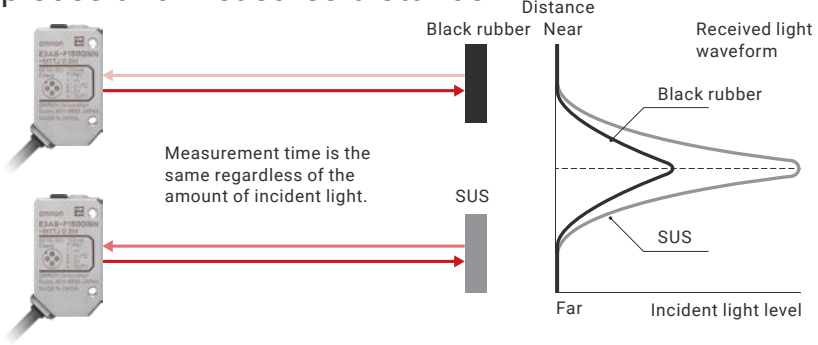
No reflector is required to design long-distance sensing unaffected by color or material of workpieces

Although retro-reflective sensors are used for long-distance sensing in converging and diverging lines, it is difficult to find installation space for reflectors.

The E3AS-F Sensor, a reflective model with long sensing distance, does not require reflectors. Moreover, it is less likely to be affected by color even from long distances.

TOF detects varying workpieces and measures distance

In the TOF (Time of Flight) method, the distance is measured based on the elapsed time instead of the amount of incident light received. Measurements therefore are not affected by changes in the color or material of the workpiece. This means that low-reflective workpieces, such as black rubber, can be detected from longer distances.



*1. Based on OMRON investigation in September 2019. *2. "Patent pending" means that we applied for a patent in Japan. (As of September 2020)

Teaching enables easy, quick, and optimal setting

E3AS Sensors allow virtually anyone to easily set optimal settings using the teaching method, eliminating rework due to problems during commissioning. Moreover, easy-to-standardize operability makes remote work instructions simple.

Single teach button prevents inconsistent settings

Easily and consistently set the optimal threshold level using the teach button

Background teaching

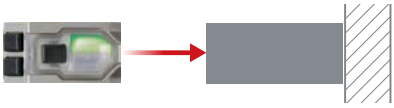
Set the threshold level at a point before the background (reference surface).

Hold teach button

Two-point teaching

Set the threshold level at a value halfway between that when a workpiece is present and when one is not.

Place a workpiece in position and press the teach button



Press the teach button without the workpiece in place

Key locking

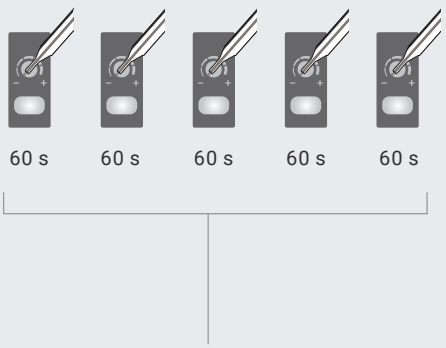
The key locking function prevents malfunction after setting.

Fast and easy setup also when setting a large number of sensors

Sensitivity adjustment using the conventional adjuster method requires experience, finesse as well as time since the threshold level must be adjusted one unit at a time.
With the E3AS Series, just press the teach button to automatically set the threshold level, enabling fast and easy setting.

Adjuster method

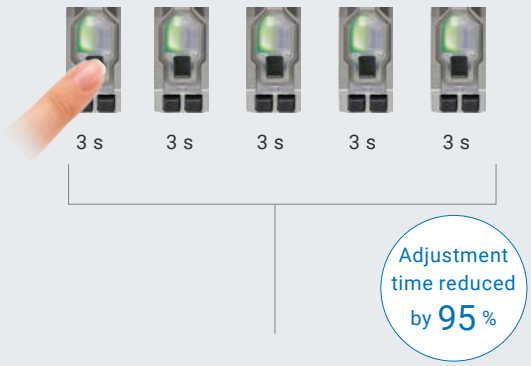
The adjuster must be turned to the left and right with a screwdriver for each and every unit because sensitivity differs depending on the installation location.



60 s x 5 units = 300 s in total

Teaching method (E3AS)

Setup can be completed by simply pressing the teach button on each sensor unit for 3 seconds.



3 s x 5 units = 15 s in total

Background Reference Teaching (sensitive) for easy setup of transparent object detection PATENT PENDING *1

CMOS E3AS-HL

Previously, the setup of sensors for transparent objects required the experience and finesse of skilled workers, but it can now be done with just the press of a button. The E3AS-HL Sensor detects presence of workpieces from the variation (correlation) of background distance information and incident light level information.

1. Correlation is 100% without a workpiece in place.

Without workpiece
(Correlation is 100%)

2. A transparent object (e.g., glass or plastic bottle) passing through is detected as the correlation with the background changes.

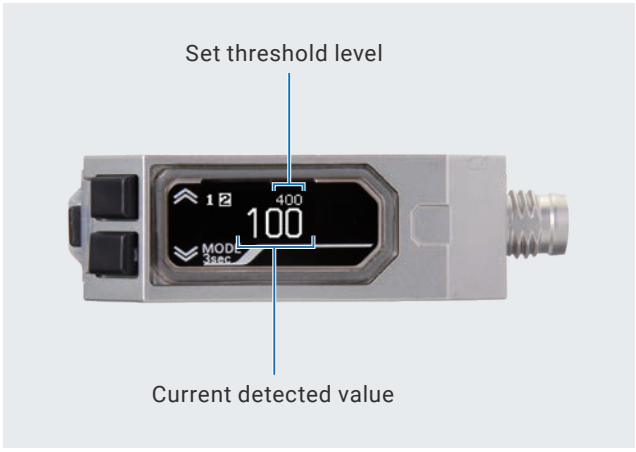
With workpiece
(Example: Correlation is 40%)

Easy-to-read, easy-to-understand OLED display

CMOS E3AS-HL

Threshold level and detected value display on the same screen makes threshold level setting easy. Moreover, wide viewing angle and display inverting allow on-site workers to easily see the display.

Detected value and threshold level at a glance



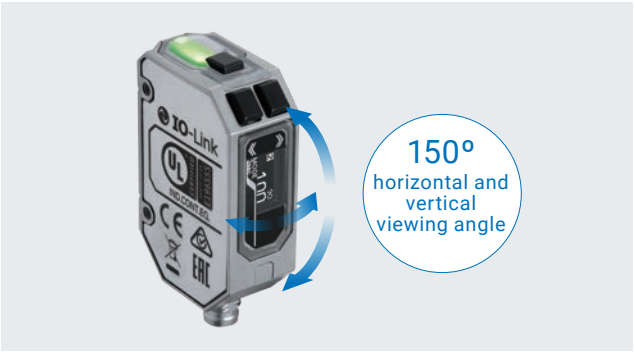
Detection display switching based on purpose

Bar display to grasp detection margin at a glance

ON/OFF display to easily check control output status

Easy-to-read setup menu display

Wide viewing angle allows reading from an angle



Invert display depending on sensor installation orientation

Inverting: Disabled

Inverting: Enabled

Enhanced environmental resistance reduces line downtime and maintenance frequency

When a sensor malfunction due to the environment causes a line stoppage during mass production, it can take a long time to restart. With enhanced environmental resistance, the E3AS Series will be realized minimize line downtime and maximize uptime.

Antifouling coating on sensing surface reduces false detection and cleaning frequency

Industry First *1 PATENT PENDING *2

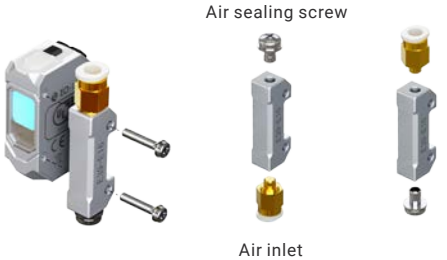
A dirty sensing surface can cause false detection due to the principle of photoelectric sensors. The E3AS Series has an industry-first antifouling coating on the sensing surface which prevents water droplets and paper dust from sticking to the sensing surface and keeps the lens from fogging as well. This reduces false detections.

Water | Paper dust | Water vapor

Air blow unit enhances the effectiveness of antifouling coating

PATENT PENDING *2

Using an air blow unit greatly reduces the frequency of false detections since it prevents the sensing surface of sensors installed in confined, difficult to clean locations from becoming contaminated. It can be mounted to any photoelectric sensor with a 25.4 mm mounting hole pitch as well as the E3AS Sensors.



Can be mounted on either side of the sensor

Air inlet position can be inverted

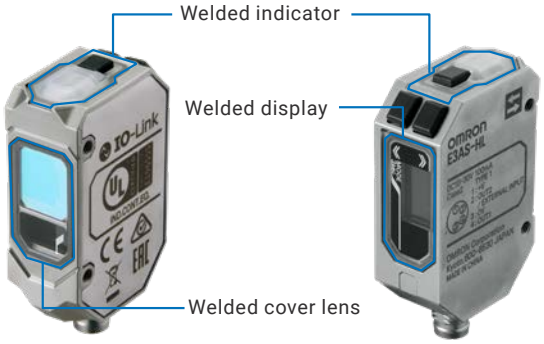
Unique case design reduces the frequency of replacements caused by failure

The sensor case is made of stainless steel (SUS316L). OMRON's unique laser welding technology for different materials enhances the sealing and adhesion between the stainless steel and resin.

IP69K
High temperatures/ high water pressure

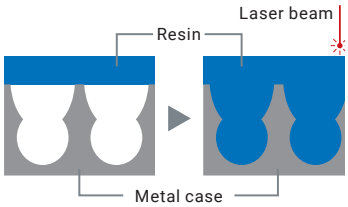
IP67G
Oil resistance

ECOLAB
Detergent resistance



Laser welding technology for different materials PATENTED *2

It is a technology to weld different materials, resin and metal, using laser beams. Tiny holes are bored into the metal case, then the resin part is melted in by a laser for secure sealing and adhesion.



False detections due to environmental changes can be prevented

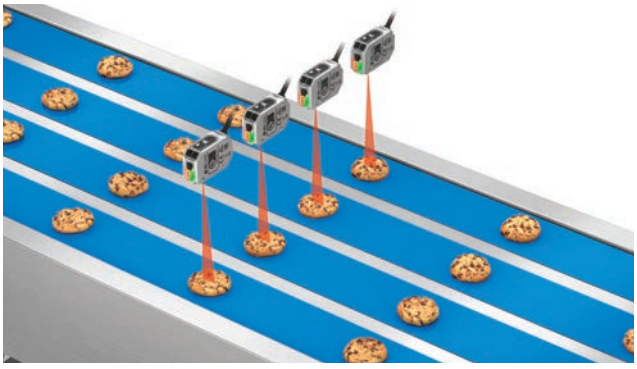
CMOS E3AS-HL

False detection may occur due to the effects of lights for vision sensors or nearby sensors after the production line layout is changed.
E3AS-HL Sensors can be operated in high ambient illumination conditions and have the mutual interference prevention function, reducing the frequency of false detections.

Operation under high ambient illumination

E3AS-HL Sensors can be operated under ambient illumination of 20,000 lx, which reaches the best in class level*3, preventing malfunctions caused by camera lights or sunlight.

Mutual interference prevention

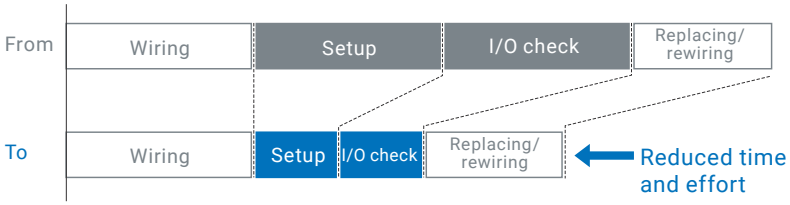


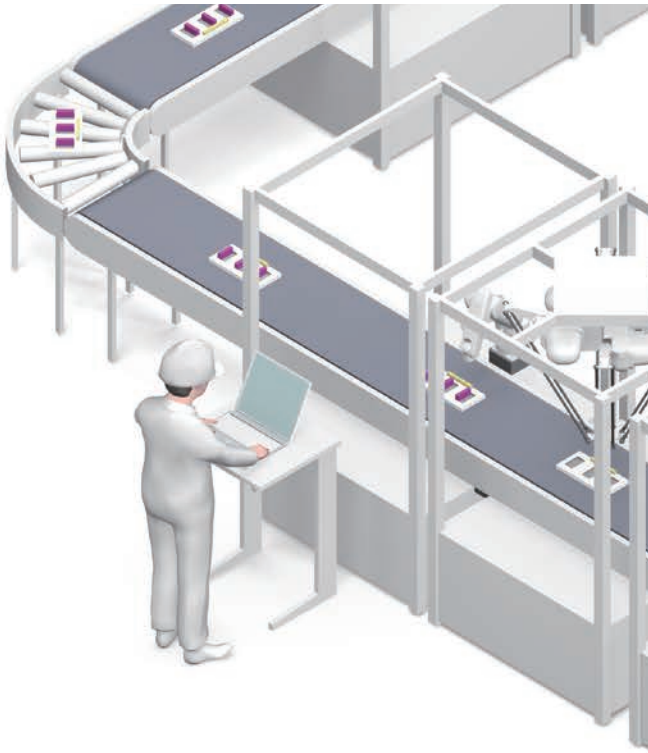
The mutual interference prevention function covers up to 4 units, allowing for false detections occurring upon sensor addition to be quickly resolved.

*1. Based on OMRON investigation in September 2019.
*2. "Patent pending" means that we applied for a patent in Japan, and "Patented" means that we obtained a patent in Japan. (As of September 2020)
*3. Based on OMRON investigation in September 2020.

Line commissioning and maintenance with less people in less time with IO-Link

With IO-Link, reduce commissioning time by batch-setting the sensors and cut troubleshooting time during mass production by utilizing field data.



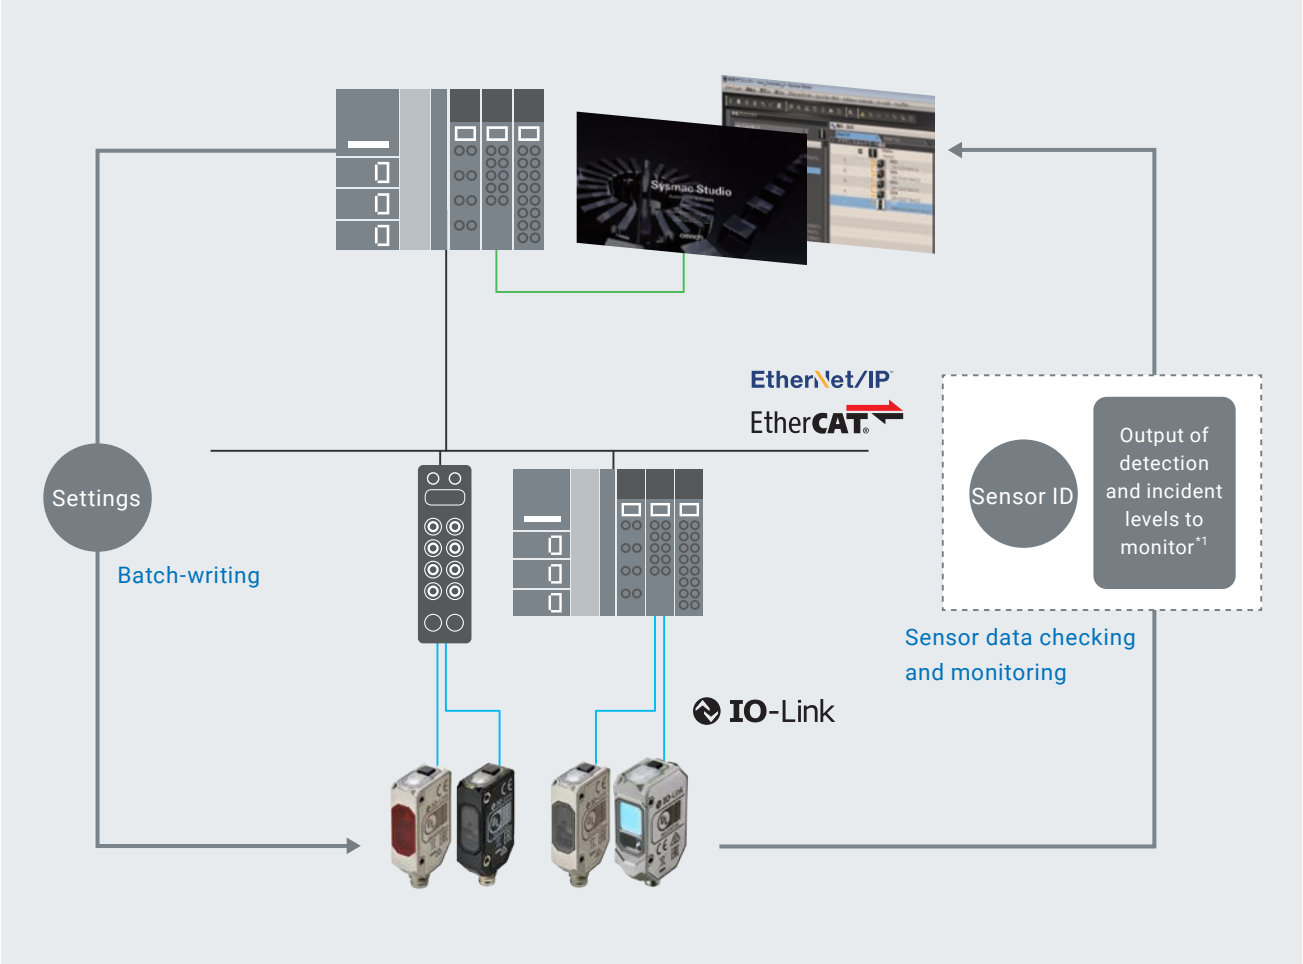


Reduce commissioning time by batch-writing settings from IO-Link device configuration tool

Setting information can be batch-written to thousands of sensors on a line, effectively reducing commissioning time and inconsistent settings.

Predictive monitoring and quick recovery by checking and monitoring sensor data

The monitor shows light intensity decrease due to sensing surface contamination or other reason, allowing users to take proactive actions to prevent potential false detections. This reduces the frequency of unexpected failures.



Model lineup

Mutual interference prevention function	Up to 4 units	—	—
Degree of protection	IP67/69K/67G/Ecolab		

Accessories enhance sensor usability

The E3AS Series comes with a lineup of accessories that shorten sensor adjustment time upon commissioning and reduce the frequency of false detections during production.
They can be used with non-E3AS sensors with a standard mounting hole pitch of 25.4 mm as well.

Flexible Mounting Bracket

Optical axis can be adjusted in three directions: vertical, horizontal, and angular.

Air Blow Unit

Blows paper dust and cleaning solutions off the sensing surface.

Front Protection Cover *3

Protects sensing surfaces from collisions with workpieces, containers, and pallets.

*1. E3AS-HL and E3AS-F only *2. "Patent pending" means that we applied for a patent in Japan. (As of September 2020)
*3. E3AS-HL only. Note: For details on ratings and specifications, refer to the *Ratings and Specifications* in this catalog.

MEMO

Distance-settable Photoelectric Sensors
E3AS Series

E3AS Series changes the “way of using” reflective photoelectric sensors

- Complete lineup of photoelectric sensors for various applications
- Teaching method allows anyone to set optimal threshold values
- Antifouling coating prevents contamination on the sensing surface
- Ecolab certified in addition to IP67/69K/67G protection
- All models with IO-Link connectivity (NPN type excluded)

For the most recent information on models that have been certified for safety standards, refer to your OMRON website.

⚠ Refer to *Safety Precautions* on page 38.

	External input		Laser OFF / Teaching / Zero reset selectable NPN ON time: 0 V short-circuit or 1.5 V or less, OFF time: Power supply voltage short-circuit or open PNP ON time: Power supply voltage short-circuit or within power supply voltage - 1.5 V, OFF time: 0 V short-circuit or open			
Response time			1.5 ms / 10 ms / 50 ms selectable			
Threshold setting method			Teaching method / Manual Operations / IO-Link communications			
Mutual interference prevention			4 units max. (when using the mutual interference prevention function)			
Ambient illumination			Receiver surface illuminance: Incandescent lamp: 20,000 lx max., Sunlight: 25,000 lx max. at distance of 250 mm Incandescent lamp: 5,000 lx max., Sunlight: 10,000 lx max. at distance of 500 mm		Receiver surface illuminance: Incandescent lamp: 8,000 lx max., Sunlight: 16,000 lx max.	

*1. Measured with OMRON's standard workpiece (White ceramic).
*2. Defined by D4σ method at the maximum sensing distance. Detection may be influenced if there is light leakage outside the defined region and the surroundings of the target object have a high reflectance in comparison to the target object. Also, when detecting a workpiece that is smaller than the spot size, a correct value may not be obtained.

Materials	Case	Stainless steel (SUS316L)	Metal case type: Main unit/mounting part/connector part Stainless steel (SUS316L) Plastic case type: Main unit Polybutylene terephthalate (PBT) / polycarbonate (PC), Mounting part/connector part Nickel-plated brass	Stainless steel (SUS316L)
	Lens cover and Display	Methacrylic resin (PMMA) (Lens cover: Antifouling coating)		
	Indicator	Polyamide 11 (PA11)	Metal case type: Polyamide 11 (PA11) Plastic case type: Polyethersulfone (PES)	Polyamide 11 (PA11)
Main IO-Link functions		Operation mode switching between NO and NC, execution of teaching (2-point teaching, Background teaching), setup of the threshold, timer function of the control output and timer time selecting, Restore Factory Settings, Key Lock (Unlock, Lock, Lock (No Button)), monitor output* (Detection level, Incident light level) * Only for E3AS-HL and E3AS-F		
IO-Link Communication specifications	IO-Link specification	Ver. 1.1		
	Baud rate	COM3 (230.4 kbps)		
	Data length	PD size: 4 bytes, OD size: 1 byte (M-sequence type: TYPE_2_V)		PD size: 1 byte, OD size: 1 byte (M-sequence type: TYPE_2_1)
	Minimum cycle time	COM3: 1.2 ms		
Accessories		Instruction manual, compliance sheet, index list (attached for IO-Link type only) E3AS-HL: FDA certification label and Warning label E3AS-F: FDA certification label Note: Mounting Brackets must be ordered separately.		

*1. The IP67G is the degree of protection which is defined according to the JIS (Japanese Industrial Standards).
The IP67 indicates the same level of protection as defined by the IEC, and the G indicates that a device has resistance to oil.

Safety Precautions

Be sure to read the precautions for all models in the website at: http://www.ia.omron.com/.

Warning Indications

⚠ WARNING	**Warning level** Indicates a potentially hazardous situation which, if not avoided, will result in minor or moderate injury, or may result in serious injury or death. Additionally there may be significant property damage.
⚠ CAUTION	**Caution level** Indicates a potentially hazardous situation which, if not avoided, may result in minor or moderate injury or in property damage.
Precautions for Safe Use	Supplementary comments on what to do or avoid doing, to use the product safely.
Precautions for Correct Use	Supplementary comments on what to do or avoid doing, to prevent failure to operate, malfunction or undesirable effect on product performance.

Meaning of Product Safety Symbols

	**General prohibition** Indicates the instructions of unspecified prohibited action
	**Caution, fire** Indicates the possibility of fires under specific conditions.
	**General caution** Indicates unspecified general alert.
	**Caution, explosion** Indicates the possibility of explosion under specific conditions
	**Laser Caution** Indicates information related to laser safety
	**Disassembly prohibited** Prohibit the disassembly of a device because of the possibility of injuries due to electric shock.

⚠ WARNING

This product is not designed or rated for ensuring safety of persons either directly or indirectly. Do not use it for such purposes.

Do not use it exceeding the rated voltage. There is a possibility of failure and fire.

⚠ CAUTION

Its component may be damaged and/or degree of protection may be degraded. Please do not apply high pressure water intensively at one place during cleaning.

Never use the product with an AC power supply. Otherwise, explosion may result.

E3AS-HL and E3AS-F models

To safely use laser products

⚠ WARNING

Do not expose your eyes to the laser beam either directly or indirectly (i.e., after reflection from a mirror or shiny surface). The laser beam has a high power density and exposure may result in loss of sight.

Do not disassemble this product. Doing so may cause exposure to the built-in light source which can damage eyes and skin. Never disassemble it.

Laser safety measures for laser equipment are stipulated by the country of use. Follow the instructions described below categorized in four cases.

1. Usage in Japan

The JIS C6802:2014 standard stipulates the safety precautions that users must take according to the class of the laser product. This product is classified into class 1 defined by this standard.

2. Usage in U.S.

This product is subjected to the U.S. FDA (Food and Drug Administration) laser regulations. This product is classified into Class 1 by the IEC 60825-1:2014 standard according to the regulations of Laser Notice No.56 of the FDA standard. This product is already reported to CDRH (Center for Devices and Radiological Health).

Accession Number: 1920014-001

When using a device equipped with the product in the U.S., attach an FDA certification label near the sensor mounted on customer equipment.

FDA certification label

3. Usage in China

This product is classified into Class 2 by the GB7247.1:2012 (IEC60825-1:2007) standard.

When using a device equipped with the product in China, attach a Warning label near the sensor mounted on customer equipment.

Warning label

4. Usage in countries other than U.S. and China

This product is classified into Class 1 by the IEC/EN 60825-1:2014 standard.

Precautions for Safe Use

The following precautions must be observed to ensure safe operation.

1. Do not reverse the power supply connection or connect to an AC current.
2. Do not short the load.
3. Be sure that before making supply the supply voltage is less than the maximum rated supply voltage (30 VDC).
4. Do not use the product in environments subject to flammable or explosive gases.
5. Do not use the product under a chemical or an oil environment without prior evaluation.
6. Do not attempt to modify the product.
7. Do not touch the metal surface with your bare hands when the temperature is low. Touching the surface may result in a cold burn.
8. Burn injury may occur. The product surface temperature rises depending on application conditions, such as the ambient temperature and the power supply voltage. Attention must be paid during operation or cleaning.

Precautions for Correct Use

1. Do not hit the product using a hammer for installation.
2. The product must be installed with the specified torque or less. For M8 connector, the proper tightening torque is from 0.3 to 0.4 N·m. In case of M12 smartclick connector, manually tighten the connector.
3. Tightening torque for the mounting hole is 0.6 N·m or less (M3 screw).
4. Do not use the product in any atmosphere or environment that exceeds the ratings.
5. Output pulses may occur when the power supply is turned OFF. We recommend that you turn OFF the power supply to the load or load line first.
6. Use an extension cable less than 100 m long for Standard I/O mode and less than 20 m for IO-Link Communication mode.
7. Do not pull on the cable with excessive strength.
8. Be sure to turn off the power supply when connecting or disconnecting the cable.
9. Please wait for at least 600 ms (E3AS-HL), 500 ms (E3AS-F), 100 ms (E3AS-L) after turning on the product's power until it is available for use.
10. Though this is type IP67, do not use in the water, rain or outdoors.
11. If the Sensor wiring is placed in the same conduits or ducts as high-voltage or high-power lines, inductive noise may cause malfunction or damage. Wire the cables separately or use a shielded cable.
12. Do not use the product in locations subject to direct sunlight.
13. Do not use the product where humidity is high and dew condensation may occur.
14. Do not use the product where corrosive gases may exist.
15. If high-pressure washing water and so on hits the button, it might lead to malfunctioning. So, consider use of the key lock function.
16. Do not apply high-pressure washing water directly to the sensor's light emitting / receiving surface from a short distance. As the antifouling feature may be impaired, keep a sufficient distance from the light emitting / receiving surface.
17. Do not use the product at a location subject to shock or vibration.
18. To use a commercially available switching regulator, FG (frame ground) must be grounded.
19. Do not use organic solvents (e.g. paint thinner and alcohol) for cleaning. Otherwise optical properties and protective structure may deteriorate.
20. Be sure to check the influence caused by surrounding environments such as background objects and LED lighting before using the product.
21. Do not exceed 100,000 writing operations of the EEPROM (non-volatile memory). Setting information is written to the EEPROM when a threshold value change, teaching, or zero reset is executed.
22.  Please dispose in accordance with applicable regulations.

Material: Stainless steel (SUS304)
✻ Accessories
2-M3-L10 Cross Recessed Pan Head Screws (Attached to SW+JIS W)

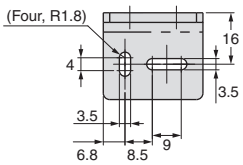
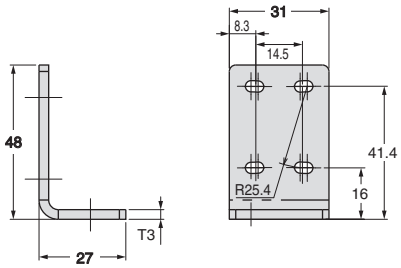
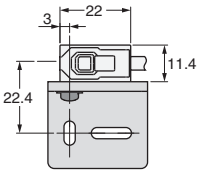
For E3AS-F/L models

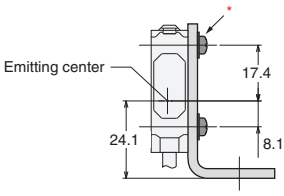
E39-L201

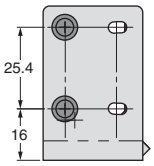




Photoelectric Sensor Accessory are installed (Example of E3AS-L200☐)

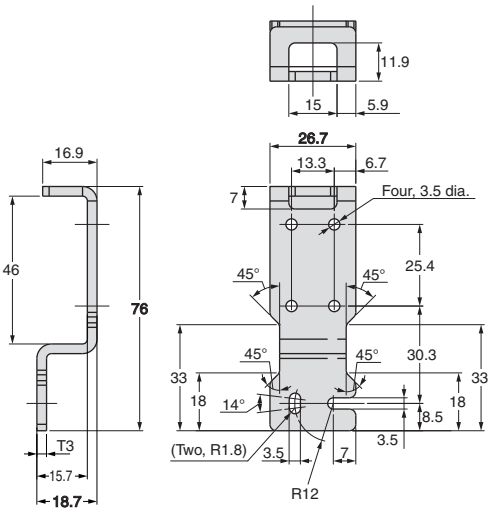




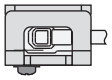


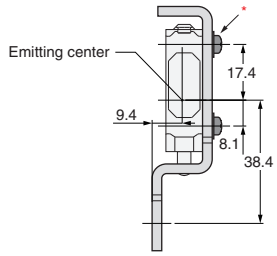
Material: Stainless steel (SUS304)
✻ Accessories
2-M3-L12 Cross Recessed Pan Head Screws (Attached to SW+JIS W)

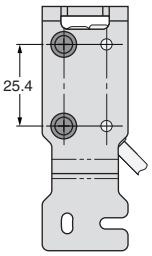
E39-L202



Photoelectric Sensor Accessory are installed (Example of E3AS-L200☐)

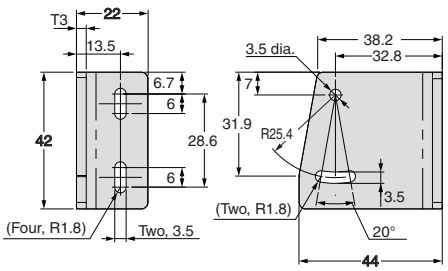




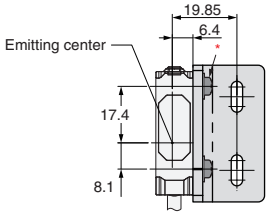


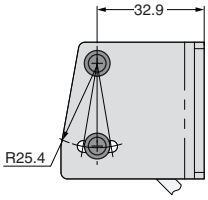
Material: Stainless steel (SUS304)
✻ Accessories
2-M3-L12 Cross Recessed Pan Head Screws (Attached to SW+JIS W)

E39-L203



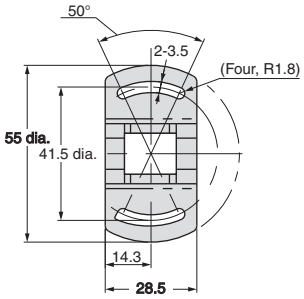
Photoelectric Sensor Accessory are installed (Example of E3AS-L200☐)



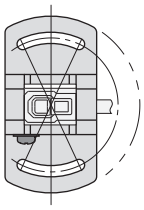


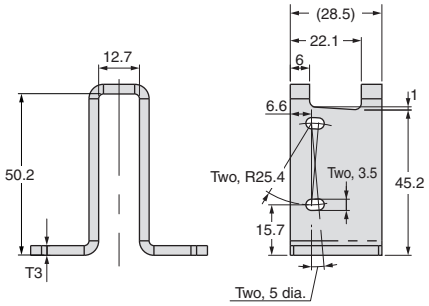
Material: Stainless steel (SUS304)
✻ Accessories
2-M3-L12 Cross Recessed Pan Head Screws (Attached to SW+JIS W)

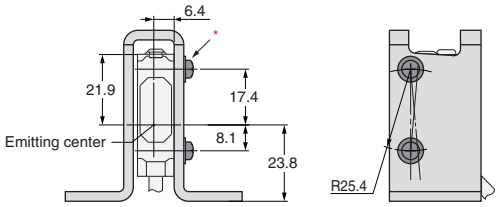
E39-L204



Photoelectric Sensor Accessory are installed (Example of E3AS-L200☐)

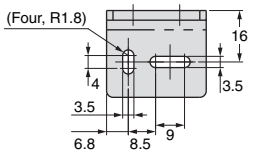


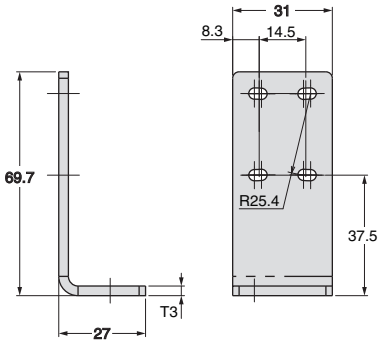




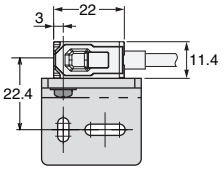
Material: Stainless steel (SUS304)
✻ Accessories
2-M3-L12 Cross Recessed Pan Head Screws (Attached to SW+JIS W)

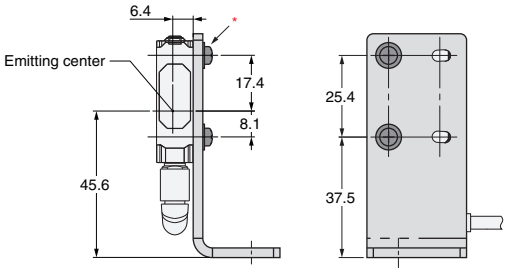
E39-L211





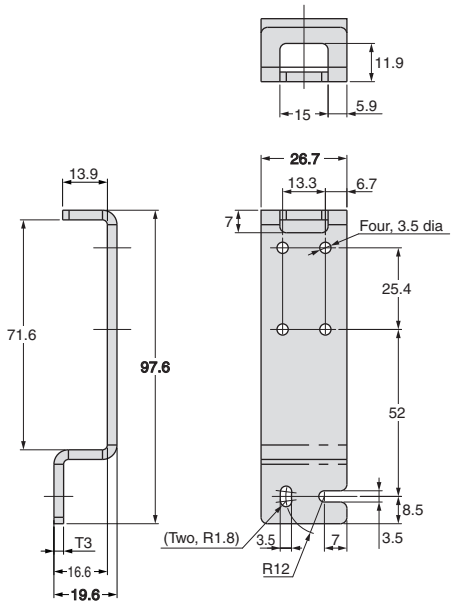
Photoelectric Sensor Accessory are installed (Example of E3AS-L200☐)



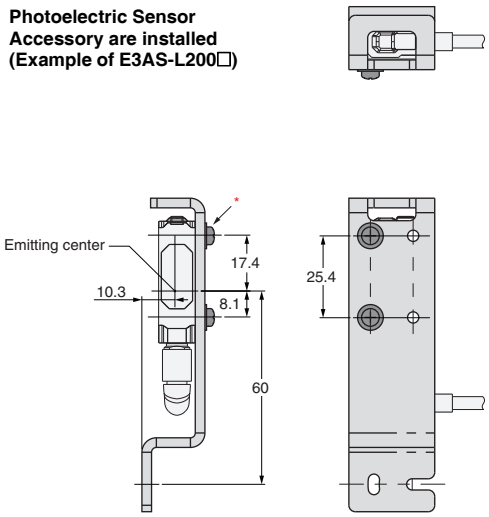


Material: Stainless steel (SUS304)
✻ Accessories
2-M3-L12 Cross Recessed Pan Head Screws (Attached to SW+JIS W)

E39-L212

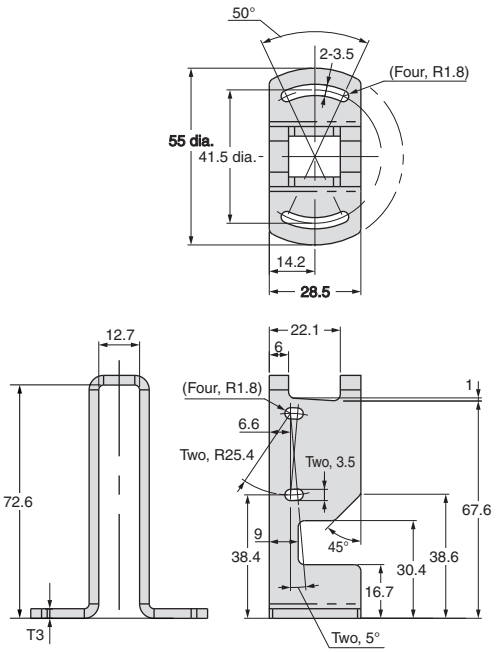


Photoelectric Sensor Accessory are installed (Example of E3AS-L200□)

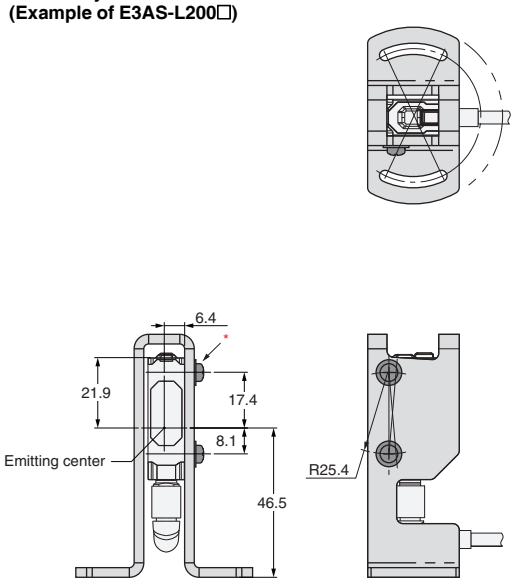


Material: Stainless steel (SUS304)
✻ Accessories
2-M3-L12 Cross Recessed Pan Head Screws (Attached to SW+JIS W)

E39-L214



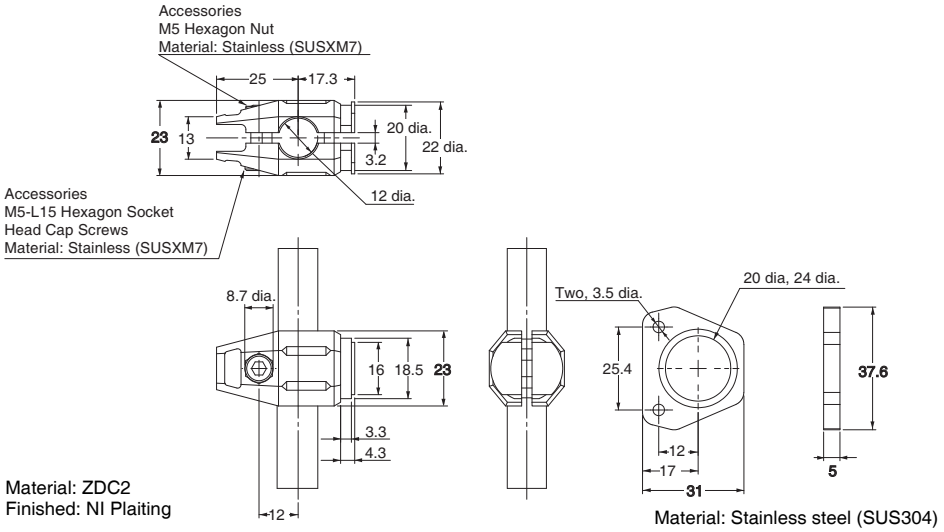
Photoelectric Sensor Accessory are installed (Example of E3AS-L200□)



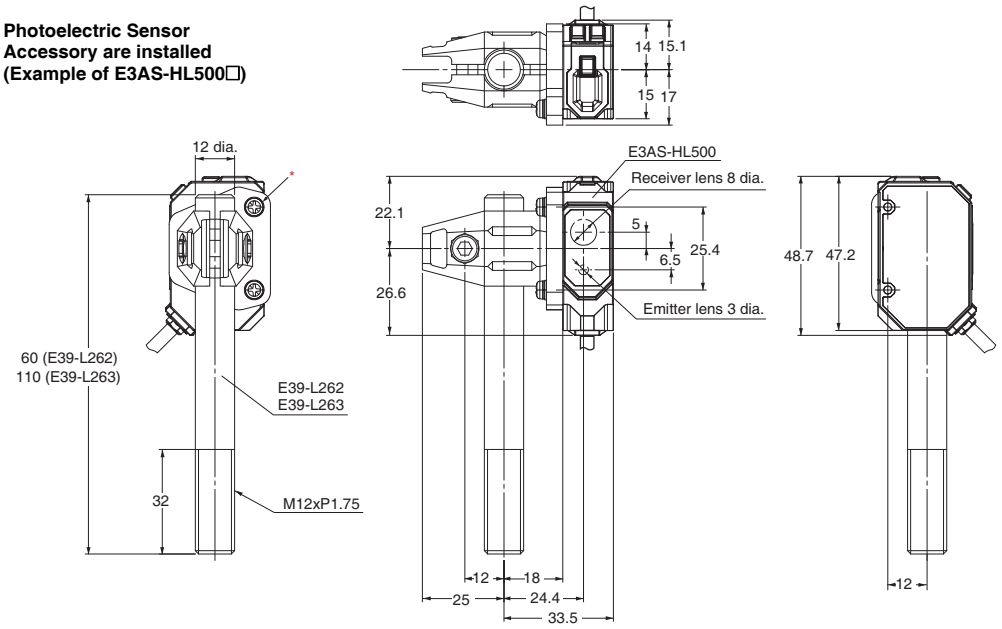
Material: Stainless steel (SUS304)
✻ Accessories
2-M3-L12 Cross Recessed Pan Head Screws (Attached to SW+JIS W)

Common to E3AS series

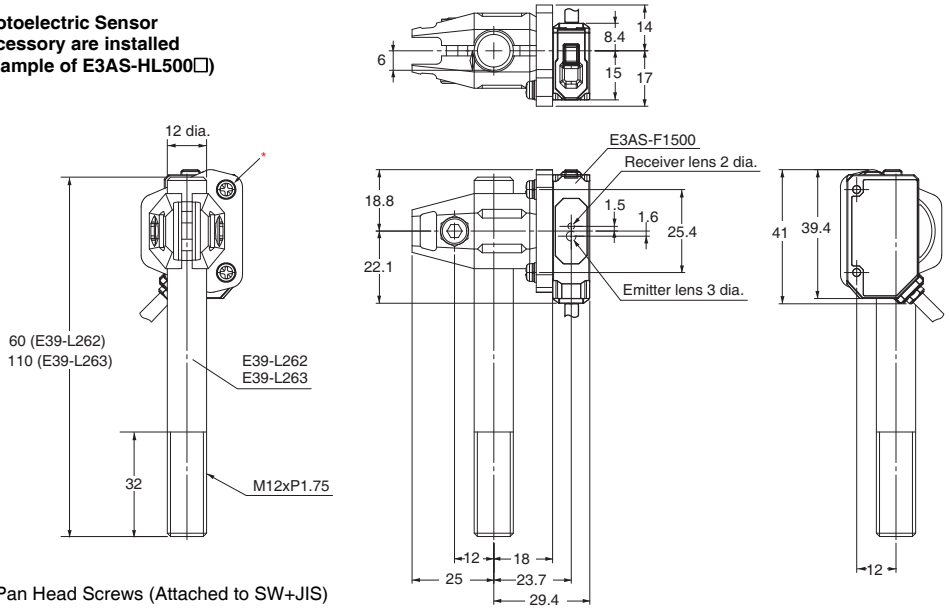
Flexible Mounting Bracket
E39-L261



Photoelectric Sensor Accessory are installed (Example of E3AS-HL500☐)

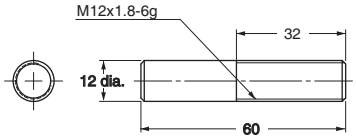


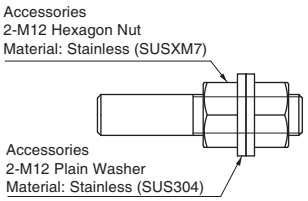
Photoelectric Sensor Accessory are installed (Example of E3AS-HL500☐)



✻ Accessories 2-M3-L10 Cross Recessed Pan Head Screws (Attached to SW+JIS)

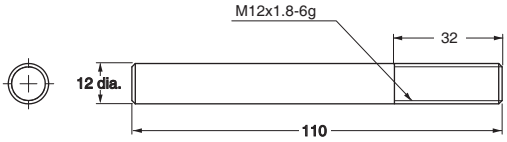
Post 50 mm
E39-L262

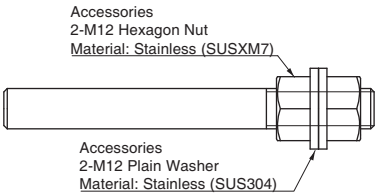




Material: Stainless steel (SUS304)

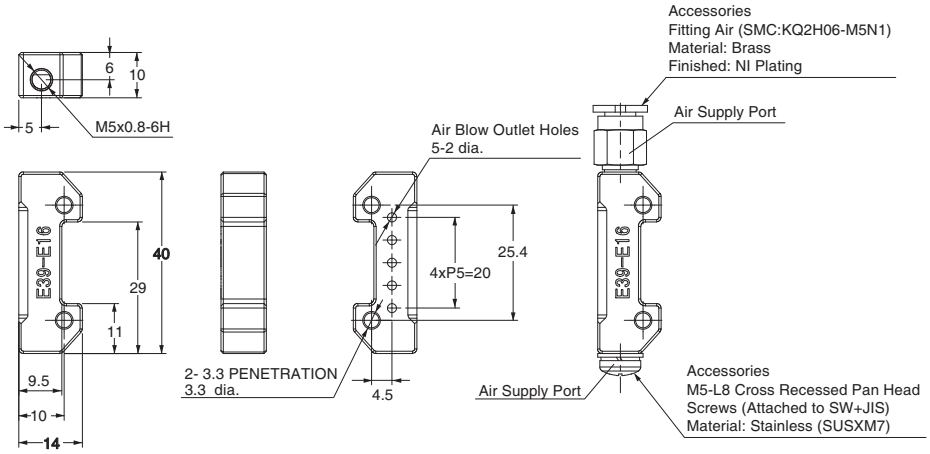
Post 100 mm
E39-L263



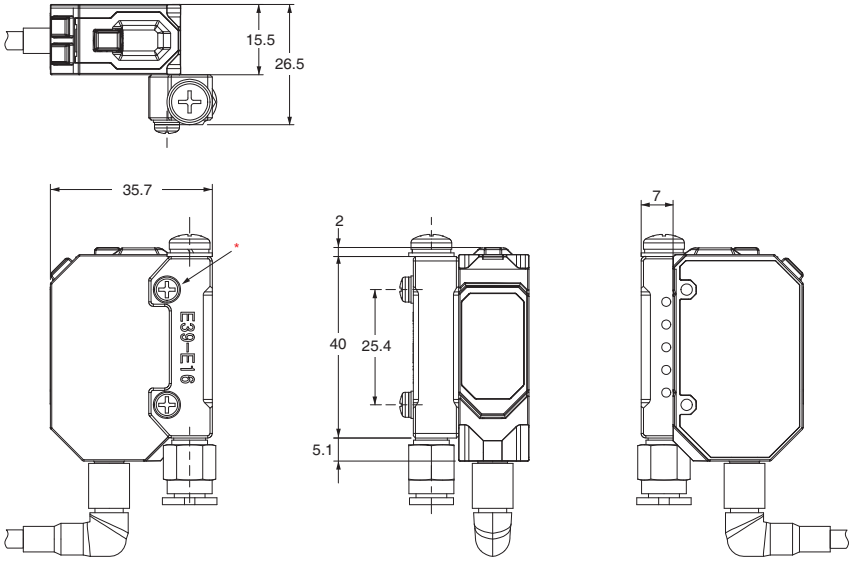


Material: Stainless steel (SUS304)

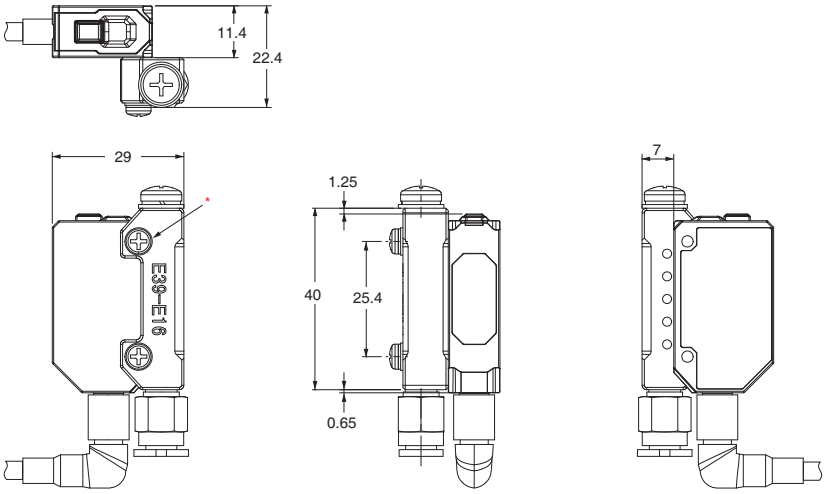
Air Blow Unit
E39-E16



Photoelectric Sensor
Accessory are installed
(Example of E3AS-HL500☐)



Photoelectric Sensor
Accessory are installed
(Example of E3AS-HL500☐)



Material: ZDC2
Finished: NI Plaiting
✻ Accessories 2-M3-L16 Cross Recessed Pan Head Screws (Attached to SW+JIS)

MEMO

Terms and Conditions Agreement

Read and understand this catalog.

Please read and understand this catalog before purchasing the products. Please consult your OMRON representative if you have any questions or comments.

Warranties.

(a) Exclusive Warranty. Omron's exclusive warranty is that the Products will be free from defects in materials and workmanship for a period of twelve months from the date of sale by Omron (or such other period expressed in writing by Omron). Omron disclaims all other warranties, express or implied.

(b) Limitations. OMRON MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, ABOUT NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OF THE PRODUCTS. BUYER ACKNOWLEDGES THAT IT ALONE HAS DETERMINED THAT THE PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE.

Omron further disclaims all warranties and responsibility of any type for claims or expenses based on infringement by the Products or otherwise of any intellectual property right. (c) Buyer Remedy. Omron's sole obligation hereunder shall be, at Omron's election, to (i) replace (in the form originally shipped with Buyer responsible for labor charges for removal or replacement thereof) the non-complying Product, (ii) repair the non-complying Product, or (iii) repay or credit Buyer an amount equal to the purchase price of the non-complying Product; provided that in no event shall Omron be responsible for warranty, repair, indemnity or any other claims or expenses regarding the Products unless Omron's analysis confirms that the Products were properly handled, stored, installed and maintained and not subject to contamination, abuse, misuse or inappropriate modification. Return of any Products by Buyer must be approved in writing by Omron before shipment. Omron Companies shall not be liable for the suitability or unsuitability or the results from the use of Products in combination with any electrical or electronic components, circuits, system assemblies or any other materials or substances or environments. Any advice, recommendations or information given orally or in writing, are not to be construed as an amendment or addition to the above warranty.

See http://www.omron.com/global/ or contact your Omron representative for published information.

Limitation on Liability; Etc.

OMRON COMPANIES SHALL NOT BE LIABLE FOR SPECIAL, INDIRECT, INCIDENTAL, OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS OR PRODUCTION OR COMMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER SUCH CLAIM IS BASED IN CONTRACT, WARRANTY, NEGLIGENCE OR STRICT LIABILITY.

Further, in no event shall liability of Omron Companies exceed the individual price of the Product on which liability is asserted.

Suitability of Use.

Omron Companies shall not be responsible for conformity with any standards, codes or regulations which apply to the combination of the Product in the Buyer's application or use of the Product. At Buyer's request, Omron will provide applicable third party certification documents identifying ratings and limitations of use which apply to the Product. This information by itself is not sufficient for a complete determination of the suitability of the Product in combination with the end product, machine, system, or other application or use. Buyer shall be solely responsible for determining appropriateness of the particular Product with respect to Buyer's application, product or system. Buyer shall take application responsibility in all cases.

NEVER USE THE PRODUCT FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY OR IN LARGE QUANTITIES WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON PRODUCT(S) IS PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

Programmable Products.

Omron Companies shall not be responsible for the user's programming of a programmable Product, or any consequence thereof.

Performance Data.

Data presented in Omron Company websites, catalogs and other materials is provided as a guide for the user in determining suitability and does not constitute a warranty. It may represent the result of Omron's test conditions, and the user must correlate it to actual application requirements. Actual performance is subject to the Omron's Warranty and Limitations of Liability.

Change in Specifications.

Product specifications and accessories may be changed at any time based on improvements and other reasons. It is our practice to change part numbers when published ratings or features are changed, or when significant construction changes are made. However, some specifications of the Product may be changed without any notice. When in doubt, special part numbers may be assigned to fix or establish key specifications for your application. Please consult with your Omron's representative at any time to confirm actual specifications of purchased Product.

Errors and Omissions.

Information presented by Omron Companies has been checked and is believed to be accurate; however, no responsibility is assumed for clerical, typographical or proofreading errors or omissions.
