Introducing Deta Electrical

Founded in 1958, Deta Electrical is a market leading manufacturer and distributor of wiring, lighting, cable management and electrical installation accessories, with a reputation for unrivalled quality, reliability, service and value for money.

As the number one electrical brand of choice amongst new build housing developers, Deta's products are widely specified and installed across the private and social housing sectors, as well as high rise developments, student accommodation and care homes.

Mission & Core Values

Deta's mission is to use its passion and expertise to provide best-in-class products that meet and exceed ever-changing customer needs.

Trusted

A brand trusted by customers, Deta is synonymous with high product quality, extensive product knowledge and exceptional customer service. Robust quality control throughout the development and manufacturing stages are key to delivering quality products.

Progressive

Focused on continuous progression, Deta is committed to investment in innovation, product design and ease of installation. Digitalisation is at the heart of Deta's strategy, supporting stakeholder requirements and maximising its value chain.

Sustainable

Deta is committed to protecting the environment for future generations, to building an inclusive community and to ensuring it acts in the best interests of society.

Think electrical, think... deta[▲]

Product Features

- ▲ CONTEMPORARY DESIGN
- ▲ SLIM AND CURVED PROFILE
- ▲ EASY INSTALLATION
- ▲ FULL RANGE OF ACCESSORIES INCLUDING GRIDSWITCH OPTIONS AVAILABLE

Slimline offers a wealth of features to ensure that installation is fast and effortless. Terminals are angled on many products with white terminal markings and colour coded terminal entries, making wiring simpler, particularly in poor lighting.

Captive, backed-out terminal screws also reduce installation time to a minimum.

All Slimline products are manufactured from a resilient high grade urea with anti-microbial properties and are packaged in individual polybags to ensure that products remain clean and undamaged right up until the point of installation.

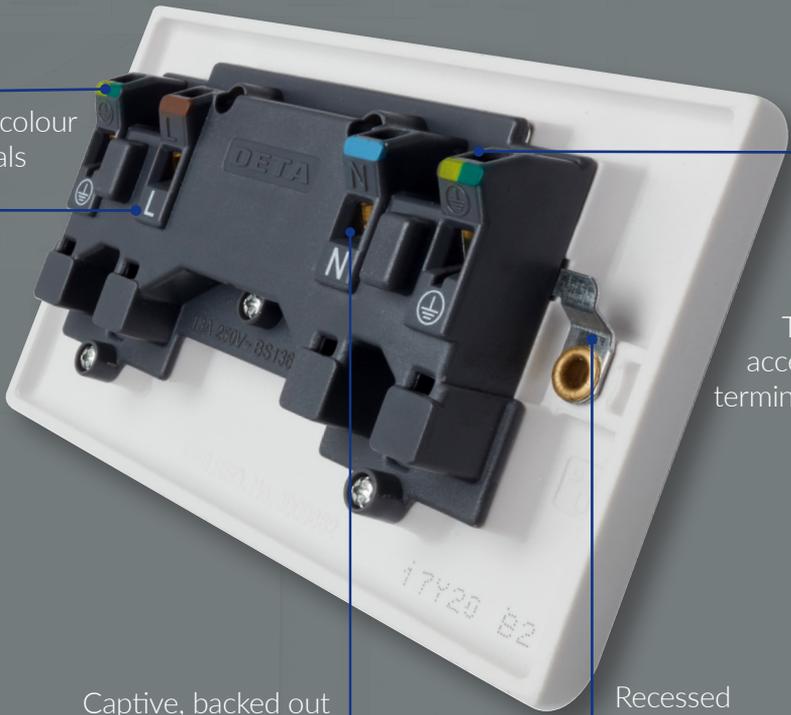

Only 7mm thick

Socket Outlets

- Top facing terminal screws
- Colour coded terminals
- Recessed earth bar
- Captive and backed out terminals
- Single and double pole switched versions
- 2 earth terminals on 2 gang sockets
- Only one size 4mm screwdriver needed
- In compliance with BS 1363: Part 2

Unswitched - 13 Amp

- S1206 1 gang unswitched
- S1208 2 gang unswitched

Single Pole - 13 Amp

- S1207S 1 gang switched
- S1207R* 1 gang switched recessed
- S1209S 2 gang switched
- S1209R* 2 gang switched recessed

Double Pole - 13 Amp

- S1207SDP 1 gang switched
- S1207DPP 1 gang switched with neon
- S1209SDP 2 gang switched
- S1209DPP 2 gang switched with neon
- S1293 2 gang outboard switched
- S1296 2 gang outboard switched clean earth
- S1297 1 gang lockable socket

Back Boxes minimum recommended depth

- 1g Flush** 25mm DB162 **Dry Lining** 35mm DB2540 **Surface** 25mm V1221
- 2g Flush** 25mm DB163 **Dry Lining** 35mm DB2541 **Surface** 25mm V1223

Essential Supply Socket Outlets

- Colour coded terminals
- Recessed earth bar
- Captive and backed out terminals
- Double pole switched sockets
- 2 earth terminals on 2 gang sockets
- Only one size 4mm screwdriver needed
- 35mm deep back box required
- In compliance with BS 1363: Part 2

Double Pole - 13 Amp

- S1291 2 gang switched with red rockers
- S1292* 2 gang switched with red faceplate and rockers
- S1294* 2 gang outboard with red rockers
- S1295* 2 gang outboard with red faceplate and rockers

S1291

S1294

S1292

S1295

A range of switched sockets with highly visible red rockers and/or faceplates for use in areas where it is necessary to permanently highlight essential supply circuits, for example in hospitals, laboratories and computer installations.

Back Boxes minimum recommended depth

- 2g Flush** 25mm DB163 **Dry Lining** 35mm DB2541 **Surface** 25mm V1223

*Special order product, minimum order quantity and lead time applies

USB Charging Socket Outlets

- USB ports deliver up to 4.0A simultaneous charging current across 3 ports, up to a maximum of 3.0A per port
- Uses auto IC technology to detect connected devices and provide optimised high-speed charging
- Captive and backed out, top facing, colour coded terminals with large cable lead-ins and clear embossed and white printed markings
- In compliance with BS 1363: Part 2

S1288

S12882

Single Pole 13 Amp + 4.0A USB

- S1288** 2 gang switched (2 Type A + 1 Type C USB)
- S12882** 2 gang outboard switched ports (2 Type A + 1 Type C USB)

Back Boxes minimum recommended depth

2g Flush 25mm DB163 **Dry Lining** 35mm DB2541 **Surface** 33mm V1224

Round Pin Socket Outlets

- Top facing terminal screws
- Earth pin operated safety shutters
- Only one size 4mm screwdriver needed
- In compliance with BS 546

Unswitched

- S1330*** 1 gang 2A unswitched
- S1331*** 1 gang 5A unswitched
- S1332*** 1 gang 15A unswitched

- Universal dimmers for use with dimmable LED, incandescent and halogen lamps
- Suitable for loads up to 250W LED, 350W incandescent and halogen
- Please refer to Technical Section on pages 127-128 for further information on dimming loads
- Rotary push on/push off dimmers for multiway dimming
- Electronic programming with EPROM memory chip
- Clear terminal markings
- Spare dimmer knobs available
- In compliance with BS EN 60669-2-1

Universal

S1414	1 gang multiway dimming
S1415	2 gang multiway dimming
S1416	3 gang multiway dimming
S1418	4 gang multiway dimming

- Trailing Edge dimmers for use with dimmable LED (trailing edge control), incandescent and halogen lamps
- Suitable for loads up to 100W LED, 250W incandescent and halogen
- Please refer to Technical Section on pages 127-128 for further information on dimming loads
- Mechanical brightness adjustment
- Rotary push on/push off dimmers for 2 way switching
- In compliance with BS EN 60669-2-1

Media Plates

Where multiple power, telecom, TV and AV outlets are required in one place, a Media Plate provides the perfect solution. Media Plates provide the flexibility to configure the installation to meet your individual requirements. To make the installation even easier, the flush mounting box has a divider between the mains voltage sockets and the extra low voltage modules (refer to BS7671 IET Wiring Regulations). Also available in Slimline Décor and Ultra Flatplate ranges.

Back Boxes - Recessed Media Plates minimum recommended depth DB146 **Width** 190mm **Height** 78mm **Depth** 60mm

- Designed to support the flush mounting of a Media Plate
- Includes various cable entry points
- Includes a divider plate to separate LV and ELV services
- In compliance with BS 4662

Metal Boxes

DB146 190mm x 78mm x 60mm

A Discreet and Flexible Wiring Solution for Audio and Visual Technology Within the Home

One Box, Multiple Solutions

Incorporates three (50mm by 50mm) euro module positions suitable for any TV, telephone, data and media outlets and/or an angled power module.

The Recessed Media Plate and a complementary range of euro modules provide a bespoke solution to meet the unique requirements of each home and installation.

Width 206mm Height 86mm Depth 47mm

A Neat Installation

Recessed and installed within the wall, the Recessed Media Plate is an ideal solution for wall mounted television applications.

Supplied as standard with a shallow cover, the initial installation can be neatly finished with a shallow cover prior to mounting of the television.

Once mounted, an optional deeper cover can be used to provide a tidy housing for all cabling and power.

Media Plates

- Colour coded terminals
- Recessed earth bar
- Captive and backed out terminals
- Up to eight single data modules can be installed in a S1985
- Flush back box - 40mm deep (DB184) has segregation between LV and ELV sections

Media Plates

- S1985** 4 gang 13A socket and 8 data module spaces
- S1987** 4 gang 13A socket with TV/FM/DAB quadplexer Co-Axial female, BT secondary and 4 data module spaces fitted with blanks
- S1988** 4 gang 13A socket with Co-Axial male, BT secondary and 6 data module spaces fitted with blanks

- Designed to support the flush mounting of a Media Plate
- Includes various cable entry points
- Includes a divider plate to separate LV and ELV services
- In compliance with BS 4662

Product Features

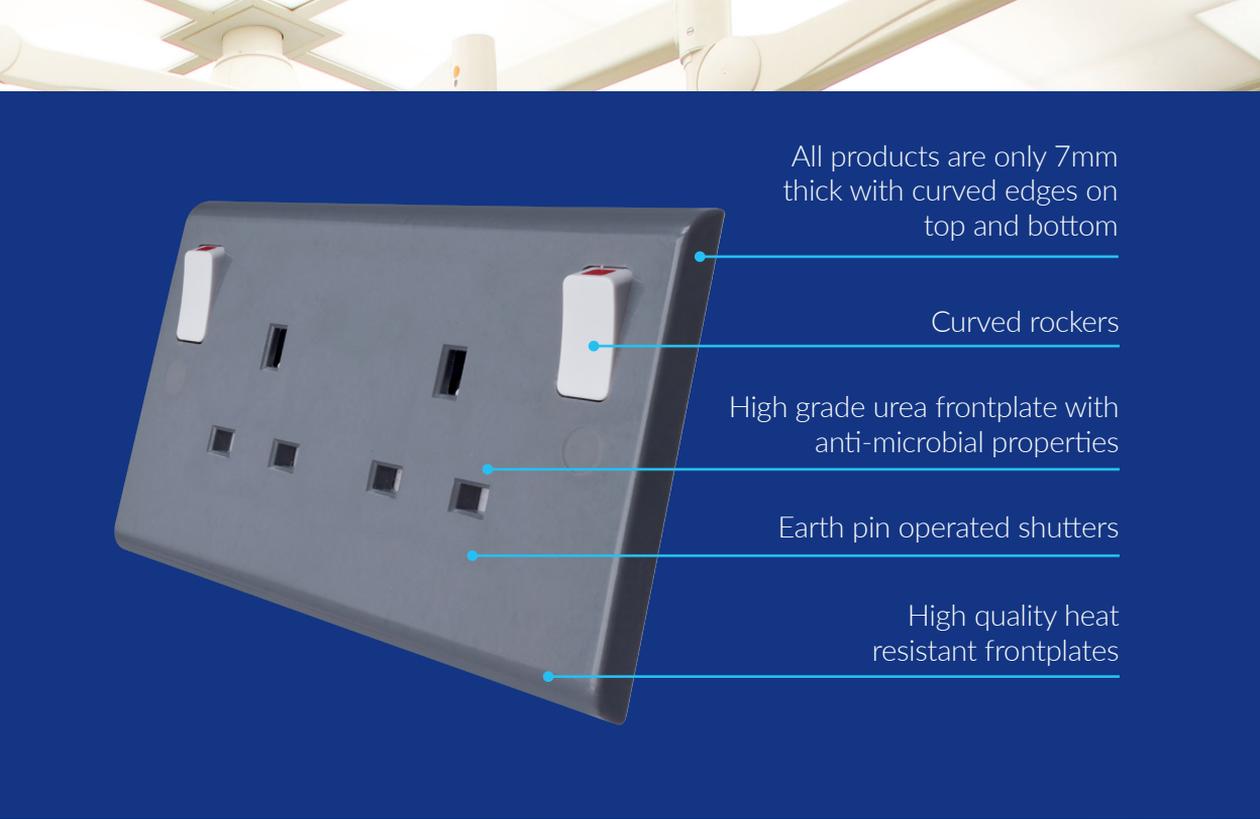

- ▲ MEETS PART M REQUIREMENTS
- ▲ SLIM AND CURVED PROFILE
- ▲ EASY INSTALLATION
- ▲ POWER, TELECOM, DATA AND AUDIO SOLUTIONS
- ▲ IDEAL FOR DOMESTIC BUILDINGS AND FACILITIES USED BY THOSE WITH VISUAL IMPAIRMENTS AND LIMITED DEXTERITY

Slimline offers a dedicated range of Part M wiring accessories with grey frontplates and white switches, making them easily visible to the visually impaired.

Plate Switches offer the option of a wide rocker switch that can be easily operated by those with limited dexterity. Switch rockers on multi-gang plate switches are separated, preventing inadvertent operation.

Socket Outlets offer the option of a two gang switched socket outlet with outboard rockers, preventing inadvertent operation.

The range also includes switches with neon indicators, making it easier for the user to determine if the switch is on or off.

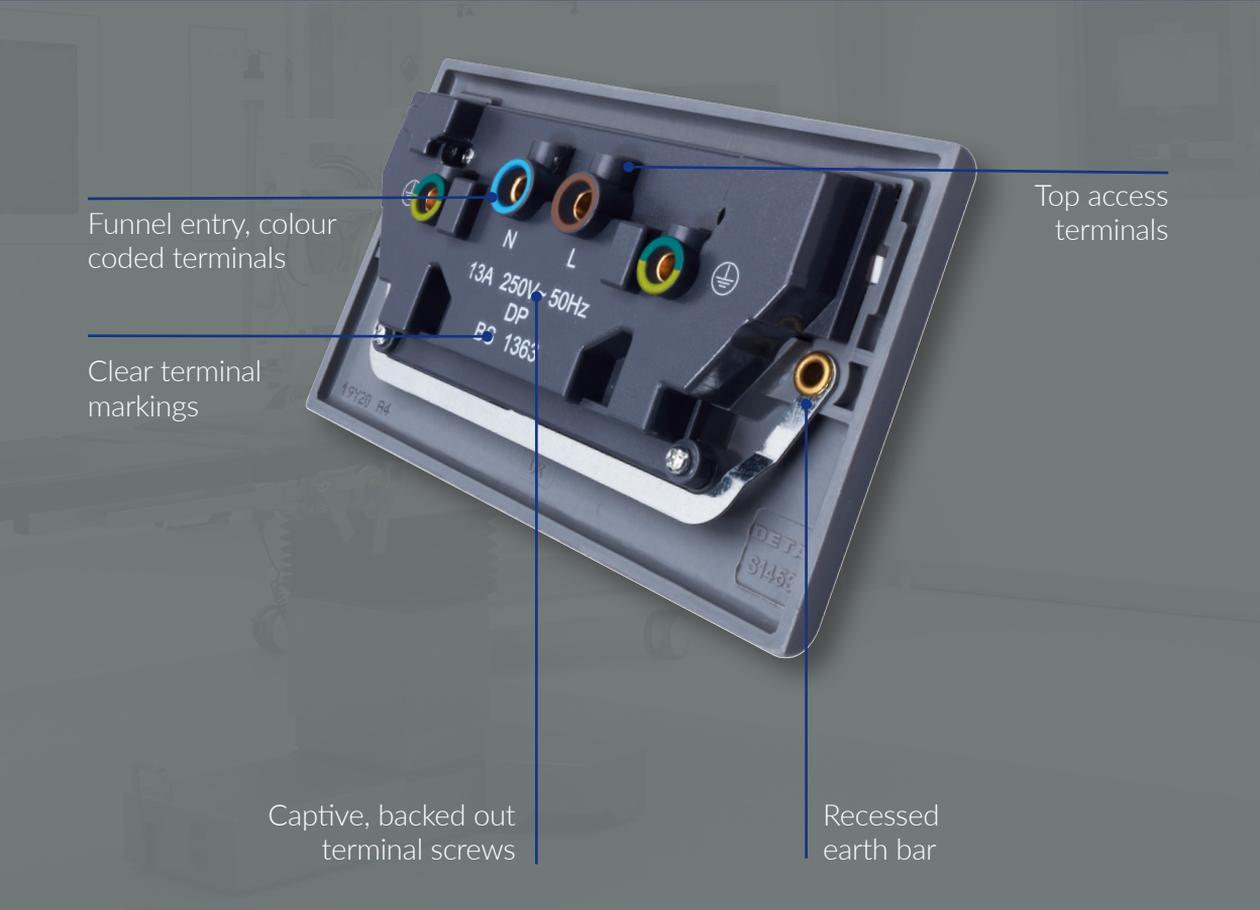

All products are only 7mm thick with curved edges on top and bottom

Curved rockers

High grade urea frontplate with anti-microbial properties

Earth pin operated shutters

High quality heat resistant frontplates

Building Regulations Approved Document M

Building Regulations Approved Document M (commonly referred to as PART M) covers access to and use of buildings and facilities by those that are disabled. Part M involves the provision of wide doorways, ramped access for wheelchairs, design of hand rails, stairwells and so on. Part M comprises of two volumes, Volume 1 (Dwellings) and Volume 2 (Buildings Other Than Dwellings).

With respect to switches, outlets and controls there are design options that should be taken into consideration where the key factors are easy of use, visibility, height and freedom of obstructions.

Accessory Feature	Recommended Design
Plate Colour	Provide a visual contrast with walls
Light Switches	Should use large push pads
Socket/Control Switches	Be separated from other switches to avoid accidental operation
Control Indicators	Incorporate visual indicators as to setting or power status

Accessory Application	Recommended Location
Light Switches (1)	<ul style="list-style-type: none"> • 900mm to 1100mm above the floor • Aligned horizontally with door handles
Socket, Telephone & TV Outlets (2)	<ul style="list-style-type: none"> • 400mm to 1000mm above the floor, preference to lower levels • At least 350mm from room corners
Switches for Permanently Wired Appliances (3)	<ul style="list-style-type: none"> • 400mm to 1200mm above the floor • May be positioned higher if required
Switches that Require Precise Hand Movements (4)	<ul style="list-style-type: none"> • 750mm to 1200mm above the floor
Simple Push Button Controls (5)	<ul style="list-style-type: none"> • Up to 1200mm above the floor
Controls that Require Visual Inspection	<ul style="list-style-type: none"> • 1200mm to 1400mm above the floor

Slimline Screwless

Slimline Screwless provides a range of white and chrome wiring accessories designed to match the clean contemporary styling of the popular Slimline range.

Slimline Screwless offers the same sleek and curved profile as Slimline with no visible fixing screws and a removable frontplate, complementing any modern setting.

Media Plates

Where multiple power, telecom, TV and AV outlets are required in one place, a Media Plate provides the perfect solution. Media Plates provide the flexibility to configure the installation to meet your individual requirements. To make the installation even easier, the flush mounting box has a divider between the mains voltage sockets and the extra low voltage modules (refer to BS7671 IET Wiring Regulations). Also available in Slimline and Ultra Flatplate ranges.

Media Plates

Where multiple power, telecom, TV and AV outlets are required in one place, a Media Plate provides the perfect solution. Media Plates provide the flexibility to configure the installation to meet your individual requirements. To make the installation even easier, the flush mounting box has a divider between the mains voltage sockets and the extra low voltage modules (refer to BS7671 IET Wiring Regulations). Also available in Slimline and Slimline Décor ranges.

- Designed to support the flush mounting of a Media Plate
- Includes various cable entry points
- Includes a divider plate to separate LV and ELV services
- In compliance with BS 4662

Finishes

Chrome, Stainless Steel and White finishes are available. When ordering, please indicate preference by adding suffix CH (Chrome), SS (Stainless Steel) or WH (White)

Grid Frames

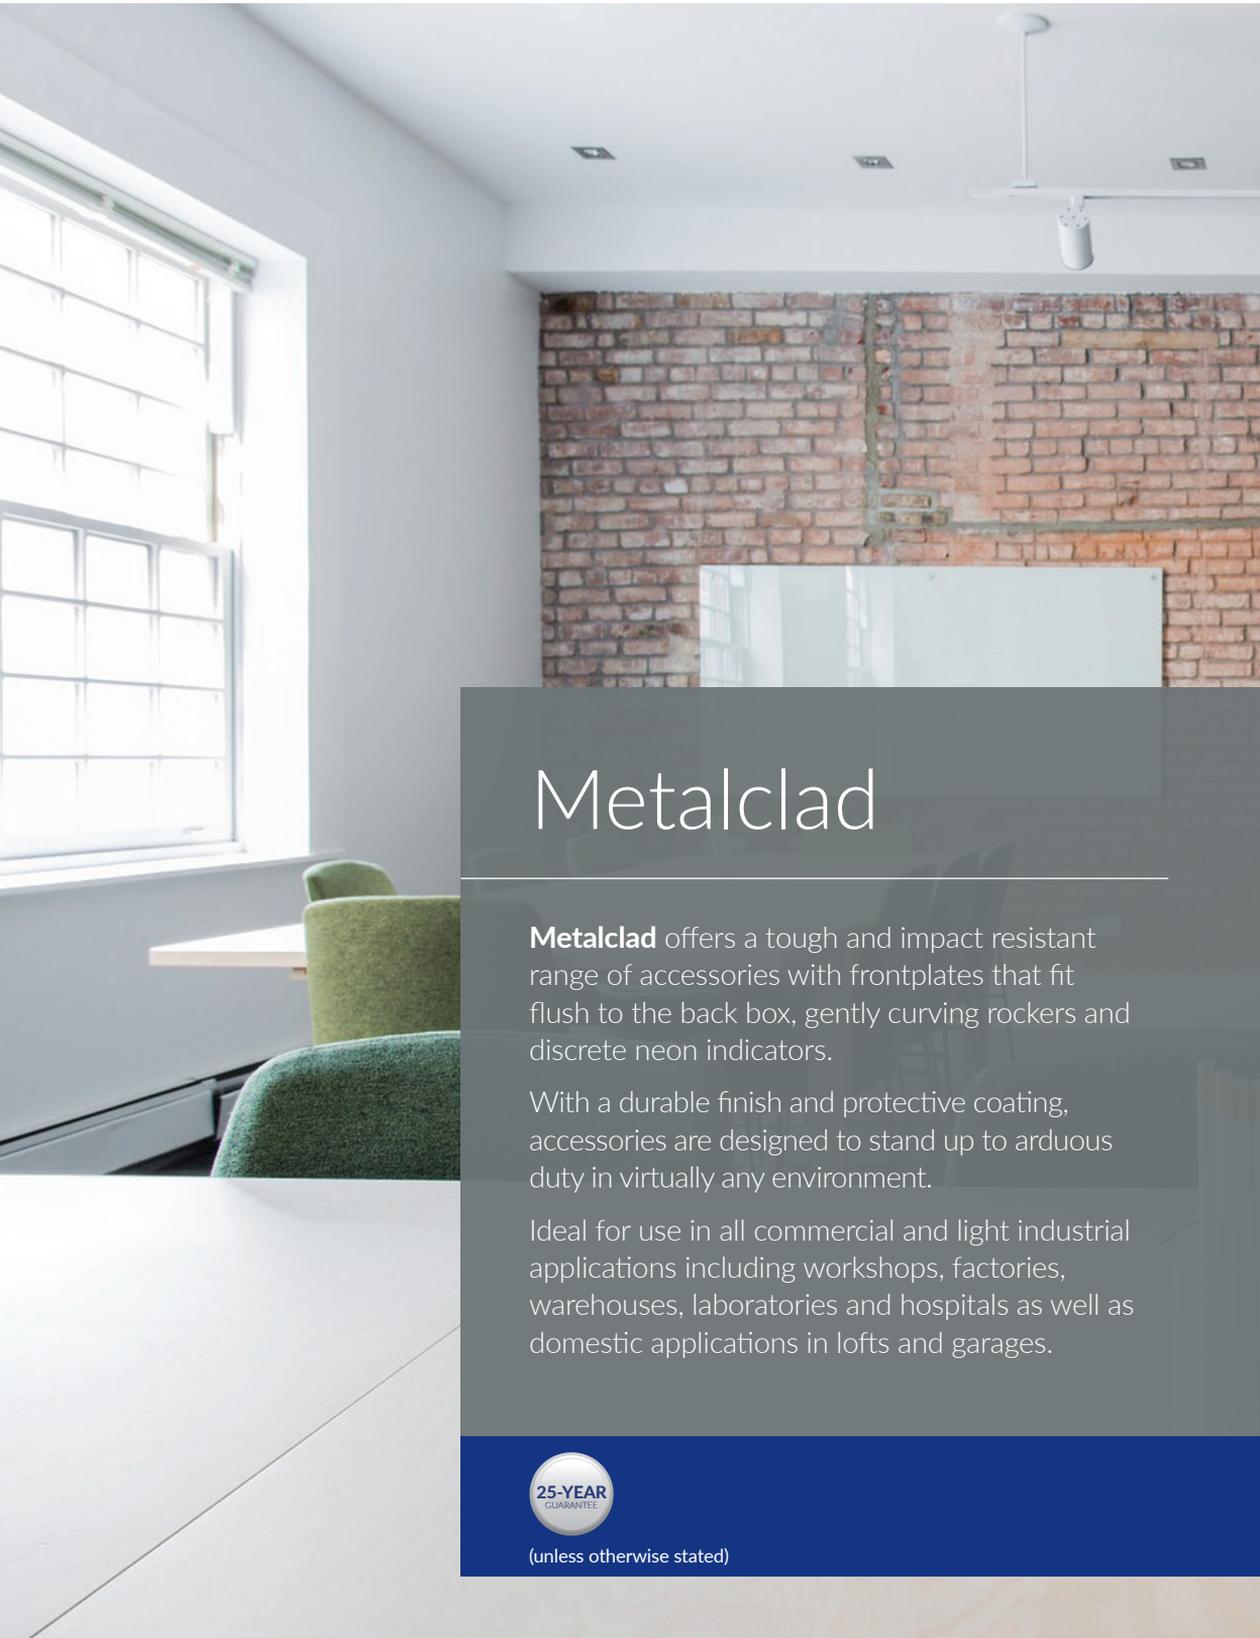

Ultra Screwless frontplates are supplied with grid frames

Back Boxes

A wide range of back boxes are available, please see the Selection Chart on pages 85. We recommend using the deepest back box available to give the most amount of wiring space. Boxes for 6g up to 24g have both 20mm and 25mm knockouts.

*Special order product, minimum order quantity and lead time applies

Metalclad

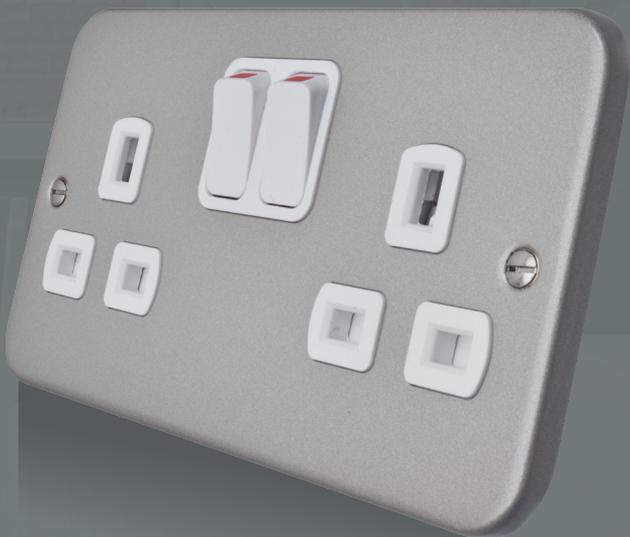

Metalclad offers a tough and impact resistant range of accessories with frontplates that fit flush to the back box, gently curving rockers and discrete neon indicators.

With a durable finish and protective coating, accessories are designed to stand up to arduous duty in virtually any environment.

Ideal for use in all commercial and light industrial applications including workshops, factories, warehouses, laboratories and hospitals as well as domestic applications in lofts and garages.

Product Features

- ▲ TOUGH, IMPACT RESISTANT
- ▲ DURABLE FINISH
- ▲ EASY INSTALLATION
- ▲ IDEAL FOR DOMESTIC, COMMERCIAL AND INDUSTRIAL APPLICATIONS

Metalclad installation could not be simpler with clear markings, large cable lead-ins and captive backed out terminal screws.

Back boxes are supplied with all products (except blank plates) and incorporate 20mm knockouts on all sides and the rear, providing maximum flexibility.

Frontplates are packaged in a separate polybag to provide additional protection prior to second fix.

Gridswitch

Gridswitch offers a flexible switch management solution for commercial and domestic applications.

Frontplates are available in all Deta wiring accessory ranges and finishes, with sizes ranging from 1 gang up to 24 gang, providing a versatile solution for the most demanding projects.

An extensive range of modules including switches (10A, 20A, double pole, key and marked), dimmers, fuses, neons and accessories, available in plastic and metal finishes.

(unless otherwise stated)

Product Features

- ▲ PACKED IN ITS OWN PROTECTIVE BAG
- ▲ GRID FRAMES ARE SUPPLIED SEPARATELY
- ▲ FIXING SCREWS IN BAGS, ATTACHED TO REAR OF PLATES TO PREVENT SCRATCHING
- ▲ A COMPREHENSIVE RANGE OF FRONT LOADING SNAP-IN MODULES

Gridswitch offers a wealth of features across the range to ensure that installation is carried out with the minimum of effort.

All modules have clear terminal markings and are front loading so they simply clip in place, which means they can easily be upgraded or replaced without the need to remove the mounting grid frame.

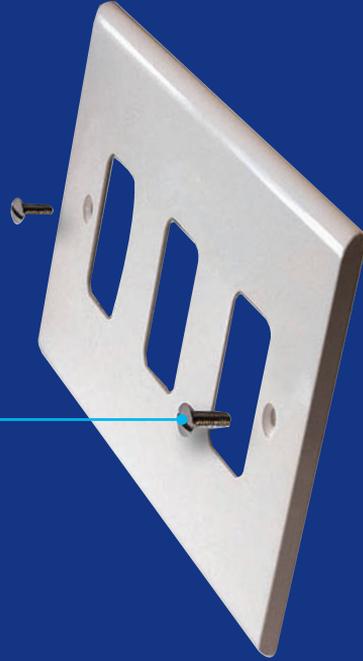

For larger frontplates, Deta back boxes have been designed deeper for ample wiring room, for example the back box for a 24 gang plate is 60mm deep.

Frontplates available in all Deta wiring accessory ranges in a choice of finishes

The background of the page is a photograph of a bright, minimalist interior. On the left, a light-colored wooden chair with a curved backrest stands on a light wood plank floor. To the right, a table is partially visible, set with white dishes, a teapot, and a cup. In the background, white curtains hang in front of a window, and a plain, light-colored wall is visible. A dark grey semi-transparent box is overlaid on the right side of the image, containing the title and descriptive text. At the bottom of this box is a dark blue horizontal bar containing a circular logo.

Ceiling Accessories

Ceiling Accessories include a wide range of high quality pendants, battens, lamp holders and ceiling switches, offering durability, reliability and ease of installation for any domestic or commercial application.

Contents

Ceiling Rose & Lamp Holder	94
Standard Pendants	95
Pendant & Battens with Cover	94
Safety Pendant & Battens with Cover	95
Ceiling Switches	95

Product Features

Ceiling Accessories offer a wealth of features to ensure that installation is fast and effortless.

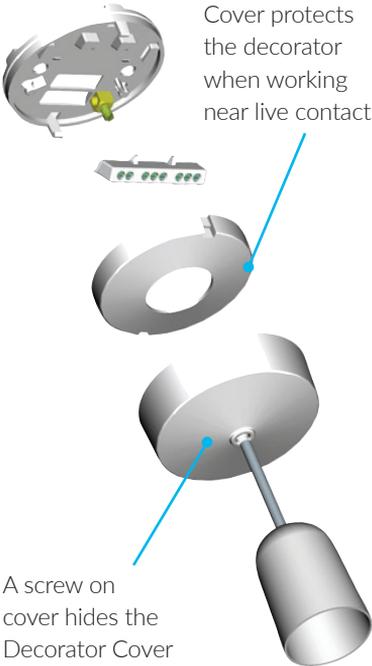

Pendants and battens are offered with or without a unique patented clip on “Decorator Cover” that shields live wires and terminals in the ceiling rose, making it safe for decoration to be carried out quickly and easily before the outer cover is screwed into position.

Safety lamp holders have a unique shutter action that retracts and shields the contact pins when a lamp is removed, providing complete protection and safety from live contacts. Safety pendants and battens are supplied complete with a “Decorator Cover” as standard.

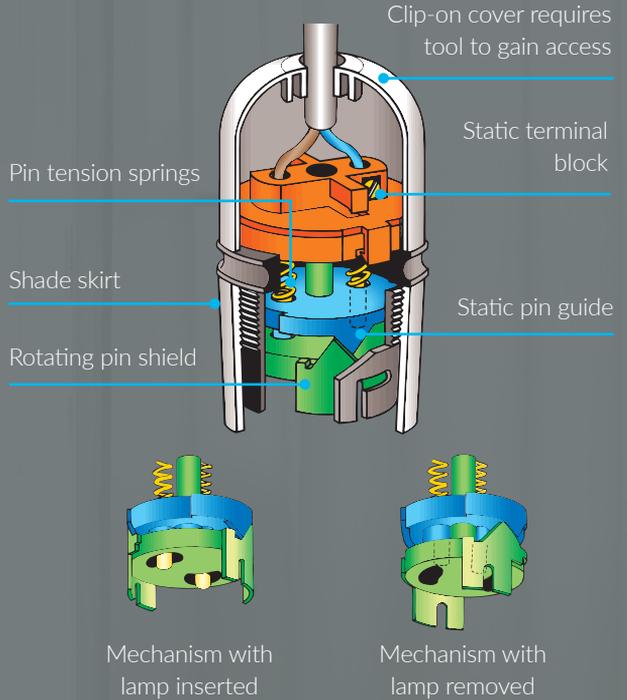

Decorator Cover

The Decorator Cover protects the decorator when working near live contacts

Circuit Protection

Deta's **Protect⁺** Circuit Protection range provides a high quality and versatile solution for any domestic installation, whilst offering home occupiers maximum protection against short circuits, circuit overloads, arc faults and residual earth leakage within the home.

The range meets the requirements of amendment 2 the 18th Edition IET Wiring Regulations (BS 7671:2018 + A2:2022) and is comprised of safe and stylish enclosures and a wide selection of devices.

(unless otherwise stated)

Contents

Introduction	98
Product Features	100
Protect+ Enclosures	101
Garage & Shower Enclosures	101
Meter Cupboard Units	101
AFDD/RCBOs	102
RCBOs	102
MCBs	103
RCDs	103
Accessories	103

Protect+ Circuit Protection

Protect+ is a comprehensive range of enclosures, devices and accessories, providing maximum protection against short circuits, circuit overloads and residual earth leakage.

Accessories including DIN rail mounted blanks and visor locks complete the range, ensuring safety by protecting live parts and restricting unauthorised access to circuits during the construction phase of a new build house.

Stylish & Versatile

Designed with a pressed cover and visor, the stylish enclosures have a neutral white paint finish. Protect+ enclosures meet the requirements of the 18th Edition IET Wiring Regulations (BS 7671:2018 +A2:2022), being unobtrusive and blending into the décor of any modern home.

Incorporating multiple knockout cable entry points, as well as clip in grommets, the enclosures minimise exposed cabling, providing a high quality and versatile solution for most domestic installations.

Complete Solution

Protect+ enclosures are easily configured and suitable for both new build homes and the upgrade/refurbishment of existing properties.

All enclosures now come with a factory fitted Type 2 SPD to protect electronic equipment connected within the property from transient over voltages.

Main Switch enclosures fitted with RCBOs and AFDDs on individual circuits provide superior protection, convenience and flexibility for occupants.

High Integrity enclosures incorporating a 100A main switch plus 2 no 100A 30mA Type A RCDs provide a cost effective solution where budget dictates.

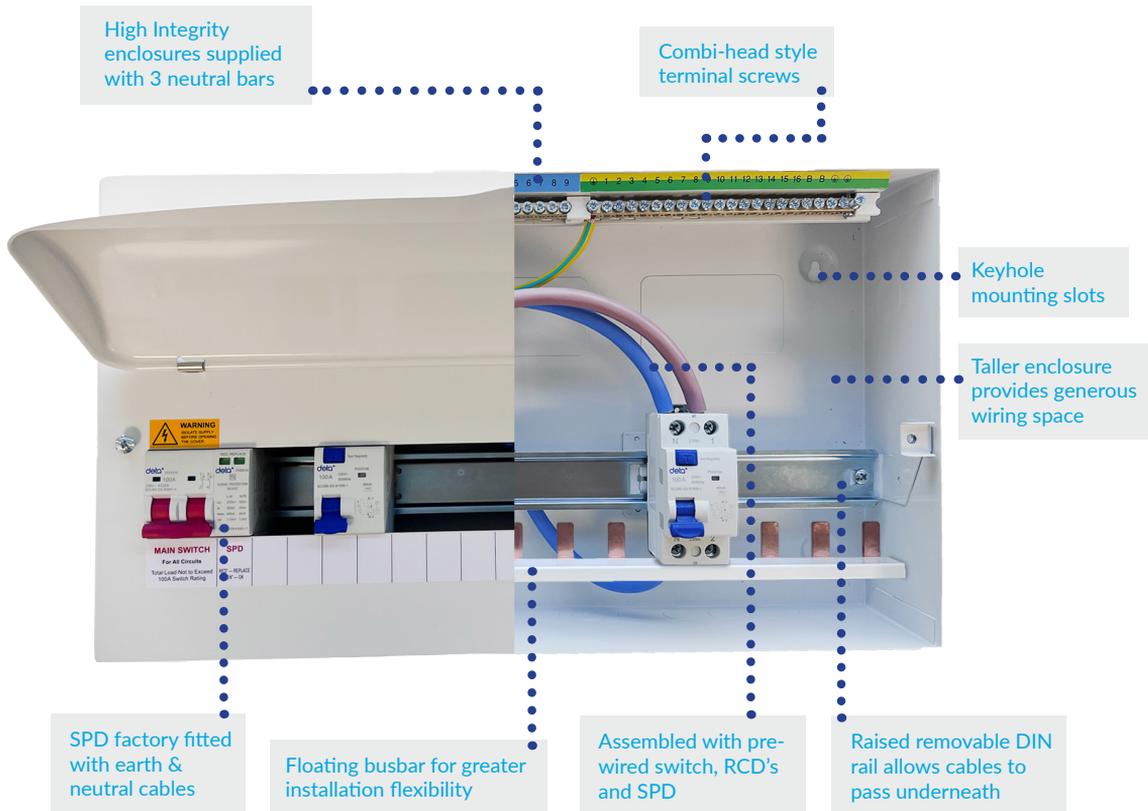

Surge Protection

Surge Protection Devices (SPDs) redirect transient overvoltages, protecting valuable electronic devices and appliances from premature aging, damage or destruction.

The SPD is factory fitted after the main switch and fed with a standard busbar with Neutral and Earth cables connected. Each device is rated at 100A and incorporates a visual indication window for normal operation or fault status. Taking up only one module, the SPD does not require a separate MCB for protection, relying on the upstream DNO fuse.

Product Features

Lockable Visor

A lock can be installed on the hinged lid of the enclosure to prevent unauthorised access to circuits during construction. When building works are completed, the lock can be removed and replaced with a blanking cap.

Incoming Mains Tail Clamp

A mains tail clamp is included as standard on all enclosures to provide additional restraint to the incoming tails.

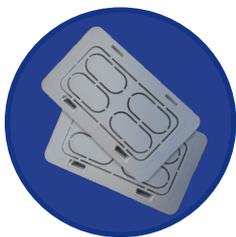

Maximum Torque Settings

Devices have cable strip lengths and recommended torque settings conveniently marked on the side of each device with torque settings also on the front of the device to aid installers doing an EICR or similar retro work.

Knockouts

Varying sizes are positioned along the top and bottom of the enclosure as well as the sides with 32mm knockouts aligned with main switch position to aid installation of incoming tails.

Protect+ Enclosures

- Lockable visor to prevent circuits being switched on accidentally during house build – available separately
- Conduit entry on top, bottom and side walls
- Large rectangular knockouts on rear of enclosure, supplied with grommets
- Raised and removable DIN rail to allow cables to pass underneath
- 10-year guarantee and compliant to BS 7671:2018:A2:2022 wiring regulations

Fire Detection Systems

Design Requirements

Fire detection systems design requirements in domestic premises are laid out in the BS 5839-6.

This code of practice outlines the requirements for the design of fire alarm systems in both new properties and in retrofit properties. The standard details the types of alarm (Grade) and the level of protection (Category) required for specific dwellings.

Grade of Systems

Data's range of fire alarms can be installed to meet the requirements of grade D1 and D2 installations (see BS5839-6:2019 for full details).

Grade	System	Primary Power	Back Up Power	For Use In	Optical Alarm	Heat Alarm
D1	Integrated System of one or more alarms	Mains Power	Tamper Proof Long Life Battery	Rented or Multiple Occupancy Properties	1164 ¹	1166 ²
D2			Replaceable Battery	Owner Occupied Properties	1163 ¹	1165 ²
	Combo Alarm				1171 ^{1&2}	1171 ^{1&2}

¹ Optical Alarms conform to BS EN 14604:2005/AC:2008

² Heat Alarms conform to BS 5446-2:2003

Category of Systems

BS 5839-6:2019 identifies that the level of protection required in domestic properties must relate to fire risk and stipulates where alarms need to be installed. It identifies three distinct categories of protection required (see BS5839-6:2019 for full details).

Grade	Protection Level	Alarm Installation Criteria	Rooms
LD1	High	All circulation areas that form part of an escape route from the premises and in all rooms and areas other than those with negligible sources of ignition such as toilets, bathrooms and shower rooms	Hallways, Landings, Kitchen and Living Rooms, Bedrooms, Airing / Meter Cupboards
LD2	Medium	All circulation areas that form part of an escape route from the premises and in specified areas that present high risk to occupants including any kitchen and principal habitable room	Hallways, Landings, Kitchen and Living Rooms
LD3	Low	All circulation areas that form part of an escape route from the premises	Hallways and Landings

Carbon Monoxide Detection

Carbon Monoxide is a poisonous gas created when fossil fuels go through a combustion process. It is tasteless and odourless and if you are exposed to it in unvented areas, it can have very serious health effects. There are various appliances around the home that can create carbon monoxide. These fossil burning appliances can include boilers, gas fires or portable heaters, your fireplace and even gas cookers. These appliances should be vented correctly to allow

any carbon monoxide to be exhausted into the open atmosphere, taking it safely away.

Carbon monoxide is created when the combustion of these fossil fuels is incomplete. To ensure that appliances are working correctly, they should be maintained regularly, preferably annually. The level of carbon monoxide is measured in parts per million (ppm). The maximum allowable concentration for continuous exposure is 35ppm in an 8 hour period.

Know the danger signs

- Staining, sooting or discolouration around the appliance
- A yellow or orange flame where normally blue
- Condensation on walls and windows once the appliance is lit
- Rusting or water streaking on appliance cabinet/vent/chimney
- Loose or disconnected vent/chimney connections or guards

What the Regulations Say

In England and Wales, the Building Regulations Approved Document J, 2013 edition, calls for carbon monoxide alarms to be provided in the room where a solid fuel appliance is installed, whether it is a new or replacement appliance being installed (clause 2.34). Where properties have flues that are concealed and in voids, inspection hatches need to be fitted, but until this happens CO alarms should be installed in the interim (TB008 Edition 2).

In Scotland, the Building Standards Technical Handbook 2017: Domestic Buildings requires carbon monoxide alarms to be fitted in any room where a new or replacement fixed combustion appliance is installed (excluding an appliance used solely for cooking) and in any room that has a flue running through it (clause 3.20.20).

Positioning of Alarms

Alarms should be placed in the same room as the fuel burning appliance, between 1-3m away horizontally. The alarm should also be placed in any room that has a flue running through it.

Alarms should not be positioned in enclosed spaces, for example behind curtains or cupboards, and not next to doorways or windows.

- Mains powered with battery back-up
- Test & Silence button
- Sound output 85dB at 3m
- Optical alarms conform to BS EN 14604:2005/AC: 2008
- Heat alarms conforms to BS 5446-2: 2003

Optical Smoke Alarms

- 1163 Replaceable 9V battery back-up¹
- 1164 Tamper proof long life battery back-up²

1163

¹ For use in Grade D2 fire detection systems

² For use in Grade D1 fire detection systems

Heat Alarms

- 1165 Replaceable 9V battery back-up¹
- 1166 Tamper proof long life battery back-up²

1165

Fire and Carbon Monoxide Mains Powered Alarms

Easy to Install

Easy fix mounting base provides large wiring space, with alarm connected using a fly lead. Alarm head easily detachable, providing access to the battery.

Dust Protection

Foam gasket on base and dust cover on alarm head protects the alarm from dust ingress during building works.

Interlinkable

(up to 12 units)

Fire and Carbon Monoxide alarms interlink to form one integrated alarm system, with different alarm patterns to identify alarm trigger.

LED Indicators

Including power, missing/low battery, and alarm status indications. A red LED flashes on the initiating alarm, providing a visible indication.

1171

Multi-Sensor Fire Alarm

Combines optical and heat for enhanced fire response

Mains Powered

Long life lithium battery back up

Recommended for:

Carbon Monoxide Alarm

1139 Tamper-proof battery

New Regulations Now in Effect

On the 23rd November 2021, the Government announced its response to a consultation on the use of smoke and carbon monoxide (CO) alarms in domestic properties.

The results of the consultation led to an extension of the **Smoke and Carbon Monoxide Alarm (England) Regulations 2015**, which has been introduced. **The Smoke and Carbon Monoxide Alarm (Amendment) Regulations 2022** came into effect from 1 October 2022. What this means is that both smoke and CO alarms are required in many more homes in England and that landlords must comply or risk a fine of up to £5,000.

Prior to the new regulations, it was only necessary for private landlords to install a CO alarm in properties where a solid fuel burning appliance was fitted. Since 2015, all houses in the private rented sector have had to have at least one smoke alarm on each storey where a room is used as living accommodation.

- **Sleek Compact Design**
- Height 90mm x Width 135mm x Depth 50mm
- **10 Year Expected Lifecycle**
- Sensor and Battery (Sealed Lithium)
- **Status Indicators**
- Alarm, Power & Fault
- **Alarm**
- Accelerated Response Time as CO Exposure Increases Loud (>85dB at 1 meter)
- **CO Level**
- Displayed as Parts Per Million (PPM)
- **Operating Conditions**
- Temp (C) - 10 to +40 Humidity 30-90%

Carbon Dioxide and Temperature Monitor

- 230V mains rated
- Live readouts for CO₂ levels (PPM) and temperature (°C)
- CO₂ readouts for 8 hour (average) and 24 hour (average and peak) periods
- Traffic light system indicating CO₂ levels and if improved ventilation is required
- Suitable for installation within a 1 gang 35mm deep flush mounting back box
- 2-year guarantee

1142

Carbon Dioxide & Temperature Monitor

1142

Carbon dioxide and temperature monitor

Carbon Dioxide Detection

Carbon Dioxide (CO₂) is present in the external air we breathe at concentration levels of around 400 parts per million. Whilst it is not harmful to health at low concentration levels, as people release CO₂ into the air when they exhale, increased levels of CO₂ can occur.

CO₂ Monitors are generally installed in the main or principal bedroom in a dwelling to raise occupant awareness of CO₂ levels (and therefore other pollutants) present in their homes and of the need for them to take proactive measures to increase ventilation.

Deta's Carbon Dioxide and Temperature Monitor incorporates state of the art infra-red technology to accurately measure CO₂ levels within the home, providing occupants with clear readings as to air quality and guidance on whether action should be taken to improve it.

Slim Compact Design

With a sleek design and protruding only 15mm from the wall, Deta's CO₂ monitor has the same dimensions as a standard light switch, allowing it to blend discreetly into the decor of any room.

Easy Install

Fitting neatly within a 35mm flush back box and with a two part assembly, the monitor head can be easily clipped onto the mounting plate, allowing for installation after decorating is completed.

Compliant with the Scottish Technical Handbook

Displays live readouts alternating between CO₂ (PPM) and temperature (°C) with CO₂ logged over a 24 hour period. Readings for 8 hour (average) and 24 hour (average and peak) provided along with a traffic light indication to meet the requirement for CO₂ monitoring in domestic dwellings.

Relay Bases

- Mains powered (1192 with battery backup)
- Volt-free contacts to switch 240VAC/24VDC auxiliary devices
- Switched input connection for sprinkler system or similar
- Replaces standard Deta alarm base to interlink with mains powered smoke, heat and CO Alarms

Residential Lighting

Deta's **Residential Lighting** range offers energy efficient solutions for interior and exterior lighting. From Fire Rated Downlights, Surface Luminaires and Shaver Lights to Wall Lights and Lanterns, the range offers a number of modern and traditional luminaires suitable for multiple applications. Motion sensors are the latest addition to the range, providing the option for lighting control.

Polycarbonate Lanterns	118
Die Cast Lanterns	118

Fire Rated Downlights

- Supplied with a dimmable GU10 LED lamp
- 2800K or 4000K colour temperature lamp options
- Compatible with Deta trailing edge and universal dimmers

COMPATIBLE
WITH ALL
DETA DIMMERS

L1701CH#

Fire Rated Downlights

- L1701WH#** Fire Rated Dimmable Downlight - White
- L1701CH#** Fire Rated Dimmable Downlight - Shrome
- L1701SC#** Fire Rated Dimmable Downlight - Satin Chrome

Installation Information	
Cut Out Ø	Min. Void Depth
70mm to 75mm max.	120mm

Available with either a 2800K or 4000K lamp. When ordering, please indicate preference by adding the suffix 3 for 2800K or 4 for 4000K. e.g. L1701CH3 for a 2800K LED Lamp

NB. 5 year lamp warranty based on maximum usage of 8 hours per day

Integrated Fire Rated Downlights

- Integrated LED FRD for residential & commercial applications
- 5-8W Power Selectable, 550lm to 880lm, CCT4 Selectable 2700K, 3000K, 4000K, and 6000K (Warm whites, Cool White, Daylight), 60° Beam Angle, IP65, 220-240V
- 30, 60 & 90 minute fire rated – Building Regulations Part B compliant, and reduces passage of sound (Part E of Building Regs.)
- Dimmable and optimised for use with Deta Universal Dimmers
- Plug and Play driver connector with loop-in/loop-out screwless terminal block for easy termination of T&E cables
- Easy switching between two power settings and four colour temperatures with both switches located under the product bezel
- IP65 for front rating for total protection against dust and low pressure jets of water from any direction
- IC rated construction allows insulation to be laid directly over the top of the fitting, mounting springs suitable for single and double thickness plaster board

L1502WH

Integrated Fire Rated Downlights

- L1502WH** 5-8W CCT4 IP65 IFR Downlight - White
- L1502CH** 5-8W CCT4 IP65 IFR Downlight - Chrome
- L1502SC** 5-8W CCT4 IP65 IFR Downlight - Satin Chrome

Installation Information	
Cut Out Ø	Min. Void Depth
70mm	60mm

IP65 Fire Rated Downlights

Fire Safety

30 minute fire resistant tested in the following floor constructions:

- ✓ James Jones I-Joist
- ✓ Masonite I-Joist
- ✓ Metsa Wood I-Joist
- ✓ Staircraft I-Joist*
- ✓ Steico I-Joist
- ✓ Metal Web Joist
- ✓ Solid Timber Joist
- ✓ Concrete

*Tested for 30 & 60 minutes

Multi Purpose

Rated IP65 and dimmable as standard, allows for one fitting to be installed in all internal areas, from hallways and living areas to bathrooms and kitchens.

Easy to Install

Large terminal housing provides ample wiring space, includes push fit terminals, screwless cable clamp and 180 degree hinged lid, minimising installation time.

Protractable Lampholder

The spring-loaded lamp holder extends when the bezel is removed, providing easy access.

Ventilation

Top and side vents designed to maximise heat dissipation ensuring lamp performance and longevity, with the terminal housing acting as an insulation separator.

Stratus 8W Surface Luminaire

- White or chrome bezel, opal diffuser
- 8W LED
- 520 lumens
- 4000K colour temperature
- Integral driver
- IP65 rated

L1011WH

L1011CH

8W Standard - White/Chrome

- L1011WH** 8W LED standard - white
- L1011CH** 8W LED standard - chrome

Lampholder 'T' Rating

Bayonet (B22) lampholders without a T marking or marked T1 are suitable for temperatures on the cap up to and including 165°C. Bayonet (B22) lampholders with a T2 marking are suitable for temperatures on the cap up to and including 210°C.

Alternatively T ratings may state the operating temperature, e.g. T190 would equate to 190°C.

Lamp cap temperatures will depend on the lampholder orientation, lampshade or enclosure used and lamp rating.

Refer to the IET Wiring Regulation (BS7671) for the use of T2 rated lampholders.

Universal Dimmers

Universal dimmer switches are suitable for controlling LED and incandescent bulbs. They automatically change the dimming mode to either Leading Edge (LE) or Trailing Edge (TE) to suit the type of load connected.

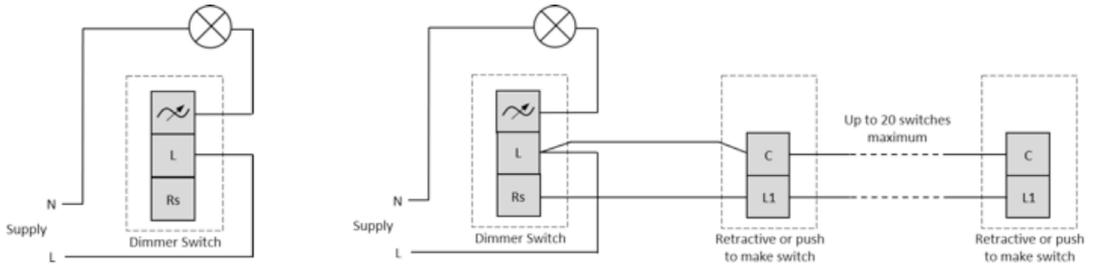

Multiway dimming can be achieved the Universal Dimmer by connecting up to 20 switches to allow dimming from all positions.

Universal Dimmers can operate loads from 3W up to 250W of dimmable LED lamps, and up to 350W for incandescent loads. Whilst the dimming mode changes automatically to suit the load, it can be manually reprogrammed from Leading Edge (LE) to Trailing Edge (TE) mode if compatibility issues are found when dimming LED lamps. In addition to this, the minimum dimming level can be set – see the instruction leaflet.

The maximum and minimum load, as well as the maximum number of lamps the dimmer can control will vary according to the make and type of LED lamp. Compatibility between the load and dimmer should be checked before installation.

Dimmer switches are available in Deta's Vimark, Vimark Curve, Slimline, Slimline Screwless, Slimline Décor, Ultra Flatplate and Ultra Screwless ranges in both 1g and 2g, and as a Gridswitch Module.

Universal Dimmer Wiring Diagram

Universal Gridswitch Dimmers

Dimmer switch modules in the Gridswitch range need to be de-rated when installed in multiple gang frontplates. Also, the dimmer switches must be installed in the lower rows of the frontplate. It is recommended that back boxes for dimmer switches are at least 40mm deep.

Dimmers in the bottom row should be de-rated to 75% of their maximum load. Dimmers in the second from bottom row should be de-rated to 50% of their maximum load, and dimmers in the third from bottom row should be de-rated to 50%. It is not advisable to install dimmers in the top row.

Dimmers

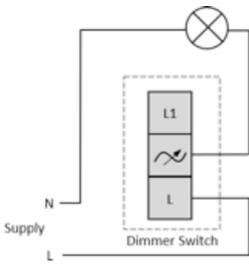

Trailing Edge Dimmers

Trailing Edge Dimmers are suitable for LED lamps requiring Trailing Edge Dimming technology, incandescent and low voltage lamps. Ideal for controlling the DETA range of Fire Rated Dimmable LED Downlights, the dimmer can control a minimum LED load from 5W to a maximum of 100W. For incandescent loads the dimmers have a maximum load of 250W.

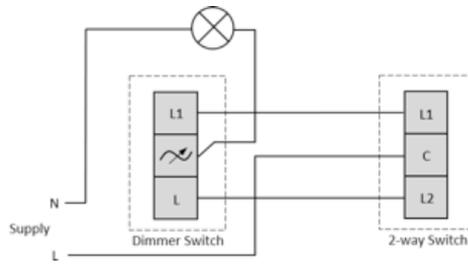

The trailing edge dimmers can be used in 2-way circuits, with a dimmer in one position and a standard switch in the other. The dimmer can be mechanically adjusted for minimum dimming level.

As with the Universal dimmers, the maximum and minimum load, as well as the maximum number of lamps the dimmer can control will vary according to make and type of LED lamp. Compatibility between the load and dimmer should be checked before installation.

Trailing Edge Dimmer Wiring Diagram

1-Way

2-Way

Dimmer Compatibility

The compatibility between the universal dimmer and load must be checked before installation. The number of light fittings as well as the total wattage will affect how well the dimmer performs. Therefore, the total number of light fittings that are planned to be controlled by the dimmer must be checked for compatibility. For optimum performance, all the LED lamps connected to the dimmer must be of the same brand and wattage.

Part M

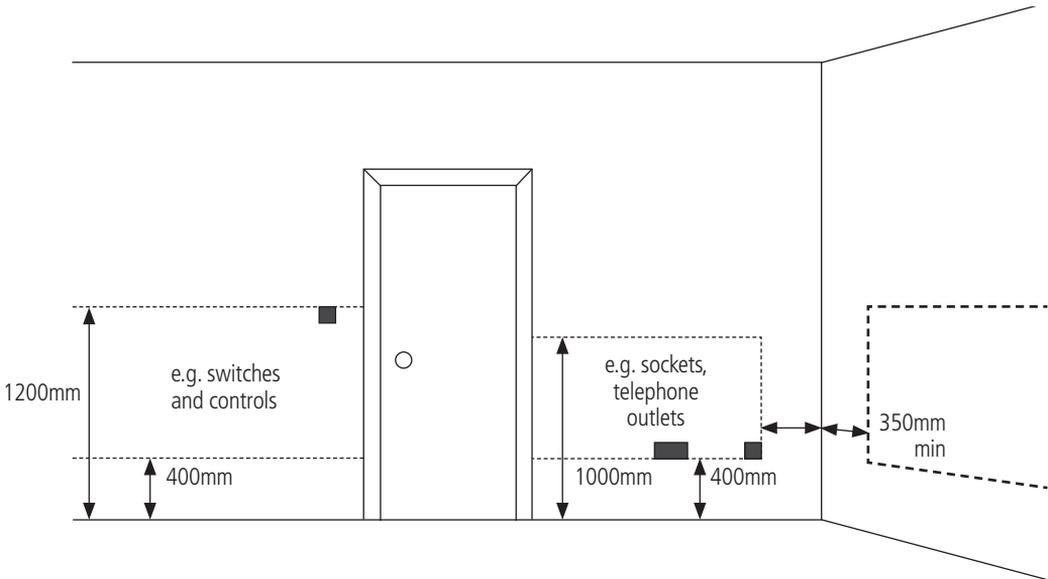

Building Regulation Approved Document M (commonly referred to as PART M) covers access to and use of buildings and facilities by disabled people.

Part M involves the provision of wide doorways, ramped access for wheelchairs, design of hand rails, stairwells and so on.

With respect to switches, outlets and controls there are design considerations that should be taken into consideration where the key factors are easy of operation, visibility, height and freedom of obstruction.

Users of switches, outlets and controls should be able to locate a control and know what setting it is on without inadvertently changing its setting. Controls which visually contrast with their surroundings are more convenient for visually impaired people, as are light switches that have large or wide rockers. It is preferable for switches on panels and multiple socket outlets to be well separated to avoid inadvertent operation.

Apart from the design of the switch, outlet or control, its position is important. The switches will satisfy requirement M1 where they are positioned between 400 and 1200mm from the floor, and between 900 and 1100mm for general public use. Whereas sockets should be mounted between 400 and 1000mm. Also, the switches should be an equal distance from the door frames and not closer than 350mm to the corners of rooms.

TV Systems

- TV Outlets or modules must not be installed in the same enclosure as mains voltage systems

There are different AV distribution systems available, each of which have different cabling and termination requirements. A terrestrial system may have an aerial feeding a single coax TV connection point. A slightly complex system may include a combination of aerial, satellite, broadband and radio inputs which are fed to their corresponding AV equipment such as a TV, a satellite receiver box or a radio set. Where multiple AV outlets are required multi-switches, splitters and amplifiers are used to distribute signal.

Isolated sockets are intended for use where safety isolation (rated at 2kV) is required to provide protection against faults within any mains powered product used on different parts of the distribution system. Therefore, isolated sockets are to be installed where multiple coaxial socket outlets are required.

Diplexer outlets are intended for use where both TV and FM/DAB signals are combined on a single download. The filter within the diplexer separates the appropriate signal and feeds them to the relevant output connection.

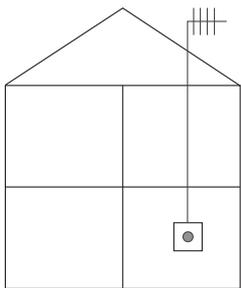

Triplexer outlets are intended for use where TV, FM/DAB and satellite signals are combined on a single download. The filter within the triplexer separates the appropriate signal and feeds them to the relevant output connection. The triplexer provides a DC control path in the SAT signal path.

Quadplexer outlets contain TV, FM/DAB and two satellite outlets and are intended for use with Sky+, or more complex installations.

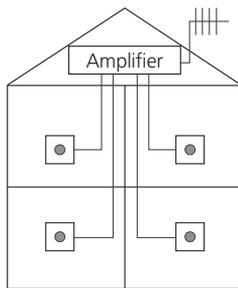

Sky Q – for installation in single dwellings, use two F-Type modules. For communal areas, the installation can be completed using a combination of a dSCR multi-switch and Deta's triplexer/quadplexer module.

A range of data plates and modules are also available in all Deta ranges, which allow the use of additional modules such as coaxial return sockets and telephone outlets for interactive TV applications.

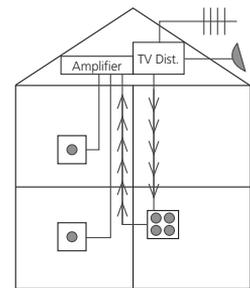

Typical Installations

Basic domestic installation where a non-isolated coaxial outlet is connected directly to the aerial.

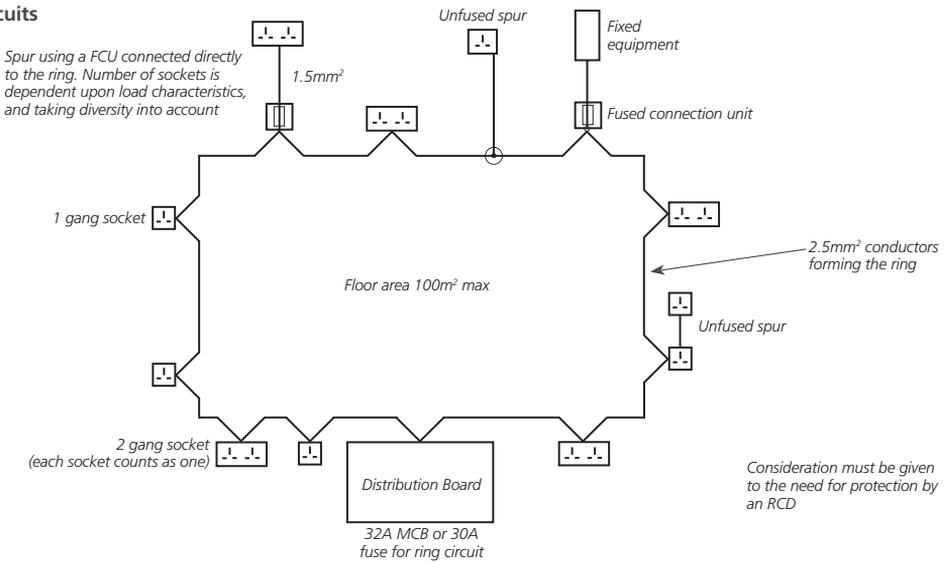

Communal aerial system, i.e. flats, hotels etc. where isolated coaxial outlets are wired separately to an amplifier.

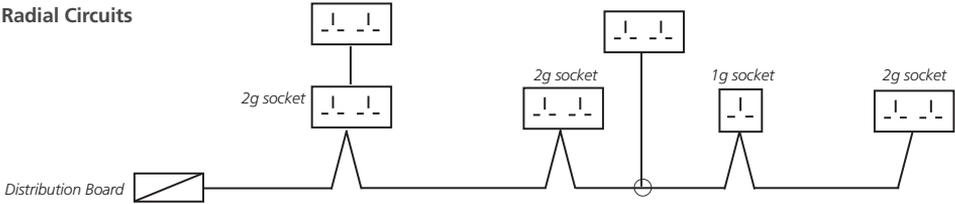

Domestic installation with satellite, including return feed for distribution to outlets in other rooms.

Final Ring Circuits

Final Radial Circuits

Final Circuits Using BS 1363 Socket-Outlets

Type of circuit	Overcurrent protective device		Minimum conductor size*		Maximum floor area served m ²
	Rating Amps	Type	Copper conductor Thermo-setting or PVC insulation mm ²	Copper conductor mineral insulated cables mm ²	
A1 Ring	30 or 32	Any	2.5	1.5	100
2 Radial	30 or 32	Cartridge fuse or circuit breaker	4	2.5	75
A3 Radial	20	Any	2.5	1.5	50

*The tabulated values of conductor size may be reduced for fused spurs

Refer to the IET Wiring Regulations (BS 7671) for a complete description of conventional circuit arrangements.

IP Ratings

The IP (international protection) rating given to an enclosure states the degree of protection it offers by means of two digits.

A summary of these is shown below; for a more detailed definition, see IEC 529: 1989, BS EN 60529: 1992.

First Digit

Protection against solid foreign objects and access to hazardous parts

The first digit covers protection against penetration by solid objects, which includes hands and tools such as screwdrivers. At the lowest of seven levels, 0, no protection is offered, either of the equipment itself from damage by intrusion or of a person contacting live or moving parts. At the highest, 6, there shall be no entry of dust.

Second Digit

Protection against ingress of water

The second digit covers the degree of protection against the entry of water, on a progressive scale. For example, number 1 indicates that dripping water shall have no harmful effect. Alternatively, number 6 indicates water projected in powerful jets against the enclosure from any direction shall have no harmful effects.

IP	
0	No protection
1	Protected against solid objects up to 50mm e.g. accidental touch by hands
2	Protected against solid objects up to 12mm, e.g. fingers
3	Protected against solid objects over 2.5mm, e.g. tools and wires
4	Protected against solid objects over 1mm, e.g. tools, wires and small wires
5	Protected against dust - limited ingress, no harmful deposits
6	Totally protected against dust

IP	
0	No protection
1	Protected against vertical falling drops of water, e.g. condensation
2	Protected against direct sprays of water up to 15° from the vertical
3	Protected against sprays of water up to 60° from the vertical
4	Protected against water splashed from all directions - limited ingress permitted
5	Protected against low pressure jets of water from all directions - limited ingress permitted
6	Protected against strong jets of water, e.g. for use on ship decks - limited ingress permitted

The letter X can be used in place of the first or second digit to indicate that tests have either not been made or are not applicable.

NOTE In the event of additional holes being drilled/pierced or knockouts removed, suitable measures should be taken to restore the products to the original ratings.

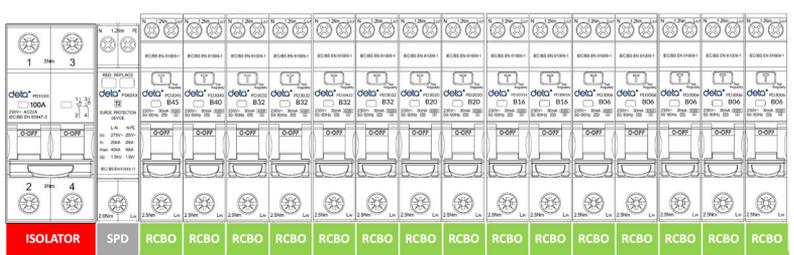

IEC 529, BS EN 60529 does not apply to protection against the risk of explosion or conditions such as humidity, corrosive gases, fungi or vermin. In certain cases equipment designed to be mounted in an enclosure will contribute towards the stated IP rating (e.g. pushbuttons mounted in an enclosure). Different parts of enclosures can have different degrees of protection and still conform to the standard (e.g. enclosures with pre-drilled conduit entry).

Enclosure Configurations

Mains Switch Enclosures

Depending on the enclosure size chosen, allows from 5 up to a maximum of 19 independent circuits to be connected. Intended for use with RCBOs and/or AFDD/RCBOs, each circuit is individually protected against both overload and earth leakage to prevent nuisance tripping originating from other circuits, providing the safest circuit protection solution.

A 100A rated Type 2 SPD is factory fitted and utilises the standard busbar terminal connection as all other devices.

Enclosure Size	Number of Outgoing Ways	
	Independent	
8 Module	5	
10 Module	7	
14 Module	11	
18 Module	15	
22 Module	19	

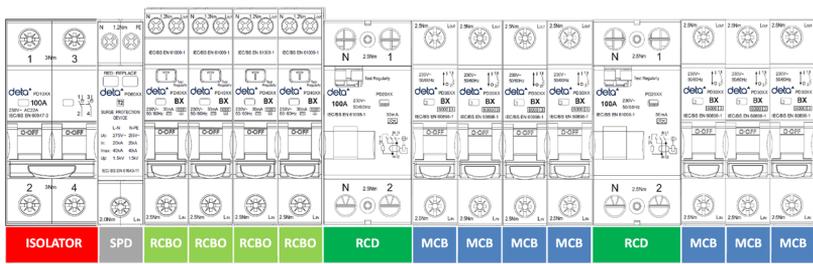

High Integrity Enclosures

Depending on the enclosure size chosen a number of independent circuits can be accommodated after the Main Switch with remaining circuits protected by two 100A 30mA Type A RCDs and MCBs. Enclosures are easily configured by sliding RCDs along the DIN rail depending on installation requirements.

A 100A rated Type 2 SPD is factory fitted and utilises the standard busbar terminal connection as all other devices.

Independent circuits using RCBOs or AFDD/RCBOs lend themselves to safety critical (e.g. safety alarms) and high risk (e.g. EV Charge Points) circuits, avoiding nuisance tripping whilst maximising protection.

Circuits protected by MCBs should be distributed across the two RCDs evenly with consideration given to circuit design. For example, downstairs and upstairs lighting circuits should be controlled by different RCDs to avoid a complete lighting outage if an earth leakage fault trips the connected RCD, cutting the supply to all the other connected circuits.

Enclosure Size	Number of Outgoing Ways			
	Independent	RCD 1	RCD 2	Total
18 Module	4 max.	6	5	11
22 Module	7 max.	8	7	15
32 Module	4 max.	11	14	25

Vimark

Steeped in over 25 years of history, Deta Electrical's long established Vimark brand holds a reputation for the supply of high quality, value for money electrical and wiring accessories. Offering a wide portfolio of products, including wiring accessories, motion sensors, ventilation, hand dryers, back boxes and electrosparcs, Vimark is a long established and trusted brand that supports electrical contractors with their everyday installation requirements.

TOWER TOWER

A long established brand, well regarded for its vast range of high quality installation materials, the trusted Tower brand represents an exciting addition to Deta's comprehensive brand portfolio. The Tower offer includes its highly acclaimed range of Installation Materials, including the original Tower Cable Clips, an 18th Edition Fire Rated range, Portable Power and Low Voltage Cable.

BRITICENT SITE ELECTRICS

Since its inception in 1908, Briticent Site Electrics has enjoyed more than 100 years of successful trading with a long-standing customer base. Briticent built its reputation on the Gripper® range of handlamps, and over the years has developed a core range of essential site lighting and power distribution products. Briticent continues to lead the way with new and innovative energy saving products, becoming the site lighting brand of choice amongst electrical installers throughout the UK and Ireland.

deta.e

Deta.e offers products that seamlessly combine Deta Electrical's core value of environmental preservation with its long established and trusted reputation for delivering high quality electrical products at competitive prices. Offering a range of smart, safe, and secure EV charge points, Deta.e embraces cutting edge technologies that offer sustainable solutions to assist homeowners and businesses in making an easy transition to a new energy efficient future. (deta-e.co.uk)

tte

TTE is a market leading brand of electrical conduit tube and fittings, combining the former Top Tubes Electrical and Stephen Glover businesses. With more than 50 years' experience, TTE has been specified and installed on many high-profile projects, including the London 2012 Olympic site, Wembley Stadium, Westfield Shopping Centre, Dubai International Airport and The Louvre Museum Abu Dhabi. TTE offers a reliable and best in class cable management solution that is fully compliant with British Standards.

Brackenheath

Established in 1978, Brackenheath is renowned for supplying high quality and competitively priced domestic and commercial lighting products. Through continuous investment in LED and sensing technologies, Brackenheath pioneered the design of its market leading iSpot® range of slim profile, driverless LED Floodlights and continues to lead the way in bringing to market new and innovative LED lighting solutions.

CHANNEL

Established in 1976, Channel is a leading manufacturer of emergency LED lighting and safety systems and a key distributor of the UK's leading brands for fire detection solutions. Renowned for the breadth and depth of each product range, Channel has gained a loyal customer base driven by an excellence in technical and customer support. Proud to be affiliated with ICEL, LIA and EDA, Channel are registered with BSI and are members of the Apollo Partner Plus programme.

TIMEGUARD®

A trusted UK industry leader synonymous with quality and innovation, Timeguard has more than 25 years' experience in the manufacture and sale of time, light, safety, wi-fi and climate control electrical products. Continuously delivering energy savings that owners and occupiers are looking for, alongside the creation of new designs that offer easy installation, Timeguard has become a favourite among homeowners and installers.
