

# The HVK BIO Knife. A sustainable choice.

HVK BIO is an eco-conscious version of our craftsman's knife, with an innovative new handle and about 15% less plastic.

  
**Hultafors**

# Our classic craftsman's knife goes green.

Delivering 100% of the performance of our popular HVK Craftsman's knife, the HVK BIO Knife uses over 80% bio-based plastic, and less plastic overall.

## NEWS'21

### CRAFTSMAN'S KNIFE HVK BIO

A more sustainable option to our popular craftsman's knife. The handle is produced in bio-based plastic and with a unique design we have also managed to save material in the handle. All in all, this reduces the environmental impact. The handle has a hole for a strap, to enable you to secure the knife when working at heights. The blade is made from 2.5 mm carbon steel that has been hardened to 58 – 60 HRC. The knife is also available with a paper sleeve to enable reuse of your existing holster and to reduce the climate footprint even more. HVK BIO has the same strength and durability as the rest of our craftsman's knives.

- Material saving in the handle to reduce environmental impact.
- The handle is made from extra durable bio-based HDPE-plastic.
- Hole in handle for tool securing.
- HVK BIO – PH is delivered with a paper sleeve instead of holster.
- The cutting edge is sharpened in several stages, with a final honing on a leather strop.
