For easily testing terminal block assemblies, WAGO's L-type test plug modules with CAGE CLAMP® may be used on unwired terminal blocks. For testing, the module is assembled with spring-loaded pins in the center positions and rigid pin modules at the ends. The terminal blocks corresponding to the end position modules are opened using operating tools (as shown) – these rigid pins are then held in place by the CAGE CLAMP®.
The intermediate pins are spring-loaded and make contact with the current bars of the unwired clamping units.
Clamping units needing to remain wired may be skipped by assembling a spacer in the test plug module.
Notice:
Mating direction must be observed (see picture).
