Push wire® splicing connector, 243 Series, yellow

Our push wire® splicing connector (item number 243-508) is designed for seamless electrical installations. Our 243 Series provides MICRO PUSH WIRE® connectors for junction boxes that are ideal for low-voltage installations in buildings. Regardless of whether you're wiring doorbells or intercom systems, our MICRO PUSH WIRE® connectors for junction boxes are the perfect size for these types of installations. Ensure that the strip lengths are between 5 and 6 mm when connecting conductors to push wire® splicing connector. Rated current and voltage are important parameters when choosing a splicing connector, as they determine the product's suitability for different applications. This product has a rated voltage of 100 V and a rated current of 6 A. This product features one conductor terminal and utilizes PUSH WIRE®. Our PUSH WIRE® connection uses the stiffness of the conductor to overcome the clamping spring's contact force, allowing faster and easier conductor clamping. The item's dimensions are (18.4 x 6.8 x 10) mm (width x height x depth).

Testing

Testing via test port opposite to conductor entry.

The 243 Series can be used in both communication and alarm systems according to the VdS (German Association of Property Insurers) guidelines.

No general approval is given to PUSH WIRE® connectors by the VdS association. The connectors must be tested together with the different parts of the system.
The requirements for connectors are specified in the VdS guidelines for junction boxes (VdS 2116) in section 8.7: "The junction box connectors must be designed to guarantee a reliable and stable connection."

The verification of the fulfillment of these requirements is documented in the VDE test report No. 2574-1440-4031 for the insulated 243 Series PUSH WIRE® Connectors.
