

- Use your devices charging wattage and voltage and check it is suitable for use using the table below.
- Do not exceed maximum wattage when charging multiple devices. Refer to 'USB Output' in below table for details.

For example, a 15.0W Max using two ports will charge one 7.5W USB-A device and one 7.5W USB-C device, but will not charge 2 x 10.0W devices.

- This USB Charger is compatible with portable devices such as smart phones, tablets and other such devices that require charging via a USB Type A and Type C ports.
- Easily charge multiple devices simultaneously using intelligent charging technology. Programmable Power Supply (PPS) charging prolongs battery life and makes charging more efficient.
- Charging will be slower when multiple devices are being charged.
