T8 LED tube

Retrofitting a CCG luminaire (according to EN62776)

- The fluorescent T8 lamp needs to be replaced by the Opple T8 LED tube and the fluorescent starter needs to be replaced with a LED starter.
- The built in CCG can be used as it is and existing certifications remain valid. Its losses are reduced to ohmic losses of around 1W.
- Opple T8 tube can be used in luminaires with integrated compensating capacitors.
- Opple T8 tube has single-ended connection. Power input is at the side with the Opple logo.

NOTE: If the fluorescent starter hasn't been changed with the LED starter, the luminaire will blink. Please switch it off and change the starter, otherwise the LED tube may be damaged. Opple T8 LED tube can only be used in luminaires with changeable starters.

- Double lamp diagram

Important Notes

- Rework by qualified electricians only.
- Make sure that the supply voltage is disconnected.
- Remove the conventional lamp.
- Remove power correction capacitor (if any) to improve power factor.
- Rewire the luminaire as shown on the diagrams.
- Insert T8 LED tube into lamp holders and check light distribution angles.
- Make sure with that the rewired luminaire complies to all safety requirements.
- Do not insert fluorescent lamps, the lamps would break down and damage the luminaire.
- Responsibility of technical and safety consequences of the converted luminaire is with the installer carrying out the replacement.

OPPLE T8 tube is designed for use in standard IEC compliant G13 bi-pin lamp holder only.
No modifications to be made to the luminaire in which the LED lamp is used .
This lamp is designed for general lighting service (excluding for example explosion proof applications).
